Syllabus of 3rd Year

V & VI SEMESTER

Department of Electrical & Electronics Engineering

College Calendar 2023-24

**मातेव रक्षति पितेव हिते नियुङ्क्ते
कान्तेव चापि रमयत्यपनीय खेदम् ।
लक्ष्मीं तनोति वितनोति च दिक्षु कीर्तिं
किं किं न साधयति कल्पलतेव विद्या ॥**

ಮಾತೇವ ರಕ್ಷತಿ ಪಿತೇವ ಹಿತೇ ನಿಯುಂಕ್ತೇ
ಕಾಂತೇವ ಚಾಪಿ ರಮಯತ್ಯಪನೀಯ ಖೇದಮ್ ।
ಲಕ್ಷ್ಮೀಂ ತನೋತಿ ವಿತನೋತಿ ಚ ದಿಕ್ಷು ಕೀರ್ತಿಂ
ಕಿಂ ಕಿಂ ನ ಸಾಧಯತಿ ಕಲ್ಪಲತೇವ ವಿದ್ಯಾ ॥

ತಾಯಿಯಂತೆ ರಕ್ಷಣೆಯನ್ನಿತ್ತು, ತಂದೆಯಂತೆ ಸನ್ಮಾರ್ಗದಲ್ಲಿ ತೊಡಗಿಸಿ ಪತ್ನಿಯಂತೆ ದುಃಖವನ್ನು ದೂರಮಾಡಿ ಮನಕ್ಕೆ ಮುದಕೊಡುತ್ತಾ, ಸಂಪತ್ತನ್ನು ವರ್ಧಿಸಿ ದಶದಿಕ್ಕುಗಳಲ್ಲಿ ಕೀರ್ತಿಯನ್ನು ಪಸರಿಸುವ 'ವಿದ್ಯೆ', ಕಲ್ಪಲತೆಯಂತೆ ನಾವು ಬಯಸಿದ್ದನ್ನು ಕೊಡುತ್ತಾಳೆ.

विद्या माता की तरह पालन करती है, बाप के तरह हितकर मार्ग में ही ले लेता है। पत्नी की तरह हमारा दुःख दूर करता है। मन को संतोष देता है, धन देती है, दिशाओं में कीर्ति फैलाती है। कल्पवल्ली की तरह वह सब कामनाये पूरी करती है।

Do you know in how many ways the 'Knowledge' serves his master? Like mother it protects, like father it teaches and guides, like wife, provides all kinds of happiness after destroying all sorrows, it brings wealth from every corner and spreads the fame in all direction. Like 'Kalpalatha' knowledge offers everything to human being whatever he wishes.

**REGULATIONS COMMON TO ALL B.E. (CREDIT SYSTEM) DEGREE
PROGRAMMES OF
NMAM INSTITUTE OF TECHNOLOGY, NITTE
Karkala, Udupi Dist., Karnataka**

1. INTRODUCTION

- 1.1 The general regulations are common to all B.E. (Credit System) Degree Programmes conducted at the NMAMIT, Nitte Campus and shall be called "NMAMIT Regulations".
- 1.2 The provisions contained in this set of regulations govern the policies and procedures on the Registration of students, imparting Instructions of course, conduct of the examination and evaluation and certification of student's performance and all amendments related to the said Degree programme(s).
- 1.3 This set of Regulations, on approval by the Academic Council and Governing Council, shall supersede all the corresponding earlier sets of regulations of the BE Degree program (of VTU) along with all the amendments thereto, and shall be binding on all students undergoing the Graduate Degree Programme(s) (Credit System) conducted at the NMAMIT, Nitte with effect from its date of approval. **This set of Regulations, may evolve and get modified or changed through appropriate approvals from the Academic Council / Governing Council from time to time, and shall be binding on all stake holders (The Students, Faculty, Staff of Departments of NMAMIT, Nitte). The decision of the Academic Council/ Governing Council shall be final and binding.**
- 1.4 In order to guarantee fairness and justice to the parties concerned in view of the periodic evolutionary refinements, any specific issues or matters of concern shall be addressed separately, by the appropriate authorities, as and when found necessary.
- 1.5 The Academic Council may consider any issues or matters of Concern relating to any or all the academic activities of NMAMIT courses for appropriate action, irrespective of whether a reference is made here in

this set of Regulations or otherwise.

- 1.6 The course shall be called **Bachelor of Engineering** course abbreviated as B.E. (Subject of specialization) – Credit System.

1.7 DURATION OF THE COURSE

- (a) The course shall extend over a period of total duration of 4 years.
- (b) Each year shall have the following schedule with **5 ½** days a week.
- Suggested Break down of Academic Year into Semesters

1. No. of Semesters / Year	Three; Two being Main semesters (odd, even) and one being a supplementary semester; after 2 main semesters. (Note: Supplementary semester is primarily to assist weak and / or failed students through make up courses. However, Autonomous Colleges may use this semester to arrange Add-On courses for other students and / or for deputing them for practical training elsewhere.)
2. Semester Duration	Main semester (odd, even) each 19 Weeks; Supplementary Semester 8 Weeks
3. Academic Activities	Main Semester
(Weeks):	Registration of Courses & Course Work (16.0) Examination Preparation and Examination (3.0) Total (19) Supplementary Semester Registration of Courses & Course Work (5.0)

	<p>Examination Preparation and Examination (3.0)</p> <p>Total (8)</p> <p>Declaration of results: 2 weeks from the date of last examination</p> <p>Inter- Semester Recess:</p> <p>After each Main Semester (2)</p> <p>Total Vacation: 10 weeks (for those who do not register for supplementary semester) and 4 weeks (for those who register for supplementary semester)</p>
--	--

(Note: In each semester, there will be provision for students for Registration of courses at the beginning, dropping of courses in the middle and withdrawal from courses towards the end, under the advice of faculty member. These facilities are expected to enhance the learning capabilities of students, minimizing their chances of failure in courses registered and also ensure their better monitoring by Faculty Advisors).

A candidate shall be allowed a maximum duration of eight years from the first semester of admission to become eligible for the award of Bachelor Degree.

The calendar of events in respect of the course shall be fixed by the Senate from time to time, but preferably in line with the academic calendar of the VTU.

2. DEGREE PROGRAMMES

2.1 Undergraduate B.E. Degree Programmes are offered in the following disciplines by the respective programme hosting departments listed below:

- i) **Biotechnology Engineering** (BT)
- ii) **Civil Engineering** (CV)
- iii) **Computer Science & Engineering** (CS)
- iv) **Electronics & Communications Engineering** (EC)
- v) **Electrical & Electronics Engineering** (EE)
- vi) **Information Science & Engineering** (IS)
- vii) **Mechanical Engineering** (ME)
- viii) **Artificial Intelligence and Machine Learning Engg.** (AM)
- ix) **Computer and communication Engineering** (CC)
- x) **Robotics and Artificial Intelligence Engineering** (RA)

Other teaching departments are –

- | | | |
|------|---|-------------|
| i) | Mathematics | (MA) |
| ii) | Physics | (PH) |
| iii) | Chemistry | (CY) |
| iv) | Humanities, Social Sciences and Management | (HU) |

- 2.2 The provisions of these Regulations shall be applicable to any new discipline* that may be introduced from time to time and appended to the above list.

3. **REGISTRATION**

- 3.1 Every student after consulting his Faculty Advisor in parent department shall register approved courses (core and elective) to earn credits for meeting the requirements of degree program at the commencement of each Semester on the days fixed for such registration and notified in the academic calendar. Students who fail to register on or before the specified date will have to pay a late fee. Such courses together with their grade and credits earned will be included in the grade card issued by the college at the end of each semester, like odd, even, supplementary and it forms the basis for determining the student's performance in that semester.

3.2 **Lower and Upper Limits for Course Credits Registered in a Semester Course Credit Assignment**

All courses comprise of specific Lecture/Tutorial/Practical (L-T-P) schedule. The course credits are fixed based on the following norms.

Lecture / Tutorials / Practical:

- i) One hour Lecture per week is assigned one Credit.
- ii) 2-hour Tutorial session per week is assigned 1.0 Credit.
- iii) 2-hour Lab. session per week is assigned 1.0 credit.

For example, a theory course with L-T-P schedule of 3-2-0 Hours will be assigned 4.0 credits.

A laboratory practical course with L-T-P schedule of 0-0-2 Hours will be assigned 1.0 credit.

Calculation of Contact Hours / Week – A Typical Example

A student must register, as advised by Faculty Advisor, between a minimum of 15 credits and up to a Maximum of 25 credits.

3.3 **Mandatory Pre-Registration for higher semester**

In order to facilitate proper planning of the academic activities of the Semester, it is necessary for the students to declare their intention to register for courses of higher semesters (3rd and above) at least two weeks before the end of the current semester choosing the courses offered by each department in the next higher semester which is displayed on the Department Notice Board at least 4 weeks prior to the last working day of the semester.

Registration to a higher semester is allowed only if the student fulfills the following conditions -

- i) satisfied all the academic requirements to continue with the programme of studies without termination
- ii) cleared all Institute, hostel and library dues and fines, if any, of the previous semester
- iii) paid all required advance payments of the Institute and the hostel for the current semester
- iv) has not been debarred from registering on any specific grounds by the Institute.

4. **ADD / DROP / AUDIT options**

4.1 **Registration of courses**

Each student shall have to register for course work at the beginning of a semester within 2 to 3 days of commencement after discussing with subject teacher and under faculty advice. The permissible course load to be either average credits (=20) or to be within the limits of minimum (=15) and maximum (=25) credits.

4.2 **DROP-option**

During a specified period at the middle of a semester student's performance in CIE is reviewed by the faculty advisor. Following poor performance by a student he/she can be facilitated to drop identified course(s) (up to the minimum credits specified for the semester). Such course(s) will not be mentioned in the Grade card. Such courses to be re-registered by these students and taken up for study at a later time.

4.3 **Withdrawal from courses**

During a specific period specified towards the end of the semester, student's performance in CIE is reviewed by the Faculty advisors. Following poor

performance by a student in identified course (s) he/she is advised to withdraw from such course(s) (up to the minimum credits specified for the semester) with mention in the Grade card (Grade 'W'). Such courses to be re-registered by these students and taken up for study at a later time.

4.4 **AUDIT-option**

A student can register for courses for audit only, with a view to supplement his/her knowledge and/or skills. The student's grades in such course(s) will have to be reflected in the grade card. However, CORE courses shall not be made available for audit. But these shall not be taken into account in determining the student's academic performance in the semester. 'U' grade is awarded to such courses on satisfying the attendance requirements and CIE requirements. The candidate need not appear for SEE in such courses.

5. **COURSE STRUCTURE:**

5.1 **Typical Breakdown for the B.E. Degree Curriculum:**

No.	Course Category	Credit Range
1.	Basic Science Courses	20-25
2.	Engineering Science Courses	18-22
3.	Humanity, Social Science and Management	8-12
4.	Ability Enhancement Courses	10-14
5.	Professional Core Courses (PCC)	40-45
6.	Professional Elective Courses (PEC)	8-12
7.	Open Elective Courses (OE)	8-12
8.	Skill Courses (Project Work / Internship / Seminar)	28-36
9.	Mandatory courses	2
Note: Student can register between 15 to 25 credits per semester Total Credits to be earned : 160		

5.2 The Department Undergraduate Committee (DUGC) will discuss and recommend the exact credits offered for the programme for the above components, the semester wise distribution among them, as well as the

syllabi of all undergraduate courses offered by the department from time to time before sending the same to the Board of Studies(BOS). The BOS will consider the proposals from the departments and make recommendations to the senate for consideration and approval.

5.3 **The earned Credit Requirement for the B.E. Degree is 160.**

Degree is awarded by prescribing the total number of credits to be earned, rather than by using the program duration, giving flexibility to student to plan their career.

5.4 **Mandatory Learning Courses**

These are courses that must be completed by the student at appropriate time or at his convenience. The 'PP' grade is awarded for a Pass in the course and 'NP' grade is awarded for a Fail in the course. In case 'NP' grade is awarded, the student has to re- register for the same course wherein he has no alternative options. However, he/she can opt for other courses if he/she has been provided with multiple options.

The 'PP' and 'NP' grades do not carry grade points and hence not included in the Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA) computations. However such non-credit mandatory courses are required to be included in the students' performance record (transcript) with Pass or Fail (PP or NP).

Courses that come under this category are the following.

Moral and Ethical Values, Communication skills, Entrepreneurship Development Programme, Environmental issues, Proficiency in a Language etc.

Such courses will not carry any credits for the award of degree, but a pass in each of such course during the programme shall be a necessary requirement for the student to qualify for degree award.

5.5 **PROJECT**

- i) Project work at 7th semester shall be completed batch wise. The batch shall consist of a maximum of 4 students.
- ii) Project viva-voce examination shall be conducted individually.

5.6 ELECTIVES

- i) A candidate shall take electives in each semester from groups of electives, commencing from 6th semester.
- ii) The minimum number of students to be registered for any Elective offered shall not be less than ten.
- iii) A candidate shall opt for his/her choice of electives and register for the same if pre-registration is not done, at the beginning of each of 6th & 7th semesters. The candidate is permitted to opt for change of elective within 15 days from the date of commencement of the semester as per the academic calendar of the college.

6. ATTENDANCE REQUIREMENT:

- 6.1 Each semester is considered as a UNIT and the candidate has to put in a minimum attendance of 85% in each subject with a provision of condoning 10% of the attendance by Principal for reasons such as medical grounds, participation in University level sports, cultural activities, seminars, workshops and paper presentation.
- 6.2 The basis for the calculation of the attendance shall be the period of term prescribed by the College by its calendar of events. For the first semester students, the same is reckoned from the date of admission to the course (as per CET/COMED-K or Management allotment).
- 6.3 The students shall be informed about their attendance position in the first week of every month by the College so that the students shall be cautioned to make up the shortage.
- 6.4 A candidate having shortage of attendance (<75%) in any course(s) registered shall not be allowed to appear for SEE of such course(s). Such students will be awarded 'N' grade in these courses.
He/she shall have to repeat those course(s). Such students shall re-register for the same course(s) core or elective, as the case may be when the particular course is offered next either in a main (odd/even) or supplementary semester.
- 6.5 **Attendance in CIE and SEE:** Attendance at all examinations both CIE and SEE of each course registered shall be compulsory and there shall not be any provision for re-examinations. Any student against whom any disciplinary action is pending shall not be permitted to attend any SEE in that semester.

7. **WITHDRAWAL FROM THE PROGRAMME**

7.1 **Temporary Withdrawal**

- a) A student who has been admitted to a degree programme of the college may be permitted once during the course to withdraw temporarily, for a period of one semester, on the grounds of prolonged illness or grave calamity in the family etc., provided –
- i) The student applies to the College within 6 weeks of the commencement of the college stating fully the reasons for withdrawal together with supporting documents and endorsement from his parent/guardian.
 - ii) The College is satisfied about the genuineness of the case and that even by taking into account the expected period of withdrawal, the student has the possibility to complete the programme requirements (160 credits) within the time limits specified by the university.
 - iii) The student does not have any dues or demands at the College / University including tuition and other fees as well as library material.
 - iv) A student availing of temporary withdrawal shall be required to pay such fees and/or charges as may be fixed by the college until such time as his/her name appears on the Student's roll list. The fees/charges once paid shall not be refunded.
 - v) A student will be entitled to avail the temporary withdrawal facility only once during his/her studentship. However, any other concession for the concerned student shall have to be approved by the academic council.

7.2 **Permanent Withdrawal**

Any student who withdraws admission before the closing date of admission for the Academic Session is eligible for the refund of the deposits only. Fees once paid will not be refunded on any account.

Once the admission for the year is closed, the following conditions govern withdrawal of admissions.

- (a) A student who wants to leave the College for good, will be permitted to do so (and take Transfer Certificate from the College, if needed), only after remitting the Tuition fees as applicable for all the remaining semesters

and clearing all other dues if any.

- (b) Those students who have received any scholarship, stipend or other forms of assistance from the College shall repay all such amounts.
- (c) The decision of the Principal of the College regarding withdrawal of a student is final and binding.

8. **EVALUATION SYSTEM**

- 8.1 The Academic Performance Evaluation of a student shall be according to a Letter Grading System, based on the Class Performance Distribution.
- 8.2 The Letter grades S, A, B, C, D, E, F indicate the level of academic achievement, assessed on a decimal (0-10) scale.
- 8.3 The Letter grade awarded to a student in a course, for which he has registered shall be based on his performance in quizzes, tutorials, assignments etc., as applicable, in addition to two mid- semester examinations and one semester end examination. The distribution of weightage among these components may be as follows.

Semester End Examination (SEE) : 50% (50 marks)

Continuous Internal Evaluation (CIE) : 50% (50 marks)

- i) Quizzes, Tutorials, Assignments,
Seminars, mini projects, tutorials etc. : 10 marks
- ii) Mid-semester Examination : 40 marks

Any variation, other than the above distribution, requires the approval of the pertinent DUGC and Academic Council.

- 8.4 The letter grade awarded to a student in a 0-0-P (Practical) course, is based on an appropriate continuous evaluation scheme that the course instructor shall evolve, with the approval of the pertinent DUGC and the performance in SEE held on specified period in a semester.
- 8.5 The course Instructor shall announce in the class and/or display at the Faculty door/website the details of the Evaluation Scheme, including the distribution of the weightage for each of the components and method of conversion from the raw scores to the letter-grades within the first week of the semester in which the course is offered, so that there are no ambiguities in communicating the same to all the students concerned.

8.6 Passing standards

Evaluation Method	Passing Standard
Sessional (CIE)	Score: $\geq 40\%$ (≥ 20 marks)
Terminal (SEE)	Score: $\geq 40\%$ (≥ 20 marks)

- i) Project work evaluation: The evaluation of CIE of the project work shall be based on the progress of the student in the work assigned by the project supervisor, periodically evaluated by him/her together with a Department committee constituted for this purpose. Seminar presentation, project report and final oral examination conducted by project evaluation committee at the department level shall form the SEE of the project work.
- ii) In the case of other requirements, such as, seminar, industrial internship, field work, comprehensive viva voce, if any, the assessment shall be made as laid down by the Academic council.
- iii) **There shall be no re-examination for any course in the credit system.**

However, students

- who have abstained from attending CIE or SEE without valid reasons ('N' grade), or
- who have failed ('F' grade) to meet the minimum passing standards prescribed for CIE and/or SEE, or
- who have been detained for want of attendance, or
- who have withdrawn ('W' grade),
- who have dropped any course

shall be required to re-register for such course(s) and go through CIE and SEE again and obtain a grade equal to or better than E in each case. While such students should re-register for same course(s) if core, they can re-register for alternative course(s) from among the elective courses, as the case may be. The re- registration shall be possible when the particular course is offered again either in a main (Odd/Even) or a supplementary semester.

8.7

i) Grade point scale for absolute grading

Level	Out Standing	Excellent	Very Good	Good	Average	Poor	Fail
Grade	S	A	B	C	D	E	F
Grade Points	10	09	08	07	06	04	00
Score (Marks) Range(%)	≥ 90	$< 90 - \geq 80$	$< 80 - \geq 70$	$< 70 - \geq 60$	$< 60 - \geq 50$	$< 50 - \geq 40$	< 40

- ii) The grade points given above help in the evaluation of credit points earned by the student in a course as the credit points are equal to the number of credits assigned to the course multiplied by the grade points awarded to the student in that course. This shall be used in arriving at the credit index of the student for that semester, as it is the sum total of all the credit points earned by the student for all the courses registered in that semester.

8.8 Earning of Credits

A student shall be considered to have completed a course successfully and earned the credits if he/she secures an acceptable letter grade in the range S-E. Letter grade 'F' in any course implies failure of the student in that course and no credits earned.

- 8.9** The Transitional Grades 'I', 'W' and 'X' would be awarded by the teachers in the following cases. These would be converted into one or the other of the letter grades (S-F) after the student completes the course requirements.

- ♦ Grade 'I': To a student having satisfactory attendance at classes and meeting the passing standard at CIE, but remained absent from SEE for valid & convincing reasons acceptable to the College, like:
 - i) Illness or accident, which disabled him/her from attending SEE;
 - ii) A calamity in the family at the time of SEE, which required the student to be away from the College;
- ♦ Students who remain absent for Semester End Examinations due to valid reasons and those who are absent due to health reasons are required to submit the necessary documents along with their request to the Controller

of Examinations to write Make up Examinations within 2 working days of that particular examination for which he or she is absent, failing which they will not be given permission. This is admissible only for students who have more than 45 CIE marks.

- ♦ Grade 'W': To a student having satisfactory attendance at classes, but withdrawing from that course before the prescribed date in a semester under Faculty Advice
- ♦ Grade 'X': To a student having attendance $\geq 85\%$ and CIE rating (90%), in a course but SEE performance observed to be poor, which could result in a F grade in the course. **(No 'F' grade awarded in this case but student's performance record maintained separately).**

8.10 Grade Card

Each student shall be issued a Grade Card at the end of each semester. This will have a list of all the courses registered by a student in the semester, together with their credits, the letter grades with grade points awarded. Only those courses registered for credit and having grade points shall be included in the computation of the students performance like SGPA and CGPA and the courses taken for audit will not form part of this computation. The results of mandatory courses, which are of the non-credit type shall also be reflected in the Grade card as PP (for Passed) or NP (for not passed). **Each UG student shall have to obtain the grade PP in each mandatory course to qualify for the Degree awarded by the university.**

8.11 The Make Up Examination

The Make Up Examination facility would be available to students who may have missed to attend the SEE of one or more course(s) in a semester for valid reasons and given the 'I' grade; Also, students having the 'X' grade shall be eligible to take advantage of this facility. The makeup examination would be held as per dates notified in the Academic Calendar. However, it would be possible to hold a makeup examination at any other time in the semester with the permission of the Academic Council of the College. In all these cases, the standard of makeup examinations shall be same as the regular SEE for the course(s).

- a) All the 'I' and 'X' grades awarded to the students would be converted to appropriate letter grades after the make-up examinations. Any

outstanding 'I' and 'X' grades after the last scheduled make-up examinations shall be automatically converted to 'F' grade.

- b) All the 'W' grades awarded to the students would be eligible for conversion to the appropriate letter grades only after the concerned students re-register for these courses in a main/ supplementary semester and fulfill the passing standards for their CIE and (CIE+SEE).

9. EVALUATION OF PERFORMANCE

The overall performance of a student will be indicated by two indices: SGPA; which is the Semester Grade Point Average, and CGPA which is the Cumulative Grade Point Average.

SGPA for a semester is computed as follows.

$$\text{SGPA} = \frac{\sum [(\text{course credit}) \times (\text{Grade point})] \text{ (for all courses in that semester)}}{\sum [(\text{course credits})]}$$

CGPA is computed as follows:

$$\text{CGPA} = \frac{\sum [(\text{course credits}) \times (\text{Grade points})] \text{ (for all courses excluding those with F grades until that semester)}}{\sum [(\text{course credits})] \text{ (for all courses excluding those with F grades until that semester)}}$$

10. COMMUNICATION OF GRADES

The SGPA and CGPA respectively, facilitate the declaration of academic performance of a student at the end of a semester and at the end of successive semesters. Both of them would be normally calculated to the second decimal position.

11. VERTICAL PROGRESSION (PROMOTION / ELIGIBILITY TO HIGHER SEMESTERS)

- 11.1 There shall be no restriction for promotion from an odd semester to the next even semester, provided the student has fulfilled the attendance requirement.

11.2 A Student shall be declared fail if he / she

- (i) Has not satisfied the CIE requirements of any Course/s.
- (ii) Has not registered for the SEE even after satisfying the attendance and CIE requirements.

11.3 (A) Vertical Progression in case of students admitted to First year:

- (a) Students having not more than four F grades in the two semesters of first year of the Programme shall be eligible to move to second year.
- (a.1) Students having not more than four F grades in the four semesters of I and II year shall be eligible to move to III year.
- (a.2) Students who have earned all the prescribed credits of I year, and having not more than four grades in the four semesters of II and III year shall be eligible to move to IV year.

(B) Vertical Progression in case of Diploma students admitted to Second year (lateral entry):

- (a) Students having not more than four F grades (excluding the Fail or pass status of Additional Mathematics I and II) in the two semesters of II year of the Programme shall be eligible to move to III Year.
- (a.1) Students having not more than four F grades (excluding the Fail or pass status of Additional Mathematics I and II, if any) in the four semesters of II and III year shall be eligible to move to IV year.
- (b) The mandatory non-credit Courses Additional Mathematics I and II prescribed at III and IV semesters respectively, to lateral entry Diploma holders admitted to III semester of B.E/B.Tech. Programmes shall attend the classes during the respective semesters to satisfy attendance and CIE requirements and to appear for the University examinations.
- (b.1) In case, any student fails to satisfy the attendance requirement of the Courses Additional Mathematics I and II, he/she shall not be eligible to appear for the Semester End Examinations of that semester and shall not be permitted to take admission to next higher semester. The candidate shall be required to repeat that semester during the subsequent year.
- (b.2) Students who have satisfied the attendance requirement but not the CIE requirements of the Courses Additional Mathematics I and II shall be permitted to register afresh and appear for SEE after satisfying the CIE requirements in the same Course/s (with or without satisfying the attendance requirement) when offered during subsequent semester/s.

- (c) Completion of Additional Mathematics I and II shall be mandatory for the award of degree.

(C) Vertical Progression in case of B.Sc students admitted to Second year (Lateral entry):

- (a) Students having not more than four F grades (excluding the Fail or pass status of Engineering Graphics and Elements of Civil Engineering and Mechanics of First Year Engineering Programme) in the two semesters of II year of the Programme shall be eligible to move to III year.
 - (a.1) Students having not more than four F grades (excluding the Fail or pass status of Engineering Graphics and Elements of Civil Engineering and Mechanics of First Year Engineering Programme, if any) in the four semesters of II and III year shall be eligible to move to IV year.
- (b) The prescribed mandatory non-credit Courses Engineering Graphics and Elements of Civil Engineering and Mechanics of First Year Engineering Programme to lateral entry B. Sc holders admitted to III semester of B.E/B. Tech Programmes, shall attend the classes during the respective semesters to complete CIE and attendance requirements and to appear for the University examinations.
 - (b.1) In case, any student fails to satisfy the attendance requirement of the above said Courses; he/she shall not be eligible to appear for the Semester End Examinations of that semester and shall not be permitted to take admission to next higher semester. The candidate shall be required to repeat that semester during the subsequent year.
 - (b.2) Students who have satisfied the attendance requirement but not the CIE requirements of the above said Courses, shall be permitted to register afresh and appear for SEE after satisfying the CIE requirements in the same Course/s (with or without satisfying the attendance requirement) when offered during subsequent semester/s.
- (c) Completion of Engineering Graphics and Elements of Civil Engineering and Mechanics shall be mandatory for the award of degree.

The Principal of each college shall make suitable arrangements in the timetable to facilitate the B. Sc students to attend the above mentioned courses to satisfy the CIE and attendance requirements and to appear for the University examinations.

11.4 Termination from the programme

A student shall be required to withdraw (discontinue) from the programme and leave the college on the following grounds.

- i) **Failure to secure a CGPA = 5.0 on three consecutive occasions.**
- ii) **Failure to earn a credit of 160 (120 for lateral entry students) in**

8 years (6 years for lateral entry students) of duration from the year of admission including the duration of temporary withdrawal (leave of absence).

- iii) Absence from classes for more than **six weeks at a time** in a semester without leave of absence being granted by competent authorities.
- iv) Failure to meet the standards of discipline as prescribed by the college from time to time.

12. AWARD OF CLASS

Sometimes, it would be necessary to provide equivalence of these averages, viz., SGPA and CGPA with the percentages and/or Class awarded as in the conventional system of declaring the results of University examinations. This can be done by prescribing certain specific thresholds in these averages for Distinction, First Class and Second Class. This can be seen from the following Table.

Percentage Equivalence of Grade Points (For a 10-Point Scale)

Grade Point	Percentage of Marks	Class
≥ 7.75	$\geq 70\%$	Distinction
≥ 6.75	$\geq 60\%$	First Class
< 6.75	$< 60\%$	Second Class

$$\text{Percentage} = (\text{GPA} - 0.75) \times 10$$

13. APPEAL FOR REVIEW OF GRADES

- a. The entire process of evaluation shall be made transparent and the course instructor shall explain to a student why he/she gets whatever grade he/she is awarded, if and when required. A mechanism for review of grade is incorporated in the evaluation system. However, before appealing for such review, a student shall first approach the concerned course Instructor and then the concerned DUGC, with the request to do the needful; and only in situations where satisfactory remedial measures have not been taken, the student may then appeal to the Department Academic Appeals Boards (DAAB) before the date specified in Academic Calendar, by paying the prescribed fees.
- b. The fee for such an appeal will be decided by the Senate from time to time. If the appeal is upheld by DAAB, then the fee amount will be refunded to the student.

14. AWARD OF DEGREE

14.1 (1) B.E. Degree

- a) Students shall be declared to have completed the Programme of B.E./B.Tech. degree and is eligible for the award of degree, provided the students have undergone the stipulated Course work of all the semesters under the Scheme of Teaching and Examinations and has earned the prescribed number of credits (160 credits for regular students registered for 4 year degree programmes & 120 for lateral entry students).
- b) For the award of degree, a CGPA ≥ 5.00 at the end of Programme shall be mandatory.
- c) Completion of Additional Mathematics I and II, shall be mandatory for the award of degree to lateral entry diploma students.
- d) Completion of Engineering Graphics and Elements of Civil Engineering and Mechanics of First Year Engineering Programme shall be mandatory for the award of degree to lateral entry B.Sc. graduates.
- e) (i) Over and above the academic credits, every Day College regular student admitted to the 4 years Degree Programme and every student entering 4 years Degree Programme through lateral entry, shall earn 100 and 75 Activity Points respectively through AICTE Activity Point Programme for the award of degree. Students transferred from other Universities/Autonomous colleges under VTU to fifth semester are required to earn 50 Activity Points from the year of entry to VTU. The Activity Points earned shall be reflected on the student's eight semester Grade Card.
(ii) Activity Points (non-credit) have no effect on SGPA/CGPA and shall not be considered for vertical progression.

In case students fail to earn the prescribed activity Points before the commencement of 8th semester examinations, eighth semester Grade Card shall be issued only after earning the required activity Points. Students shall be admitted for the award of degree only after the release of the Eighth semester Grade Card.

(2) B.E. (Honors) Degree

VTU, Belagavi has framed the guidelines for applying for the award of Bachelor of Engineering (Honors) degree.

These Regulations are applicable for the following students:

1. Admitted to **I semester** / I year from the academic year **2018-19** (i.e. USN XXX18XXXXX)
2. Admitted to **III semester** / II year from the academic year **2019-20** (i.e. USN XXX19XX4XX)
3. These Regulations are uniformly applicable to Affiliated, Autonomous and Constituent Colleges under VTU.

Eligibility criterion

- (i) Students have to earn 18 or more additional credits through MOOCs.
- (ii) Students shall register for this course from fifth semester onwards.
- (iii) Students shall obtain a grade \geq D in all the courses in first attempt only in all the semesters till 5th.
- (iv) Students shall obtain CGPA of 8.5 and above at the end of fourth semester.
- (v) For Diploma students, they shall complete Additional Mathematics I and II during 3rd and 4th semesters in first attempt only.

Requirements:

- (i) Students shall maintain a grade \geq D in all courses from 5th to 8th semester in 'first attempt' only.
- (ii) Students not having CGPA greater than or equal to 8.5 at the end of the B.E. programme shall not be eligible for the award of Honors degree, even if they have satisfied the requirement of additional credits.
- (iii) Students shall take up additional course work, other than the regular courses prescribed by the University from 5th to 8th semester from NPTEL and other platforms notified by the University and complete the same in any number of attempts with a final score (online assignments: 25 % + Proctored examination: 75 %) leading to the following certificates – ELITE (60 to 75 %) or ELITE + SILVER (76 to 89 %) or ELITE + GOLD (\geq 90 %) before closure of eighth semester as per the academic calendar.
- (iv) Students shall be permitted to drop the registered course work (s) and select alternative course work (s) in case they cannot give proctored examination.
- (v) Students have to take courses from the list of MOOCs approved by the University, which can be from NPTEL / SWAYAM / other platforms.

- (vi) Students shall select courses in consultation with their Class Advisor, such that the content / syllabus of them are not similar to that of the core courses, professional electives or open electives, which the students may chose in the program.
- (vii) Students shall earn the additional credits for these courses through MOOCs, by only appearing in person to the proctored examinations conducted by NPTEL / SWAYAM / other platform. The method of assessment shall be as per NPTEL online platform.
- (viii) The Credit equivalence shall be as follows - 4 weeks of online course duration – 1 credit, 8 weeks of online course duration – 2 credits and 12 weeks of online course duration – 3 credits.

Registration:

- (i) Any student meeting the eligibility criteria and interested to register for Honors degree qualification shall apply to the University through the Principal in the prescribed form along with the prescribed application fees within 15 working days after notification by the University.
- (ii) The Registrar shall notify the registration of the student and it will be notified to the student and the student shall pay a one-time, non-refundable registration fees as prescribed by the University to confirm the registration.

Award of Honors Qualification:

- (i) Students who successfully complete the MOOCs prescribed by the University and submit their E-certificates to the University through the Principal against the notification issued by the Registrar in time before the closure of eighth semester, as per the academic calendar shall be eligible for B.E. (Honors) degree. If a student does not submit the certificates in time on or before the last date, their request shall not be considered, even if they have earned the requisite number of credits.
- (ii) The Honors degree shall be awarded only if the CGPA at the end of the B.E. programme is equal to or greater than 8.5.
- (iii) A student who has earned the requisite number of credits and who has submitted the certificates in time and has been accepted by the University will get B.E. degree with Honors suffixed indicating recognition of higher achievement by the student concerned.

- (iv) Further students fulfilling all the above requirements shall be entitled to receive their transcripts indicating both the achievement of the student concerned.
- (v) The award of the Honors degree shall be recommended by the Academic Senate and approved by the Executive Council of the University.

14.2 (1) Noncompliance of CGPA \geq 5.00 at the end of the Programme

- (a) Students, who have completed all the courses of the Programme but not having a CGPA \geq 5.00 at the end of the Programme, shall not be eligible for the award of the degree.
- (b) In the cases of 14.2 (1) a, students shall be permitted to appear again for SEE in course/s (other than Internship, Technical seminar, Project (Mini and Main), and Laboratories) of any Semester/s without the rejection of CIE marks for any number of times, subject to the provision of maximum duration of the Programme to make up the CGPA equal to or greater than 5.00 for the award of the Degree.
- (c) In case, the students earn improved grade/s in all the reappeared course/s, the CGPA shall be calculated considering the improved grade/s. If it is \geq 5.00, the students shall become eligible for the award of the degree. If CGPA $<$ 5.00, the students shall follow the procedure laid in 14.2 (1) b
- (d) In case, the students earn improved grade/s in some course/s and the same or lesser than the previously earned pass grade/s in the other reappeared course/s, the CGPA shall be calculated considering the improved grade/s and the pass grades earned before the reappearance. If it is \geq 5.00, the students shall become eligible for the award of the degree. If CGPA $<$ 5.00, the students shall follow the procedure laid in 14.2 (1) b
- (e) In case, the students earn improved grade/s in some courses and fail in the other reappeared course/s, the CGPA shall be calculated by considering the improved grade/s and the previously earned pass grade/s of the reappeared course/s in which the students have failed. If it is \geq 5.00, the students shall become eligible for the award of the degree. If CGPA $<$ 5.00, the students shall follow the procedure laid in 14.2 (1) b
- (f) In case, the students fail (i.e., earns F grade) in all the reappeared course/s, pass grade/s of the course/s earned by the students before reappearance shall be retained. In such cases, the students shall follow the procedure laid in 14.2 (1) b

- (g) Students shall obtain written permission from the Registrar (Evaluation) to reappear in SEE to make up the CGPA equal to or greater than 5.00.

(2) Noncompliance of Mini-project

- (a) The mini-project shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take-up/complete the mini-project shall be declared fail in that course and shall have to complete the same during subsequent University examinations after satisfying the Mini-project requirements. Also, mini-project shall be considered for eligibility to VII semester.

(3) Noncompliance of Internship

- (a) All the students of B.E/B.Tech shall have to undergo mandatory internship of 4 weeks during the vacation. A University examination shall be conducted during VIII semester. Internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take-up/complete the internship shall be declared fail in that Course and shall have to complete the same during subsequent University examinations after satisfy the internship requirements.

- 14.3** The maximum duration for a student for complying to the Degree requirements is 16 – semesters from the date of first registration for his first semester (8 years from the date of admission to first year, (12 semesters / 6 years from the date of admission for lateral entry student)).

15 GRADUATION REQUIREMENTS AND CONVOCATION

15.1 A student shall be declared to be eligible for the award of the degree if he/she has

- a) **Fulfilled “Award of Degree” Requirements**
- b) **No Dues to the College, Departments, Hostels, Library, Central Computer Centre and any other centres**
- c) **No disciplinary action pending against him/her.**

15.2 The award of the degree must be recommended by the Senate

15.3 Convocation

Degree will be awarded for the students who have graduated during the

preceding academic year. Students are required to apply for the Convocation along with the prescribed fees, after having satisfactorily completed all the degree requirements (refer 'Award of Degree') within the specified date in order to arrange for the award of the degree during convocation.

16 **AWARD OF PRIZES, MEDALS, CLASS & RANKS**

For the award of Prizes and Medals, the conditions stipulated by the Donor may be considered as per the statutes framed by the College for such awards.

Sometimes, it would be necessary to provide equivalence of these averages, viz., SGPA and CGPA with the percentages and/or Class awarded as in the conventional system of declaring the results of University examinations. This can be done by prescribing certain specific thresholds in these averages for Distinction, First Class and Second Class as described in 12.

17 **CONDUCT AND DISCIPLINE**

17.1 Students shall conduct themselves within and outside the premises of the College in a manner befitting the students of an Institution of National Importance.

17.2 **As per the order of Honorable Supreme Court of India, ragging in any form is considered as a criminal offence and is banned. Any form of ragging will be severely dealt with.**

17.3 The following acts of omission/ or commission shall constitute gross violation of the Code of Conduct and are liable to invoke disciplinary measures:

- a) Ragging.
- b) Lack of courtesy and decorum; indecent behaviour anywhere within or outside the campus.
- c) Willful damage or stealthy removal of any property/belongings of the College/Hostel or of fellow students/citizens.
- d) Possession, consumption or distribution of alcoholic drinks or any kind of hallucinogenic drugs.
- e) Mutilation or unauthorized possession of Library books.
- f) Noisy and unseemly behaviour, disturbing studies of fellow students.
- g) Hacking in computer systems (such as entering into other Person's area without prior permission, manipulation and/or Damage of

computer hardware and software or any other Cyber crime etc.).

- h) Plagiarism of any nature.
- i) Any other act of gross indiscipline as decided by the Senate from time to time.
- j) Use of Mobile in the college Academic area.
- k) Smoking in College Campus and supari chewing.
- l) Unauthorized fund raising and promoting sales.

Commensurate with the gravity of offence the punishment may be: reprimand, expulsion from the hostel, debarring from an examination, disallowing the use of certain facilities of the College, rustication for a specified period or even outright expulsion from the College, or even handing over the case to appropriate law enforcement authorities or the judiciary, as required by the circumstances.

- 17.4 For an offence committed in (i) a hostel (ii) a department or in a class room and (iii) elsewhere, the Chief Warden, the Head of the Department and the Dean (Academics), respectively, shall have the authority to reprimand or impose fine.
- 17.5 All cases involving punishment other than reprimand shall be reported to the Principal.
- 17.6 Cases of adoption of unfair means and/or any malpractice in an examination shall be reported to the Controller of Examinations for taking appropriate action.

18. EARNING OF ACTIVITY POINTS FOR THE AWARD OF DEGREE

- 18.1 As per VTU guidelines, every students entering 4 year degree programme should earn 100 activity points & every students entering 4 year degree programme through Lateral Entry should earn 75 activity points for the award of the Engineering Degree.
- 18.2 The Activity Points earned will be reflected on the student's eighth semester Grade Card.
- 18.3 The activities can be spread over the years (duration of the programme) any time during the semester weekends and holidays, as per the interest & convenience of the students from the year of entry to the programme.

- 18.4 Activity Points (non-credit) have no effect on SGPA/CGPA point.
- 18.5 In case students fail to earn the prescribed Activity Points, Eighth semester Grade Card shall be issued only after earning the required Activity Points.

Note: Students are required to be inside the examination hall 20 minutes before the commencement of examination. This is applicable for all examinations (Semester end/Supplementary/makeup) henceforth. Students will not be allowed inside the examination hall after the commencement, under any circumstances.

LIST OF MAJOR SCHOLARSHIPS

Applicable to	Types of scholarship	Method	Website
For SC/ST Students	Income : Below Rs.2,50,000/-	Online application	 SSP
	Income : Above Rs.2,50,000/- to Rs.10,00,000/-		
For Others	Category I : Income Below Rs.2,50,000/-	Online application	
	Category 2A, 3A, 3B Income Below Rs.1,00,000/-	Online application	
	GSB & Brahmins EWS Certificate upto Rs.8,00,000/-	Online application	
	Minority students Income Below Rs.2,50,000/-	Online application	NSP & SSP
Parents must have Beedi Id. Card	Beedi Scholarship	Online application	scholarships.gov.in or nsp.gov.in

- Scholarship details will be published in the notice board near College Academic Section. Students must see the notice board and submit the application before due dates.
- All SC/ST and Category I students who have not paid any fee in CET must apply for Fee concession or Scholarship. Otherwise they must pay the tuition fee and college fee.
- The students, who are applying for any of the above scholarship through online, must submit the hardcopy with supporting documents (with attestation) to the academic section in time.

LIST OF PROFESSIONAL ELECTIVE COURSES

(Student can register for 6 program electives between 5 th to 8 th semesters from the list given below. Students are advised to register one elective each from Group-I & Group-II in any semester to avoid SEE of both electives on same day)			
Group – I		Group - II	
Course Code	Elective Course Title	Course Code	Elective Course Title
I. <u>Power Electronics & Drives</u>			
21EEE101	Power Semiconductor Devices	20EEE201	Special Electrical Machines
21EEE102	Switched Mode Power Converter	20EEE202	Solid State Lighting Control
21EEE103	Computer Control of Electrical drives	20EEE203	Power Electronics System Design using ICs
II. <u>Control System</u>			
20EEE111	Fuzzy Logic Control	21EEE211	Programmable Logic Controllers
21EEE112	Artificial Neural Networks	21EEE212	Advanced Instrumentation System
21EEE113	Advanced Control Theory	21EEE213	Industrial Servo Control Systems
21EEE114	Robotics and Automation	21EEE214	Discrete Control Systems
21EEE115	Physiology Control System and Simulation Modelling	21EEE215	Micro- and Nano-Scale Sensors and Transducers
III. <u>Energy System</u>			
21EEE121	Renewable Energy Sources	21EEE221	Illumination Technology
21EEE122	Energy Audit & Demand Side Management	21EEE222	Operation and Maintenance of Solar Electrical Systems
21EEE123	Electrical Power Quality	21EEE223	Electrical Power Utilization
21EEE124	Integration of Distributed Generation Systems	21EEE224	Industrial Heating
21EEE125	Electrical Machines Design	21EEE225	Computer Aided Electrical Drawing
IV. <u>Power System</u>			
21EEE131	HVDC Power Transmission	21EEE231	Flexible AC Transmission Systems

21EEE132	Smart Electric Grid	21EEE232	AI Applications to Power Systems

21EE8x10 – Non-Conventional Energy Sources

21EE8x79 – Electric Vehicle Technology

ELECTRICAL MACHINES II

Course Code:	21EE501	Course Type:	IPCC
Teaching Hours/Week (L: T: P: S):	2:2:2:0	Credits:	04
Total Teaching Hours:	25+25+26	CIE + SEE Marks:	50+50
Prerequisite	21EE104		

Course Learning Objectives:

1. To understand the working principle and operating characteristics of DC machine
2. To understand testing methods of DC Machine and to get introduced to special machines.
3. To study the working principle and operating characteristics of synchronous machine .
4. To get acquainted with methods to predetermine voltage regulation of synchronous generator.
5. To understand the process of synchronization of alternator to infinite bus.
6. To get familiarized with the working principle, characteristics, testing and applications of Synchronous motor.

UNIT - I**DC motors****07+03 Hours**

Review of operating principle, Armature reaction, commutation, use of inter poles & pole face compensating winding Characteristics, Speed control of shunt & series motors, losses & efficiency, condition for maximum efficiency.

DC Motor Starter: necessity, 3 -point, 4-point starter

Testing of DC motors**02+02 Hours**

Swinburne's test, Hopkinson's test , Retardation test, Field's test on series motor

Special Motors:**04+02 Hours**

Principle of operation of Brushless DC motor, Stepper motor and Permanent magnet DC motors.

UNIT - II**Synchronous machines****06+06 Hours**

Review of principle of operation, construction of salient & non Salient pole synchronous machines. Generated EMF in a concentrated winding, effect of distribution of winding & use of chorded coils, Regulation by EMF, MMF, ZPF Methods

Parallel operation of alternators**03+05 Hours**

Parallel operation of alternators, Synchronizing of Alternators to infinite bus bars, operating characteristics, power angle characteristics, operation at constant load with variable excitation for generating mode

UNIT - III**Salient pole synchronous machines****02+01 Hours**

Salient pole synchronous machines, two reaction theory, power angle diagram, reluctance power, slip test.

Synchronous motors**03+04 Hours**

Principle of operation, starting methods. Motor at constant load variable excitation. V and inverted V curves, hunting in synchronous machines, synchronous condenser and applications.

Suggested List of Experiments

1. Load test on DC Motor-Determination of speed torque and BHP efficiency characteristics
2. Speed control of DC motors by Armature Voltage and Flux control methods.
3. Swinburne's Test
4. Hopkinson's Test
5. Field test on series motors
6. Load test on BLDC motor
7. Voltage Regulation of Alternator by EMF and MMF method
8. Voltage regulation of alternator by ZPF method
9. Slip test
10. V and inverted V curves of a synchronous motor.

Course Outcomes: At the end of the course student will be able to

1.	Describe the effect of the armature reaction to justify the use of inter-poles and compensating winding and comprehend speed control of a DC motor.
2.	Analyze the characteristics, starters and testing methods to select and evaluate the performance parameters of different DC motors and have a broad idea about special machines such as Brushless DC motor.
3.	Outline the constructional features of alternators and describe tests to predetermine the voltage regulation.
4.	Describe the process of synchronization of alternators and analyze its performance characteristics.
5.	Analyze the performance of salient pole synchronous machine, starting methods and applications of synchronous motor.

SIGNAL ANALYSIS AND PROCESSING

Course Code:	21EE502	Course Type:	PCC
Teaching Hours/Week (L: T: P: S):	2:2:0:0	Credits:	03
Total Teaching Hours:	25+25+0	CIE + SEE Marks:	50+50
Prerequisite	21MA101, 21MA201, 21EE302		

Course Objectives:

1.	To understand the basic operations on signals and properties of systems.
2.	To explain the properties of linear time invariant systems in terms of impulse response description.
3.	To know the Fourier representation of continuous time & discrete time periodic & aperiodic signals and their properties.
4.	To evaluate DFT of various signals using its properties.
5.	To evaluate the effective computation of DFT using fast fourier Transform algorithms.
6.	To know the importance of sampling theorem in signal processing.
7.	To design infinite impulse response digital filters using bilinear transformation technique
8.	To understand the procedures used for the design of linear phase FIR filters using rectangular window

UNIT - I**Introduction:****8 Hours**

Continuous time and Discrete time signals, transformation of independent variables, exponential and sinusoidal signals, UNIT impulse, UNIT step and Sine functions. The sampling theorem, The effect of under sampling: Aliasing, Discrete time processing of continuous time signals, Sampling of discrete time signals, Quantization.

Continuous time and Discrete time systems

12 Hours

Continuous time and Discrete time systems, Properties of system. Continuous time LTI systems: The Convolution Integral. Discrete time LTI system: Convolution Sum. Properties of LTI system (Numerical excluded), Causal LTI systems described by Difference and Differential equations.

UNIT - II**Fourier Representation of Periodic Signals****10 Hours**

Introduction, Fourier representation of continuous-time periodic signals in exponential form, Convergence of the Fourier series. Fourier representation of Discrete-time periodic signals

The Continuous-time Fourier transform: Properties of continuous-time Fourier transform, The Discrete-Time Fourier Transform: Representations of aperiodic signals, duality. Systems characterized by Linear Constant Coefficient Difference equations

Discrete Fourier Transform

10 Hours

Fourier representation of Finite duration sequences: Discrete Fourier Transform (DFT), Properties of DFT. Computation of DFT: Decimation-in-Time FFT algorithms, (Radix-2 Algorithm), Decimation-in-Frequency FFT algorithms (Radix-2 Algorithm),

UNIT - III

Structure for discrete time systems

10 Hours

Block diagram representation of Linear Constant coefficient difference equations. Basic structures for IIR systems (Direct Form I & II only), Basic Structure of FIR systems. (Direct forms and Cascaded Structures). Design of Discrete time IIR filters from continuous time filters using Bilinear Transformation (Butterworth LPF only). Frequency Transformation of Low pass IIR filters (theory only). Design of FIR filters by rectangular window. (Low Pass Filter design only)

Course Outcomes: At the end of the course student will be able to

1.	Analyse signals and systems to study the behavioral aspects & determine the impulse response of CT & DT systems using convolution.
2.	Analyse Continuous and Discrete LTI systems to determine the impulse response and convolution.
3.	Apply Fourier technique to obtain the frequency domain representation of continuous-time & discrete-time aperiodic signals
4.	Apply FFT to compute the frequency domain representation of discrete time sequence
5.	Design of IIR and FIR filters to determine the filter coefficients for a given specification

3. NPTEL Course on Digital Signal Processing by Dr.C. S. Ramalingam, IIT Madras

GENERATION TRANSMISSION AND DISTRIBUTION

Course Code:	21EE503	Course Type	PCC
Teaching Hours/Week (L:T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50
Prerequisite	21EE104		

Course Objectives:

1.	To understand the concepts of various methods of generation of power
2.	To find various parameters of economic aspects
3.	To calculate the parameters of the transmission line for different configurations and assess the performance of the line
4.	To understand the characteristics & performance of power transmission lines.
5.	To understand the concept of underground cables and distribution systems

UNIT - I**Electrical Power Generation****6* Hours**

Hydro Power generation-selection of site, classification of hydroelectric plants, general arrangement and operation, hydroelectric plant power station structure and control.

Thermal Power generation- Introduction, main parts, working, plant layout, Diesel Electric plants, Gas turbine plants-components, layout, advantages over steam turbine plant.

Nuclear Power Station- Introduction, Adverse effects of fossil fuels, components of reactors, Description of fuel sources, Pros and Cons of nuclear power generation, Safety of nuclear, Introduction to Distributed Generation

Economic Aspects**6* Hours**

Introduction, Terms commonly used in system operation, diversity factor, load factor, plant capacity factor, plant use factor, plant utilization factor, loss factor, load duration curve, energy load curve, interconnection of power station, Effect of variable load on power system, classification of costs, cost analysis. Interest and Depreciation, Tariffs, objective, factors affecting the tariff, types. Types of consumers and their tariff. Most economical power factor, importance of high load factor.

Typical transmission & distribution systems scheme**3 Hours**

General layout of power system, Standard voltages for transmission: HVAC, EHVAC, UHVAC, and Advantage of high voltage transmission. Feeders, distributors & service mains,

UNIT - II**Sag calculation in conductors****6* Hours**

Sag calculation for a) suspended on level supports b) support at different levels. Effect of wind & ice tension & sag at erection, line vibration damper.

Insulators: Types, Material used: porcelain, toughened glass and polymer (composite), potential distribution over a string of suspension insulators. String efficiency & methods of increasing strings efficiency, Arcing horns. Testing of insulators

Line parameters**6 Hours**

Calculation of inductance of single phase, 3phase lines with equilateral & unsymmetrical spacing. Inductance of composite conductor lines (GMR and GMD), capacitance calculation for single circuit and double circuit three-phase line with equilateral & unsymmetrical spacing, Bundle conductor and its advantages, Double circuit and transposed lines, Advantages of single circuit and double circuit lines.

Characteristics & performance of power transmission lines**3 Hours**

Classification of lines, Transmission line model for Short transmission lines, medium transmission lines- nominal T, end condenser and pi models, long transmission lines, line regulation. Ferranti effect, ABCD constants of transmission lines.

Corona: Phenomena, Methods of reducing corona

UNIT - III**Underground cables****4* Hours**

Types, material used, insulation resistance, thermal rating of cables, charging current, Grading of cables, capacitance grading.

Distribution**6* Hours**

Requirements of power distribution, ac distribution - radial & ring main systems, calculation for concentrated loads. LVDC distribution system

Introduction to HVDC transmission, and FACTS, Application of HVDC and FACTS

Course Outcomes: At the end of the course student will be able to

1.	Illustrate methods of generation of electrical power and their pros and cons
2.	Appreciate the economic aspects of electrical power and typical transmission & distribution systems scheme.
3.	Demonstrate the concepts associated with overhead transmission line and insulators
4.	Explain the characteristics & performance of power transmission lines.
5.	Interpret the concepts associated with underground cables and introduce the concept of FACTS and HVDC

POWER ELECTRONICS

Course Code:	21EE504	Course Type	PCC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40+0+0	CIE + SEE Marks	50+50
Prerequisite	21EC112, 21EE304		

Course Objectives:

1.	To understand the types and characteristics of power semiconductor devices
2.	To describe the principle of operation of AC voltage controller
3.	To get acquainted with the different types of chopper configurations and methods of control.
4.	To understand the operation of controlled rectifier circuits and performance analysis.
5.	To understand the principle of operation of single-phase and three-phase inverter circuits.

UNIT – I**Introduction****3 Hours**

Introduction, Power Semiconductor Devices: Applications of Power Electronics, Power semiconductor devices, Control Characteristics. Types of power electronic circuits. Peripheral effects.

Power Semiconductor Devices**8 Hours**

Power MOSFET's – static characteristics, switching characteristics, gate drive. IGBT- static characteristics, switching characteristics, di/dt and dv/dt limitations. Isolation of gate and base

drives. Thyristor: SCR- static characteristics, turn on and off characteristics, thyristor firing circuit using UJT, commutation- natural and forced (LC commutation only), Static characteristics of TRIAC, DIAC

AC Voltage Controllers

4 Hours

Introduction. Principle of ON-OFF and phase control. Single -phase bidirectional controllers with R and R-L loads

UNIT - II

DC Choppers

8 Hours

Introduction. Principle of step-down and step-up chopper with R-L load. Performance parameters. Chopper classification. Analysis of impulse commutated thyristor chopper (only qualitative analysis)

Controlled Rectifiers

7 Hours

Introduction. Principle of phase controlled converter operation. Single- phase and three phase semi-converters & Full converters.

UNIT - III

Inverters

10 Hours

Introduction, Principle of operation, Performance parameters, Single -phase bridge inverters. Three phase inverters. Voltage control of single-phase inverters – single pulse width, multiple pulse width, and sinusoidal pulse width modulation. Current source inverters. Variable D.C. link inverter

Course Outcomes: At the end of the course student will be able to

1.	Describe the characteristics of power semiconductor devices used in various Power Electronic Applications
2.	Describe the principle of operation of AC voltage controller to study its parameters
3.	Analyze the various DC choppers to evaluate their performance parameters.
4.	Analyze various controlled rectifier configurations to regulate dc voltage and calculate their performance parameters.
5.	Comprehend the operation of single and three phase inverter circuits to obtain desired AC voltage and analyze various associated parameters.

POWER ELECTRONICS LABORATORY

Course Code:	21EE505	Course Type:	PCC
Teaching Hours/Week (L: T: P: S):	0:0:2:0	Credits:	01
Total Teaching Hours:	0+0+26	CIE + SEE Marks:	50+50
Prerequisite	21EC112, 21EE304		

Teaching Department: Electrical & Electronics Engineering**Course Objectives:**

1.	To study the Static characteristics of SCR, MOSFET and IGBT.
2.	To design and test the UJT relaxation oscillator for triggering SCR.
3.	To study AC voltage controller, single -phase controlled rectifier, single-phase inverter, and chopper circuits

Suggested List of Experiments

1. Static characteristics of SCR
2. Static characteristics of MOSFET and IGBT.
3. Gate drive circuit for MOSFET
4. SCR turn-off using LC commutation
5. SCR turn-on circuit using synchronized UJT relaxation oscillator
6. A.C. voltage controller using TRIAC and DIAC combination connected to Load
7. Single -phase full-wave controlled rectifier
8. DC step down chopper with R and R-L loads.
9. DC step up chopper with R and R-L loads.
10. IGBT-Based Single phase PWM Inverter

Course Outcomes: At the end of the course student will be able to

1.	Draw the static characteristics of MOSFET, IGBT and SCR to identify different regions of operation.
2.	Design and test MOSFET and SCR triggering circuit.
3.	Verify LC commutation circuit to turn-off SCR used in choppers.
4.	Build AC voltage controller using TRIAC-DIAC triggering circuit to produce variable voltage.

5.	Build and test single-phase full-wave and three phase half-wave rectifier to check circuit behavior with R & R-L load.
6.	Verify operation of step up and step-down chopper for R and RL load
7.	Test IGBT based single-phase full-bridge inverter to observe the effect of various modulation techniques.

RESEARCH METHODOLOGY AND IPR

Course Code	21HU511	Course Type	AEC
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02
Total Teaching Hours	25+0+0	CIE + SEE Marks	50+50
Prerequisite			

Course Objectives:

1.	To explain the significance of carrying out research work,
2.	To explain the Research Problem, Review the literature.
3.	To understand Research Design, methodological way of execution.
4.	To understand Data Collection, and Interpretation and Report Writing.
5.	To appreciate the importance of Intellectual property rights protection

UNIT - I**09 Hours****Research Methodology:**

Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method.

Defining the Research Problem:

Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.

Reviewing the literature:

Place of the literature review in research, Bringing clarity and focus to your research problem, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed.

UNIT - II**09 Hours****Research Design:**

Need for Research Design, Features of a Good Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs.

Design of Sample Surveys:

Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs.

Data Collection:

Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method.

Interpretation and Report Writing:

Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout.

Interpretation and Report Writing (continued):

Types of Reports, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.

Pedagogy Chalk and talk, Power point presentation, Videos

UNIT - III**07 Hours****Introduction to Intellectual Property**

Intellectual Property (IP) – Importance, Jurisprudential definition and concept of property, rights, duties and their correlation; evolution of IPR – Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge, Geographical Indications.

Agreements and Treaties

TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty; Indian Patent Act 1970 & recent amendments – Patent (Amendment) Rules, 2017.

Basics of Patents and Concept of Prior Art

Introduction to Patents; Types of patent applications, Specifications: Provisional and complete; Forms and fees Invention in the context of "prior art". Patent databases

Patent filing procedures

National & PCT filing procedure; Status of the patent applications filed; Structure of Patent document, Precautions while patenting – disclosure/non-disclosure; Patent licensing and agreement; Patent infringement- meaning, scope, litigation.

Pedagogy Chalk and talk, Power point presentation, Videos

Course Outcomes: At the end of the course student will be able to

1.	Explain the significance of carrying out research work and identifying a research problem and perform the literature review.
2.	Explain the Research Design, methodological way of execution, Data Collection, and Interpretation and Report Writing.
3.	Explain the importance of Intellectual property rights and patents
4.	Execute Data Collection, and Interpretation and Report Writing.
5.	Explain the importance of Intellectual property rights protection.

ENVIRONMENTAL STUDIES

Course Code:	21CV512	Course Type	MNC
Teaching Hours/Week (L: T: P)	1:0:0	Credits	01
Total Teaching Hours	15+0+0	CIE + SEE Marks	50+50

Course Objectives:

1.	To raise consciousness about environmental conditions and to imbibe environmentally appropriate behaviour.
2.	To equip the engineering undergraduates to identify the significance of environmental practice in their daily life and in the engineering practices.
3.	To make them conscious of understanding the environment where we live and act up on.

UNIT - I**Environment****03 Hours**

Definition, significance of environmental studies- current scenario, local, regional, national and global problems

Components of environment: atmosphere, hydrosphere, lithosphere, and biosphere. Layers of atmosphere and its role.

Parts of Earth- lithosphere and its role; hydrological cycle

Eco system - Definition, ecology and environment, ecosystem components: biotic and abiotic components; ecological balance; elements of ecosystem: biotic, abiotic; producers, consumers and decomposers.

Habitat, range of life, Biome, balanced eco- system, food chain, food web and ecological pyramids

Human activities - The Anthropogenic System- human activities like growing food, building shelter and other activities for economy and social security. Soil erosion, water logging -definition. Organic farming- definition.

Natural resources**03 Hours**

Resources - Natural resources, water, minerals, Fossil fuels and energy

Water resources - Global water resources: distribution, uses of water for irrigation, domestic and industrial purposes in India.

Quality aspects - Water quality parameters, drinking water standards for turbidity, pH value, total hardness, iron, fluoride, lead, arsenic, nitrate

Mineral resources- Metallic minerals, non-metallic minerals Fossil fuels - Coal and petroleum

Forest Wealth - Components of the forest, key benefits of forests. Deforestation-environmental effects of deforestation and remedies Sustainable development- definition, objectives

Material cycles - Carbon, Nitrogen, and Sulphur cycles.

UNIT - II**Environmental pollution: Definition, harmful effects related to public health****03 Hours****Water pollution:**

Definition, types, and sources – agriculture (pesticides and fertilizers), industry, domestic and mining, harmful effects, water borne and water induced diseases- definition, common diseases and their causatives, Fluoride problem in drinking water

Land pollution:

Definition, sources_ agriculture, housing, industry, mining, transportation. Types of municipal Solid waste Disposal (Sanitary landfills, composting, incineration (in brief) and effects

Air Pollution:

Definition, types, and sources: industry, mining, agriculture, transportation, and effects

Noise pollution:

Definition, sources, mining, industries, rail-roads, aviation, effects and control measures

Energy**02 Hours**

Different types of energy-

Non-renewable energy; fossil fuels- coal, oil, and natural gas- brief description only. Nuclear energy- nuclear power plants,

Renewable energy: solar energy- Photovoltaic systems for street and domestic lighting, solar water heating-brief description only

Wind energy- definition, merits and demerits, Hydro power- definition, merits, and demerits.

Biomass energy- definition, sources of bioenergy, biogas, biofuels, India's position in renewable energy

Hydrogen as an alternative future source of energy- brief scope, fuel cells.

UNIT - III**Current environmental issues of importance****04 Hours**

Population growth- Definition, growth rate, effects, remedies Urbanization -

Definition,

environmental impacts and remedies Global warming and climate change-

Concept of greenhouse effect, sources of greenhouse gases, effects, and remedial measures of greenhouse gases

Acid rain: Definition, causes and effects, control measures. Ozone Depletion: Definition, causes, effects, and control measures.

Environmental Impact Assessment- EIA definition, objectives, and benefits of EIA.

Course Outcomes: At the end of the course student will be able to

1.	Identify the significance of environmental practice in their daily life and in the Engineering practices.
2.	Create awareness about environmental conditions.
3.	Follow environmentally appropriate behaviour.
4.	Understand the importance of their surroundings.
5.	Understand Current environmental issues of importance

POWER SYSTEM ANALYSIS			
Course Code	21EE601	Course type	IPCC
Teaching Hours/Week (L:T:P)	2:2:2:0	CIE+SEE	50+50
Total Hours	25+25+26	Credits	04

UNIT – I

Representation of Power System Components: Steady-state models of Transmission line, Synchronous machines, Transformer and Load. One line diagram, Impedance diagram, per UNIT notation, Selection and change of base for per UNIT quantities, per UNIT Impedance diagram of power system, Power flow through Transmission line.

6*+6 Hours

Symmetrical Three-Phase Faults: Transients in RL series circuits, short-circuit current and reactance's of synchronous machine on no-load, Internal voltage of loaded synchronous machine under transient conditions, symmetric short circuit MVA calculations, short-circuit current computation through Thevenin's theorem, Problems,

4*+4 Hours**UNIT – II**

Symmetrical Components: Symmetrical component transformation, Resolution of unbalanced phasors into their symmetrical components and vice-versa, Power in terms of symmetrical components, Phase shift of symmetrical components in Star – Delta transformer bank. Positive, Negative and Zero Sequence impedances and Sequence networks of power system elements (Transmission line, Synchronous machine and Transformer).

6*+6 Hours

Unsymmetrical Faults: Symmetrical component analysis of Unsymmetrical faults: Line-To-Ground (L-G), Line-To-Line (L-L), Double Line-To-Ground (L-L-G) faults on an Unloaded Alternator and Power System with and without fault impedance and connections of sequence networks. Open conductor faults in power systems.

6*+6 Hours**UNIT – III**

Power System Stability: Steady-state and Transient stability, Rotor dynamics and the Swing equation, Power angle equation. Equal – Area criterion of stability and its application for transient stability evaluation. Numerical solution of swing equation by point-by-point method & Runge-Kutta 4th order method.

4*+4 Hours

At the end of the course student will be able to

1. Model the power system components to construct per UNIT impedance diagram.
2. Analyze symmetrical three phase faults in power system to determine short circuit kVA.
3. Apply the concept of symmetrical components to calculate sequence components and draw sequence networks.
4. Analyze the unsymmetrical faults using symmetrical components to determine fault currents.
5. Analyze dynamics of synchronous machine to evaluate transient stability.

Course Outcomes Mapping with Program Outcomes & PSO													
Program Outcomes→	1	2	3	4	5	6	7	8	9	10	11	12	PSO

21EE601.5	2	2		3	3				1	1			2

1: Low 2: Medium 3: High

Laboratory Experiments

1. Modelling of simple power system using PSCAD/ MATLAB
2. Transient Analysis of RL circuit for sinusoidal input
3. Analysis of Symmetrical fault on unloaded synchronous generator
4. Analysis of Symmetrical fault on loaded synchronous generator.
5. Analysis of Symmetrical components from unbalanced phasors
6. Experiment with different winding configurations (Y-Delta, Delta-Y, Delta-Delta, Delta leading or lagging). Observe the Phase differences between the primary and secondary as well as the differences in fault current.
7. Analysis of unsymmetrical faults in unloaded alternator with and without fault impedance
8. Analysis of unsymmetrical faults in power system with and without fault impedance.

SWITCHGEAR AND PROTECTION			
Course Code	20EE602	Course type	PCC
Teaching Hours/Week (L:T:P)	3:0:0:S*	CIE+SEE	50+50
Total Hours	40	Credits	03

* **Self Study Topics** – To be covered under the supervision of the course instructors.

Prerequisites: T&D(20EE406), TIM (20EE402), DCSM (20EE303)

Course Objectives:

1. To understand the basic equipment in power system/substation.
2. To familiarize with the different grounding systems implemented in power systems.
3. To understand the construction and working of different types of circuit breakers used in power systems.
4. To study the characteristics and working of various types of relays
5. To understand the various protection schemes of electrical machines.

UNIT – I

Switches and fuses: Isolating switch, load breaking switch, Fuse law, cut -off characteristics, Time current characteristics, fuse material, HRC fuse, liquid fuse, Application of fuse.

3 Hours

Grounding Systems: Introduction, resistance grounding systems, neutral grounding, ungrounded system, solid grounding, reactance grounding, resonant grounding, earthing transformer

SS Topic: neutral grounding transformer.

4 Hours

Principle of circuit breaking: Principles of AC Circuit breaking, Principles of DC Circuit breaking, problems encountered in DC breaking, Initiation of arc, maintenance of arc, Arc interruption - high resistance and low resistance interruption, Arc interruption theories –Slepian's theory and energy balance theory, Re-striking voltage, recovery voltage, Rate of rise of Re-striking voltage, current chopping, capacitance switching, Rating of Circuit breakers. Operating mechanism of breakers.

SS Topic: resistance switching.

8 Hours

UNIT – II

Construction & principle of operation of Circuits Breakers: Air Circuit breakers – Air break and Air blast Circuit breakers, oil Circuit breakers - Single break, double break and minimum OCB, SF6 breaker - Preparation of SF6 gas, Puffer and non Puffer type of SF6 breakers, Vacuum circuit breakers, advantages and disadvantages of different types of Circuit breakers, Testing of Circuit breakers

SS Topic: short circuit test layout.

7 Hours

Protective Relaying: Requirement of protective relaying, zones of protection, primary and backup protection, essential qualities of protective relaying, classification of protective relays.

2 Hours

Induction type relay: Non-directional and directional over current relays, IDMT and Directional characteristics. Differential relay – Principle of operation, percentage differential relay, bias characteristics, distance relay – Three stepped distance protection, Impedance relay, Reactance relay, Mho relay, Buchholz relay, Negative Sequence relay, relay coordination, Basics of Numerical relay

6 Hours

UNIT – III

Protection Schemes:

Pilot Protection scheme, Generator Protection – Merz-Price protection, prime mover faults, stator and rotor faults, protection against abnormal conditions – unbalanced loading, loss of excitation, over speeding. Transformer Protection - differential protection, differential relay with harmonic restraint.

5 Hours

SS Topic: Inter-turn faults

Induction Motor Protection – Protection against electrical faults such as phase fault, ground fault. Protection of induction motor against abnormal operating conditions such as single phasing, phase reversal and overload.

5 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the necessity of switches, fuses and the importance of grounding systems to select a suitable protection device & grounding scheme.
2. Apply the theory of circuit breaking to determine re-striking, recovery voltage and RRRV.
3. Describe the principle of various circuit breakers to choose a suitable one for a given application.
4. Describe the working principle of various relays and suggest relay settings for different protective zones of transmission line.
5. Apply protection schemes to protect generators, transformers and induction motors.

MANAGEMENT & ENTREPRENEURSHIP			
Course Code	21EE603	Course type	HSMC
Teaching Hours/Week (L:T:P)	3:0:0:0	CIE+SEE	50+50
Total Hours	40	Credits	03

Course Objectives:

1. To introduce the field of management, task of the manager, importance of planning and types of planning, staff recruitment and selection process.
2. To discuss the ways in which work is allocation, structure of organizations, modes of communication and need of coordination between the manager and staff
3. To explain the role and importance of the entrepreneur and their functions in economic development and the concepts of entrepreneurship.
4. To discuss the importance of Small Scale Industries and methods for generating new business ideas and business opportunities
5. To introduce the concepts of project management along with capital building process.
6. To discuss about different institutions at state and central levels supporting business enterprises

UNIT – I

Management: Definition, Importance – Nature and Characteristics of Management, Management Functions, Roles of Manager, Levels of Management, Managerial Skills, Management & Administration, Management as a Science, Art & Profession.

Planning: Nature, Importance and Purpose of Planning, Types of Plans, Steps in Planning, Limitations of Planning, Decision Making – Meaning, Types of Decisions- Steps in Decision Making.

Organizing and Staffing: Meaning, Nature and Characteristics of Organization – Process of Organization, Principles of Organization, Departmentalization, Committees – meaning, Types of Committees, Centralization Versus Decentralization of Authority and Responsibility, Span of Control (Definition only), Nature and Importance of Staffing, Process of Selection and Recruitment.

Directing and Controlling: Meaning and Nature of Directing-Leadership Styles, Motivation Theories Communication – Meaning and Importance, Coordination- Meaning and Importance, Techniques of Coordination. Controlling – Meaning, Steps in Controlling

15 Hours**UNIT – II**

Social Responsibilities of Business: Meaning of Social Responsibility, Social Responsibilities of Business towards Different Groups, Social Audit, Business Ethics and Corporate Governance.

Entrepreneurship: Definition of Entrepreneur, Importance of Entrepreneurship, concepts of Entrepreneurship, Characteristics of successful Entrepreneur, Classification of Entrepreneurs, Intrapreneur – An Emerging Class, Comparison between Entrepreneur and Intrapreneur, Myths of Entrepreneurship, Entrepreneurial Development models, Entrepreneurial development cycle, Problems faced by Entrepreneurs and capacity building for Entrepreneurship

Modern Small Business Enterprises: Role of Small Scale Industries, Concepts and definitions of SSI Enterprises, Government policy and development of the Small Scale sector in India, Growth and Performance of Small Scale Industries in India, Sickness in SSI sector, Problems for Small Scale Industries, Impact of Globalization on SSI, Impact of WTO/GATT on SSIs, Ancillary Industry and Tiny Industry

(Definition only).

Institutional Support for Business Enterprises: Introduction, Policies & Schemes of Central-Level Institutions, State-Level Institutions **15 Hours**

UNIT – III

Project Management: Meaning of Project, Project Objectives & Characteristics, Project Identification Meaning & Importance; Project Life Cycle, Project Scheduling, Capital Budgeting, Generating an Investment Project Proposal, Project Report-Need and Significance of Report, Contents, Formulation, Project Analysis-Market, Technical, Financial, Economic, Ecological, Project Evaluation and Selection, Project Financing, Project Implementation Phase, Human & Administrative aspects of Project Management, Prerequisites for Successful Project Implementation.

New Control Techniques- PERT and CPM, Steps involved in developing the network, Uses and Limitations of PERT and CPM **10 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Describe the field of management, task of the manager, planning and steps in decision making.
2. Discuss the structure of organization, importance of staffing, leadership styles, modes of communication, techniques of coordination and importance of managerial control in business.
3. Describe the concepts of entrepreneurship and a businessman's social responsibilities towards different groups.
4. Develop an understanding of role of SSI's in the development of country and state/central level institutions/agencies supporting business enterprises.
5. Discuss the concepts of project management, capital budgeting, project feasibility studies, need for project report and new control techniques.

RELAY LABORATORY			
Course Code	21EE604	Course type	PCC
Teaching Hours/Week (L:T:P)	0:0:0:2	CIE+SEE Marks	50+50
Total Hours	25	Credits	01

Course Objectives:

1. To find breakdown voltage & dielectric strength of given transformer oil.
2. To demonstrate the operation of various relays like electromechanical and static relays.
3. To get the operating parameters of relays

List of Experiments

Total 10 experiments are to be conducted

PART – A (Choose at least two experiments)

1. Over current relay:
 - a. IDMT non-directional characteristics
 - b. Directional features
 - c. IDMT directional
2. IDMT characteristics of over voltage or under voltage relay. (solid state or electromechanical type)
3.
 - a. To determine 50% probability flashover voltage for air insulation subjected to impulse voltage.
 - b. Generation of standard lightning impulse voltage and to determine efficiency and energy of impulse generator. Operating characteristics of over voltage or under voltage relay. (Solid state or electromechanical type).
4. Operation of negative sequence relay.
5. Bias characteristics of differential relay.
6. Current-time characteristics of fuse.

PART – B (Choose at least one experiment)

1. Operating characteristics of microprocessor based (numeric) over –current relay.
2. Operating characteristics of microprocessor based (numeric) distance relay.
3. Operating characteristics of microprocessor based (numeric) over/under voltage relay.

PART – C (Choose at least one experiment)

1. Generator protection –Merz-Price- protection scheme.
2. Feeder protection scheme-fault studies.
3. Motor protection scheme-fault studies.

Course Outcomes:

At the end of the course student will be able to

1. Apply the principle of operation of electromechanical to obtain its desired characteristics.
2. Apply the principle of operation of static relays to obtain its desired characteristics.
3. Apply the principle of operation of microprocessor relays to obtain its desired characteristics.
4. Explain Merze price protection scheme

MINI PROJECT			
Course Code	21EE605	Course Type	PROJ
Teaching Hours/Week (L:T:P)	0:0:4	CIE+SEE Marks	100+0
Total Hours	-	Credits	02

Course Objectives:

1. To prepare a project synopsis based on theoretical understanding of the concepts and literature survey.
2. To develop and test a hardware prototype.

Course Outcomes:

At the end of the course student will be able to

1. Apply theoretical concepts to identify an engineering problem.
2. Review literature to understand the state-of-the-art technologies.
3. Build a team and contribute effectively towards the project.
4. Develop a hardware prototype to meet the design specifications.
5. Develop technical writing and presentation skills to communicate effectively.

PYTHON PROGRAMMING

Course Code	21EEA61	Course Type	AEC
Teaching Hours/Week (L: T: P: S)	0:0:2:0	Credits	02
Total Teaching Hours	0+0+26	CIE + SEE Marks	50+50
Prerequisite			

Course Objectives:

1.	To write a simple python program with emphasis on syntax and semantics
2.	To write simple programs utilizing Lists, Tuples and Dictionaries.
3.	To write simple program by choosing appropriate conditional operator.
4.	To write simple program consisting of user defined functions.
5.	To study the concept of object oriented programming in python.

UNIT – I	
The Context of Software Development	02 Hours
Software, Development Tools, Learning Programming with Python, Writing a Python Program, The Python Interactive Shell	
Data, Expressions, Statements	04Hours
Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments	
Control Flow, Functions	04 Hours
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional; Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion;	
UNIT - II	
Strings	04 Hours
Strings: string slices, immutability, string functions and methods, string module	
Lists	04 Hours
Lists as arrays, list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters	
Tuples	01 Hours

Tuple assignment, tuple as return value, Built-in functions.	
Dictionaries	01 Hours
Operations, built-in functions and methods; advanced list processing - list comprehension	
UNIT - III	
Python Object Oriented Programming	06 Hours
Concept of class, object and instances, Constructor, class attributes and destructors, Inheritance, overlapping and overloading operators, Adding and retrieving dynamic attributes of classes	

Course Outcomes: At the end of the course student will be able to

1.	Examine the Python syntax and semantics for writing effective Python program using operators, functions for a given problem statement.
2.	Use conditional and switch case statements to write programme in Python to tackle any decision-making scenario.
3.	Utilize the methods of Strings and Lists for write a programme for a given application.
4.	Utilize the methods of Tuples and Dictionaries for write a programme for a given application.
5.	Apply the knowledge OOPs to develop a Python programme using objects and classes.

INDUSTRIAL SAFETY			
Course Code	21EEA62	Course Type	AEC
Teaching Hours/Week (L: T: P: S)	0:0:2:0	Credits	02
Total Teaching Hours	0+0+26	CIE + SEE Marks	50+50
Prerequisite			

Course Objectives:

- To understand the safety precaution to handle machineries in industry
- To understand safe operation of mechanical and electrical tools
- To understand handling of hazardous material
- To understand the various law and regulation involved in industrial safety

UNIT – I

Safe guarding of machines: Statutory provision related to principles in machine guarding. Types of guards, their design and selection. Guarding of different types of machinery including special precautions for wood working, paper, rubber and printing machinery, machine tools etc. Built-in-safety devices, maintenance and repair of guards, incidental safety devices and tools. Safety in Workplace – Plant / Work area Design.

Manual handling and storage of materials: Hazards in manual handling. Avoidance of excessive muscular effort. Kinetic methods of correct lifting and handling of materials. Maximum loads that may be carried. Lifting and carrying of object of different shapes, sizes and weights. Safe use of accessories for manual handling. Storage of materials.

Mechanical handling of materials: Lifting machinery (cranes, elevators, conveyors, dumpers, pay loaders etc.). Safety aspects considered during design, construction and testing of lifting machinery. Training of operator on safe operation, signaling, inspection and maintenance of lifting machinery.

09 Hours**UNIT – II**

Hand tools and portable power tools: Main causes of tool accidents. Control of tool accidents. Centralized tool control. Purchase storage and supply of tools. Inspection, maintenance and repair of tools. Detectable causes of tools failure. Need for tempering, safe ending and dressing of certain tools. Handles of tools. Safe use of various tools. Types of hand tools used for metal cutting, wood cutting, miscellaneous cutting work, material handling and other hand tools such as torsion tools, shock tools, non-sparking tools. Portable power tools and their selection, inspection, maintenance and repair for safe use.

Electrical hazards: Dangers from electricity. Safety limits of amperages. Voltages. Safe distance from lines. Capacity and protection of conductors. Joints and connection. Means of cutting off power. Overload and short circuit protection. Earth fault protection. Earth, insulation and continuity tests. Protection against overvoltage hazards arising out of “borrowed” neutrals. Precautions. Portable electrical apparatus. Flame proof. Electrical equipment: precautions in their selection, installation, maintenance and use. Control of hazards to static electricity. Role of electricians in controlling electrical accidents. Relevant provisions of the Indian Electricity Act and Rules.

Industrial lighting: Purpose of lighting. Advantage of good illumination. Lighting and safety. Lighting and the work. Sources and types of artificial lighting. Principles of good illumination. Recommended minimum standards of illumination. Design of lighting installation, maintenance, lighting and color.

09 Hours

UNIT – III

Safety of pressure vessels: Fired and unfired. Statutory provisions. Testing requirements. Different kinds of testing. Design and construction aspects of safety. Ventilation and heat control. Purpose of ventilation. Thermal environment and its measurements. Physiology of heat regulation. Thermal comfort. Indices of heat stress. Thermal limits for comfort. Efficiency and freedom from health risk. Natural ventilation. Mechanical ventilation. Air conditioning. Process ventilation. Control of heat exposures. Control at source. Insulation. Local exhaust ventilation. Control of radiant heat. Dilution ventilation. Local relief.

Special Precautions: Working at Height – Working in Confined Spaces – Work Permits for Working at Height and Working in Confined Spaces.

Laws and Regulations: Relevant Provisions of Factories Act and Rules, Indian Electricity Act and Rules, Explosive Act and Rules, Gas Cylinders Rules.

8 Hours

Course Outcomes:

At the end of the course student will be able to

1. Understand methods to handle machines, hand tool
2. Apply knowledge of safely handle hazardous material
3. Comprehend need of industrial lighting
4. Understand methods to handle pressure vessels and thermal management
5. Apply knowledge of regulation in working environment

BUSINESS COMMUNICATION			
Course Code:	21EEA63	Course Type	AEC
Teaching Hours/Week (L: T: P)	0:0:2:0	Credits	01
Total Teaching Hours	25	CIE + SEE Marks	50+50

Course Objective:

1. Understand the types of business communication and correspondence
2. Comprehend the processes like receiving, filing and replying
3. Acquire knowledge in preparing good business communications
4. Acquaint with organizational communication requirements and presentations.

UNIT - I**10 Hours**

Introduction and Importance of communication an overview - meaning and process of communication - organizational communication and its barriers. Types of Business Communications –Categories, methods and formats

UNIT - II**10 Hours**

Business vocabulary -Business idioms and collocations – Organizational Hierarchy - Various levels of communication in an organization – Top-down, Bottom-up and Horizontal-Business reports, presentations–Online communications. Receiving business communications -Filing and processing - Sending replies. Routine cycle of communications – Writing Communications.

UNIT - III**05 Hours**

Characteristics of a good business communication-Preparation of business meeting agenda – agenda notes - minutes –circulation of minutes –Presentations of communication using various methods

Course Outcomes: At the end of the course student will be able to

1.	Describe the organizational communication and its barriers
2.	Comprehend the types of business communication
3.	Describe the various level of communication in an organization
4.	Use the routine cycles of communications
5.	Comprehend the characteristics of good communication

INTERNET OF THINGS			
Course Code	21EEA64	Course Type	AEC
Teaching Hours/Week (L: T: P: S)	0:0:2:0	Credits	01
Total Teaching Hours	25	CIE + SEE Marks	50+50
Prerequisite			

Course Objectives:

1.	Assess the genesis and impact of IoT applications, architectures in real world.
2.	Compare different Application protocols for IoT.
3.	Identify sensor technologies for sensing real world entities and understand the role of IoT in various domains of Industry.

UNIT - I**Introduction of IoT****10 Hours**

Introduction of IoT, Genesis of IoT, IoT and Digitization, IoT Impact, Convergence of IT and IoT, IoT Challenges, IoT Network Architecture and Design, Drivers Behind New Network Architectures, Comparing IoT Architectures, A Simplified IoT Architecture, The Core IoT Functional Stack, IoT Data Management and Compute Stack.

UNIT - II**IoT protocols****10 Hours**

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE802.15.4–BACNet Protocol– Modbus – KNX – Zigbee– Network layer – APS layer – Security

UNIT - III**IoT physical servers and cloud offerings****06 Hours**

Introduction to cloud storage models and communication APIs, WAMP – AutoBahn for IoT, Xively cloud for IoT

Course Outcomes: At the end of the course student will be able to

1.	Describe the impact of IoT networks leading to new architectural models.
2.	Describe the challenges posed by IoT networks leading to new architectural models.
3.	Appraise the role of IoT protocols for efficient network communication.
4.	Identify the protocol to be used based on the application
5.	Illustrate different sensor technologies for sensing real world entities and identify the applications of IoT in Industry.

MATLAB PROGRAMMING			
Course Code:	21EEA65	Course Type	AEC
Teaching Hours/Week (L: T: P)	0:0:2:0	Credits	01
Total Teaching Hours	25	CIE + SEE Marks	50+50

Course Objective:

1. To get familiarized with concept of MATLAB programming for array, matrices, logical operations and conditional statements
2. To acquainted with MATLAB programming for numerical methods to solve differential equations.
3. To analyse the electrical circuits using MATLAB Simulink .

UNIT - I**10 Hours**

An Overview of MATLAB®: MATLAB Interactive Sessions, Menus and the Toolbar, Script Files and the Editor/Debugger, The MATLAB Help System

Getting started: Creating MATLAB variables, Overwriting variable, Error messages, Managing the workspace, Miscellaneous commands

Arrays and Matrices: Creating vector, creating matrix, Matrix indexing, Colon operator, creating a sub-matrix, deleting row or column, Transposing a matrix, Concatenating matrices, Matrix generators, Special matrices, Matrix arithmetic operations, Array arithmetic operations, Matrix inverse

Control flow and operators: Relational Operators and Logical Variables, Logical Operators and Functions, Conditional Statements, for Loops, while Loops, The switch Structure, Operator precedence

Plots: Introduction to plots, x-y Plotting Functions, Additional Commands and Plot Types, Interactive Plotting, subplots, Three-Dimensional Plots.

Functions and Files: Elementary Mathematical Functions, User Defined Functions

UNIT - II**10 Hours**

Linear Algebraic Equations: Matrix Methods for Linear Equations, The Left Division Method, Underdetermined Systems, Overdetermined Systems, A General Solution Program

Numerical Methods for Calculus and Differential Equations: Numerical Integration, Numerical Differentiation, First-Order Differential Equations, Higher-Order Differential Equations, Special Methods for Linear Equation

Statistics, Probability, and Interpolation: Statistics and Histograms, Normal Distribution. Random Number Generation, Interpolation

UNIT - III

05 Hours

Introduction to Simulink, Simulink model of a first order and second order systems, simulation of RLC series circuit using Simulink blocks (mathematical modelling).

Simscape Electrical: Introduction Simscape Electrical Blocks, overview of Specialized power system blocks, simulation of simple electrical circuits, RLC series circuit

Course Outcomes: At the end of the course student will be able to

1.	Use matrices and operators in MATLAB programming
2.	Use and write functions; use MATLAB toolbox
3.	Apply linear algebra and numerical methods using MATLAB programming
4.	Write MATLAB programs for statistics and probability
5.	Use Simulink and Simscape tools for modelling electrical systems.

I. POWER ELECTRONICS & DRIVES

POWER SEMICONDUCTOR DEVICES			
Course Code	21EEE101	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: Knowledge of Basic Semiconductor devices.

Course Objectives:

1. To understand the principle of operation of power MOSFET and IGBT with their characteristics and effect of reverse recovery transients on switching stresses & losses
2. To study the construction and switching characteristics of various power semiconductor devices
3. To illustrate the importance of gate drive circuits for power devices, design of snubber circuits and heat sinks.

UNIT – I

Introduction: Power switching devices overview – Attributes of an ideal switch, application requirements, circuit symbols; Power handling capability – (SOA); selection strategy – On-state and switching losses – EMI due to switching – Power diodes – Types, forward and reverse characteristics, switching characteristics – rating

7 Hours

Power MOSFET: Basic structure & operation, I-V Characteristics, On-state operation, Turn-on, turn-off process, Switching characteristics: Turn-on transient, dv/dt capability, Turn-off transient, turn-off time, Switching losses, Safe operating Area, Effect of reverse recovery transients on switching stresses & losses, dv/dt limitations.

8 Hours

UNIT – II

Power IGBT: basic structure & operation, i-v characteristics, Latch-up in IGBT, Switching characteristics: turn-on, Turn-off transient, current tailing, Switching losses, Device limits & SOA, Over-current & short-circuit protection of IGBT

7 Hours

Power Electronics Devices: Construction and features of - Phase Controlled thyristors, inverter graded thyristors, ASCR, RCT, SUS, SBS, SCS, GTO, MCT, SIT, IGCT, MTO, ETO, PIC. Comparison of power devices.

8 Hours

UNIT – III

Firing and Protecting Circuits: Necessity of isolation, pulse transformer, optocoupler – Gate drives circuit: SCR, MOSFET, IGBTs and base driving for power BJT. - Over voltage, over current and gate protections; Design of snubbers, Guidance for heat sink selection, heat sink types and design – Mounting types.

10 Hours

Course Outcomes:

At the end of the course student will be able to

1. Analyze characteristics of power semiconductor devices to select an appropriate device for given application
2. Summarize switching and I-V characteristics of MOSFET to know the maximum switching frequency limit.
3. Analyze the I-V and switching characteristics to summarize dv/dt and di/dt limitations, over current and short circuit protections to ensure safe operation of IGBT.
4. Describe the construction and features of the emerging power electronic devices.
5. Analyze the importance of gate drive and protection circuits to switch power electronic converters.

SWITCHED MODE POWER CONVERTERS			
Course Code	21EEE102	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:0	CIE+SEE Marks	50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: Power Electronics (21EE504).

Course Objectives:

1. To introduce the concept of switched mode power converters
2. To study the working of non-isolated and isolated DC-DC switching power converters
3. To understand the working of switched mode DC-AC inverters
4. To understand the concept of resonant converter
5. To study various power line disturbance and power conditioners
6. To design high frequency transformer and inductor

UNIT – I

DC-DC switched mode converter topologies: Introduction, generalized comparison between switched mode and linear dc regulator, Control of dc-dc converters, Buck, Boost, Buck-Boost, Cúk dc-dc converter topologies, Full-bridge dc-dc converter.

8 Hours

DC-DC converter with isolation: Flyback converters, other Flyback converter topologies, forward converter, push-pull converter, half and full bridge converter.

7 Hours

UNIT – II

DC-AC switched mode inverters: Basic concept of switch-mode Inverters, single-phase inverter, three phase inverters. SPWM inverter, detailed theory, working principles, modes of operation with circuit analysis, ripple in the inverter output, switch utilization, problems.

8 Hours

Resonant switch converters: Classification of resonant converter, Resonant switch converter – ZCS, ZVS, ZVS-CV dc-dc converters; Resonant dc-link inverter with ZVS, problems.

7 Hours

UNIT – III

Power line disturbances, Power Conditioner, Uninterruptible Power Supplies, solar power based bidirectional inverter.

High frequency inductor and transformers design: specific inductor, transformer design, Inductor and transformer design procedure.

10 Hours

Course Outcomes:

At the end of the course student will be able to

1. Compare and contrast the Linear Voltage Regulator & SMPC. Describe the working principle of various non-isolated dc-dc converters and design the converter for a given specification
2. Describe the principle of operation of various isolated dc-dc converter and illustrate the design steps to be followed.
3. Analyze various switched mode inverters configurations to calculate performance parameters.
4. Analyze the performance of different resonant converters base on their working principle.
5. Design the magnetic components to be used in switched mode power supply and analyze the role of power conditioners to suppress various power line disturbances.

COMPUTER CONTROL OF ELECTRICAL DRIVES			
Course Code	21EEE103	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: Power Electronics (21EE504), Industrial Drives and Applications (21EE703).

Course Objectives:

1. Review the applications micro controllers and power electronics in industrial drives
2. Explain the classification and control of AC drive using digital logic
3. Illustrate the control of synchronous machine and phase-controlled converters.
4. Explain the principals of slip power recovery schemes and effect of EMI.
5. Identify the use of expert system application to drives and understand the concept of vector control of ac drives.

UNIT – I

REVIEW OF MICRO CONTROLLERS IN INDUSTRIAL DRIVES

SYSTEM: Typical Micro controller's 8 bit 16 bit (only block diagram) Digital Data Acquisition system, voltage sensors, current sensors, frequency sensors and speed sensors. **4 Hours**

EVOLUTION OF POWER ELECTRONICS IN DRIVES: Power semiconductor devices used for drives control, Ratings, comparison and their applications. Block diagram of power integrated circuit for DC motor drives. **4 Hours**

AC MACHINE DRIVES: general classification and National Electrical Manufacturer Association (NEMA) classification, Speed control of Induction motors with variable voltage constant frequency, constant voltage variable frequency, (v/f) constant operation, drive operating regions. Variable stator current operation. Effect of Harmonics. **8 Hours**

UNIT – II

SYNCHRONOUS MACHINE DRIVES: Wound field machine, comparison of Induction and wound field synchronous machines, Torque angle characteristics of salient pole synchronous machines, synchronous reluctance permanent magnet synchronous machines (SPM), variable reluctance machines (VRM). **5 Hours**

PHASE CONTROLLED CONVERTERS: Converter controls, Linear firing angle control, cosine wave crossing control, phase locked Oscillator principle **2 Hours**

Electromagnetic Interference (EMI) and line power quality problems, cyclo converters, voltage fed converters, Rectifiers, Current fed Converters. **3 Hours**

PRINCIPALS OF SLIP POWER RECOVERY SCHEMES: Static Kramer's drive system, block schematic diagram, phasor diagram and limitations, Static Scherbins scheme system using D.C link converters with cyclo converter modes of operation, modified Scherbins Drive for variable source, constant frequency (VSCF) generation **5 Hours**

UNIT – III

PRINCIPLE OF VECTOR CONTROL OF A C DRIVES: Phasor diagram, digital Implementation block diagram, Flux vector estimation, indirect vector control block diagram with open loop flux control, synchronous motor control with compensation. **4 Hours**

EXPERT SYSTEM APPLICATION TO DRIVES (ONLY BLOCK DIAGRAM): Expert system shell, Design methodology, ES based P-I tuning of vector-controlled drives system, Fuzzy logic control for speed controller inverter control drives, structure of fuzzy control in feedback system.

5 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the advances in microcontrollers and power electronics to understand their application in industrial drives.
2. Analyze different speed control methods of AC drives to choose appropriate method for a given drive requirements.
3. Analyze torque angle characteristics of synchronous motor drive, synchronous reluctance and variable reluctance machines, Understand phase-controlled converters used in control of electrical drives
4. Describe the principals of slip power recovery schemes to improve the efficiency of drive.
5. Describe principle of vector control of AC drives and application of expert systems for control of electrical drives.

SPECIAL ELECTRICAL MACHINES			
Course Code	21EEE201	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: DCSM (21EE303), TIM (21EE402).

Course Objectives:

1. To study the working principle of stepper motor and its control
2. To understand working of switched reluctance motor
3. To know the difference between PMDC & BLDC motors
4. To understand principle of operation of permanent magnet synchronous motor
5. To introduce single phase special machines

UNIT – I

Stepper Motor: Variable reluctance (VR) Stepper Motor, Permanent Magnet Stepper Motor, Hybrid Stepper Motor, Other Types, Windings of Stepper Motor, open –loop, closed loop control of stepper motor, Microprocessor based control of stepper motor. **8 Hours**

Switched Reluctance Motor (SRM): Construction, Principle of working, Basic SRM analysis, constraints on pole arc and tooth arc, Power Converter Circuits, Control of SRM, Rotor Position sensors, Current Regulator, Microprocessor Based Control of SRM, Sensorless Control of SRM. **7 Hours**

UNIT – II

Synchronous Reluctance Motor (SyRM): Construction, Working, Control of SyRM, Advantage, Applications. **3 Hours**

PMDC and BLDC Motors: Permanent Magnet DC (PMDC) Motor – Construction, working, Types of PMDC Motors, Brushless Permanent Magnet DC (BLDC) Motors – Classification, construction, Electronic commutation, principle of operation, BLDC square wave motor, Types of BLDC motor, Control of BLDC motor, Microprocessor Based control, DSP Based Control, Sensorless Control, Comparison of DC and BLDC motor, Applications **9 Hours**

Permanent Magnet Synchronous Motor: Construction, principle of operation, Control of PMSM, Applications of PMSM. **3 Hours**

UNIT – III

Single Phase Special Electrical Machines: AC Series Motor – Construction, Working Principle, torque-speed characteristics. Repulsive Motor – Construction, types. Hysteresis Motor, Single Phase Reluctance Motor, Universal Motor – Types, Construction, principle of operation, speed control. **5 Hours**

Servo Motors: DC Servo Motors – Construction, Principle of operation, voltage equation, control of DC servo motor. AC Servo Motor – Construction, working, torque speed characteristics. **5 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Describe working principle of different stepper motor types to achieve microprocessor based control.
2. Summarize working principle and requirements of power converter to achieve sensorless control of switched reluctance motor.
3. Compare and differentiate PMDC & BLDC motors to select a drive based on requirements
4. Describe the principle of operation of permanent magnet synchronous motor.
5. Outline the operation of single phase special machines and servo motors.

SOLID STATE LIGHTING CONTROL			
Course Code	21EEE202	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To acquaint knowledge different types of light source and its utility.
2. To know the integration of lighting in diverse application.
3. To upgrade the knowledge in smart lighting.
4. To enumerate the skill in energy saving using solid state lighting.
5. To give insight to design steps involved in building solid state lighting

UNIT – I

Introduction: different types of light source –black body radiator, human vision, mesopic, scotopic, photopic vision, human light transduction model, lumen, luminous intensity, illumination, luminous efficacy, maintenance factor, depreciation factor, photometric analysis. **7 Hours**

Color science: introduction to solid state lighting, construction of solid state lighting source, Details of LEDs, color renderance, correlated color temperature, binning, Macadam ellipse, different steps in Macadam ellipse, chromaticity diagram, color mixing, color evaluation techniques objective and subjective color analysis –problems **8 Hours**

UNIT – II

Converters for Lighting: drivers, linear regulator, switch mode regulators using buck, boost and buck boost converter, Adaptive Control Techniques **8 Hours**

Light and health: light as radiation, tissue damage by ultraviolet radiation, Tissue Damage by Visible and Near Infrared Radiation, Tissue Damage from Infrared Radiation beyond 1400 nm, Threshold Limit Values, Practical Considerations, Aging Effects, Risk of Exceeding Limits, Using Task Lights, Eyestrain, Migraine, Autism, Visual Comfort and Human Variability, Light Operating through the Circadian System, Sleep, blue light hazard. **9 Hours**

UNIT – III

Application of Solid-state lighting: Horticulture lighting, Hospital lighting, architectural lighting, commercial lighting, Seasonal Affective disorder, Alzheimer, museum lighting. **8 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Analyze the color discrimination of the light source based on subjective and objective analysis
2. Identify the LED binning and illustrate the importance of Macadam ellipse
3. Categorize the color characteristic of the light source
4. Design the drivers for LEDs based on linear and switch mode regulators
5. Comprehend the application of solid-state lighting in health, commercial and non-commercial sectors

POWER ELECTRONICS SYSTEM DESIGN USING ICs			
Course Code	21EEE203	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE +SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

- Analyze power electronic systems using ICs and apply the knowledge in a theoretical context.
- Understand switching regulator control circuits
- Design high performance power electronic circuits using different ICs for various applications.
- Think laterally and originally to solve power electronic circuits, and evaluate problems for switching power supplies.
- Analyze Power Plant control using Programmable Logic Controller.

UNIT – I

Introduction: Measurement techniques for voltages, current, power, power factor in power electronic circuits, other recording and analysis of waveforms, sensing of speed. **7 Hours**

Switching Regulator Control Circuits: Introduction, isolation techniques of switching regulator systems, PWM systems. **8 Hours**

UNIT – II

Commercial PWM Control ICs and their Applications: TL 494 PWM Control IC, UC 1840 Programmable off line PWM controller, UC 1524 PWM control IC, UC 1846 current mode control IC, UC 1852 resonant mode power supply controller. **8 Hours**

Switching Power Supply Ancillary, Supervisory & Peripheral Circuits and Components: Introduction, Opto-couplers, self-biased techniques used in primary side of reference power supplies, Soft/Start in switching power supplies, current limit circuits, over voltage protection, AC line loss detection, Implementation of different gating circuits. **8 Hours**

UNIT – III

Programmable Logic Controllers (PLC): Basic configuration of a PLC, Programming and PLC, program modification, power plant control using PLCs. **9 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Describe the techniques used for measurements of parameter in a power electronics circuit.
2. Describe the operation of switching regulator control circuits
3. Understand the architecture of commercial PWM control ICs.
4. Describe switching power supply ancillary, supervisory & peripheral circuits and components used in designing switching power supply.
5. Apply Programmable Logic Controller in power plant control

*- If PBL is carried out as a team

SEE Question Paper Pattern:

- There will be **8** questions of **20** marks each in the question paper categorized into **3 UNITS** as per the syllabi & contact Hours. The student will have to answer **5** full questions, selecting **2** full questions each from **UNIT - I & UNIT – II** and **1** full question from **UNIT – III**.

TEXTBOOKS:

1. G. K. Dubey, S. R. Doradla, A. Johsi, and R. M. K. Sinha, "Thyristorised Power Controllers", 2nd Edition, New Age International, 2010.
2. Chrysis "High Frequency Switching Power Supplies", 2nd Edition, MGH, 1989.
3. UNIT rode application notes: <http://www.smps.us/UNIT rode.html>

II. CONTROL SYSTEM

FUZZY LOGIC CONTROL			
Course Code	21EEE111	Course Type	50
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE +SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To differentiate conventional Set theory and Fuzzy logic
2. To study the concept of linguistic variables and inference rules
3. To analyse the application of fuzzy logic controller systems.
4. To understand the fuzzy knowledge-based controllers (FKBC)
5. To understand the process of performance monitoring and adaption mechanism using FKBC.

UNIT – I

Introduction: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, cardinality operations on fuzzy relations, Fuzzy Cartesian product and composition, fuzzy Tolerance and equivalence relations.

7 Hours

Theory of approximate reasoning: Linguistic variables, linguistic hedges, Fuzzy if then statements, inference rules, compositional rule of inference, graphical technique of inference, Fuzzification and defuzzification procedures.

8 Hours

UNIT – II

Development of membership functions-intuition, inference, rank ordering, neural networks, genetic algorithm, inductive reasoning Assumptions in a Fuzzy control system design, Simple fuzzy logic controllers, Examples of fuzzy logic controllers.

9 Hours

Fuzzy knowledge-based controllers (FKBC): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, FKBC as a Non-linear transient element, Design of P, PI, PD, PID controllers, sliding mode FKBC, Sugeno FKBC.

8 Hours

UNIT – III

ADAPTIVE FUZZY CONTROL: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller, Model based controller.

8 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the fundamentals of Fuzzy logic to apply in systems with uncertainty.
2. Classify the linguistic variables & inference rules to formulate knowledge based system
3. Design sample fuzzy control systems to study the system behavior
4. Analyze fuzzy knowledge-based controllers (FKBC) to compare its performance with conventional controllers.
5. Describe the adaptive fuzzy control system to enhance the performance of FKBC systems.

ARTIFICIAL NEURAL NETWORKS			
Course Code	21EEE112	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

- To introduce the concept and use of ANN
- To explain the concept of supervised learning and various leaning algorithms.
- To illustrate the use of Accelerating learning process and need of prediction network
- To familiarize with the concept of Learning vector quantizing and associative modeling
- To understand the need of optimization and different optimization algorithms

UNIT – I

Introduction, history, structure and function of single neuron, neural net architectures, neural learning, use of neural networks. **7 Hours**

Supervised learning, single layer networks, perceptron's, linear separability, perceptron training algorithm, guarantees of success, modifications. **4 Hours**

Multiclass networks-I, multilevel discrimination, preliminaries, back propagation, setting parameter values, theoretical results. **5 Hours**

UNIT – II

Accelerated learning process in layered neural network, application, mandalene, adaptive multilayer networks. **4 Hours**

Prediction networks, radial basis functions, polynomial networks, regularization, unsupervised learning, winner take all networks. **4 Hours**

Learning vector quantizing, counter propagation networks, adaptive resonance theorem, topologically organized networks, distance based learning, noncognition. **4 Hours**

Associative models, hop field networks, brain state networks, Boltzmann machines, hetero associations. **4 Hours**

UNIT – III

Optimization using hop filed networks, simulated annealing, random search, evolutionary computation. **8 Hours**

Course Outcomes :

At the end of the course student will be able to

1. Describe the architecture of neural network to identify the functionalities of different layers.
2. Apply the single layer and multilayer learning algorithms to solve nonlinear system.
3. Describe the accelerated learning process and unsupervised learning algorithm.
4. Analyse the learning vector quantizing and associative modelling techniques to solve uncertainty in the system.
5. Describe the various neural network optimization algorithms

ADVANCED CONTROL THEORY			
Course Code	21EEE113	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: Linear Control System (20EE503), VCTT (20EE301)

Course Objectives:

1. To outline the state model and deduce the state equations for LTI systems.
2. To compute state transition matrix, the Eigen values and Eigen vectors.
3. To analyze the system for controllability and observability .
4. To design the controller using pole placement techniques to ensure stability.
5. To understand the behaviour of non-linear system and analyse the phase trajectory
6. To study the Lyapunov stability criteria for nonlinear systems.

UNIT – I

State variable analysis & design, canonical representation and transfer function, linearization of state equations, State space representation using physical variables. State space representation using phase variables & canonical variables, Derivation of transfer function from state model, Solution of state equation. **7 Hours**

State transition matrix & its properties, computation using Laplace transformation, Cayley-Hamilton method (only computation), Eigenvalues, Eigen vectors, generalized Eigen vectors, diagonalization. **7 Hours**

UNIT – II

Concept of controllability & observability, methods of determining the same. Pole placement techniques: stability improvements by state feedback, necessary & sufficient conditions for arbitrary pole placement. **8 Hours**

Introduction, behaviour of non-linear system, common physical non-linearity-saturation, friction,

backlash, dead zone, relay, multi variable non-linearity, Phase plane method, singular points, stability of nonlinear system, limit cycles, construction of phase trajectories by Isocline method and Delta method.

9 Hours

UNIT – III

Lyapunov's stability criteria for linear as well as nonlinear systems, stability definitions, theorems, sign definiteness, direct method, second method, Krasovskii's method, variable gradient method and for linear systems for state variable models.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Develop various state space model to obtain the transfer function for LTI system
2. Compute state transition matrix to solve the state equation
3. Analyze the pole placement techniques to enhance the stability of the system.
4. Identify the behavior of nonlinear system & evaluate various methods of stability to understand the system behavior.
5. Apply Lyapunov criteria to evaluate the Stability of linear and nonlinear system.

ROBOTICS AND AUTOMATION			
Course Code	21EEE114	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To understand the basic of composition of a robot
2. To illustrate various robot sensors and construction of robot
3. To familiarize the concept of kinematics of the robot
4. To enumerate the functions and advantages of the robot
5. To know the robot programming concept

UNIT – I

Introduction: Introduction to robotics, Components and Structure of Robots, robot classification, robot configurations, specifications, Common Kinematic arrangements, Rotations, Composition of Rotations, Properties, Homogeneous Transformation. **8 Hours**

Robot sensors: Introduction, desirable features of sensors, magnetic sensors, fibre optic, tactile sensors, proximity and non- proximity sensors. **4 Hours**

Manipulators, Actuators and grippers: Construction of manipulators, types of actuators, grippers, classification, force analysis of gripper mechanism, designing of grippers. **4 Hours**

UNIT – II

Control: Introduction, Actuator dynamics, Set-Point Tracking, Drive Train Dynamics, Trajectory Interpolation, Feed forward Control and Computed Torque. **4 Hours**

Kinematics: Forward, inverse and velocity kinematics Denavit- Hardenberg Representation, Examples **4 Hours**

Dynamics: Euler Lagrange Equations, Expressions for kinetic and potential energy, Equation of Motions, Common configuration, Newton Euler Formulation. **7 Hours**

Robot machine vision: Introduction, image processing and analysis. **7 Hours**

UNIT – III

Robot programming: Lead through programming methods, Robot programming languages-examples. **5 Hours**

Case studies: Robot applications in manufacturing, robot cell design, machine interface, multiple robots, robot in assembly and inspection. **4 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Recognize the components and classify robots based on its composition
2. Identify and describe various sensors to construct the robot.
3. Derive the kinematics of the robot to derive the control aspects
4. Apply the mathematical models to validate the dynamics of the system
5. Identify different programming methods and languages to the effective functioning of robot.

PHYSIOLOGY CONTROL SYSTEM AND SIMULATION MODELLING			
Course Code	21EEE115	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: VCTT, PTNM, Control Systems, Advanced Control Theory

Course Objectives:

1. To introduce the basic system concepts and differences between an engineering and physiological control systems.
2. To acquaint students with different mathematical techniques applied in analysing a system and the various types of nonlinear modelling approaches.
3. To teach neuronal membrane dynamics and to understand the procedures for testing, validation, and interpretation of physiological models.
4. To study the cardiovascular model and apply the modelling methods to multi-input and multi output systems.

UNIT – I

Introduction to Physiological control systems: -Introduction, Similarities and difference with Technological control, Transfer of substances between physiological compartments: By diffusion, by fluid flow and separated by a thin membrane using differential equations.

7 Hours

Regulation in physiological control system: Regulation of electrolyte concentration, acid base balance, red blood cell production, arterial pressure, blood volume, respiration, body temperature, blood glucose.

8 Hours

UNIT – II

Biological control structure and modelling: Basic control structure and detailed parameters, Biofeedback, modelling of human thermal regulatory system including control aspects, Biochemistry of digestion, types of heat loss from body

8 Hours

Control and regulation of respiratory system: Modelling of oxygen uptake, mass balance of lungs, gas transport mechanism of lungs, oxygen and carbon dioxide transport in blood and tissue.

7 Hours

UNIT – III

Application of biological control: Eye tracking control, Pupil control.

5 Hours

MATLAB Application and simulation: Derivation of Cardiovascular control system theoretical and using matlab .

5 Hours

Course Outcomes:

At the end of the course student will be able to

1. Comprehend the basic system concepts and differences between an engineering and physiological control systems.
2. Understand the application of various mathematical techniques in designing a bio-control system.
3. Comprehend the techniques of plotting the responses in both the domain analysis.
4. Apply time domain and frequency domain analysis to study the biological systems.
5. Develop simple models of the physiological control systems and analyze its stability.

3. David Cooney, Bio-Medical Engineering Principles, 2015, 1st Edition, Marcel Dekker Pub Co., New York.

List of experiments for task by simulation

1.	Develop a mathematical model and analyse the response of muscle stretch reflex mechanism for an impulse input.
2.	Develop the simplified model of cardiovascular system and measure the rise time, peak overshoot, settling time and steady state error for the nominal values of L, C and R and compare with the response of diseased person.
3.	Identify the physiological system from the time response analysis for the known input and output conditions.

4.	Frequency response analysis and designing of lag/lead compensator for improving the phase margin, gain margin and bandwidth of the light pupil reflex model. Estimate the range of K for stability.
5.	Design of controllers (P,PI, PID) for improving time domain specifications of lung mechanics

PROGRAMMABLE LOGIC CONTROLLERS			
Course Code	21EEE211	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: DSD (21EE303)

Course Objectives:

1. To understand the role of PLC in automation and SCADA, hardware capabilities of PLC in industrial automation.
2. To Program a PLC using ladder Diagram, Functional Block Diagram (FBD), Sequential Functions Charts (SFC), Instruction List (IL) and Structured Text (ST) methods
3. To Program a PLC using timers, counters, shift registers, data handling instructions.

UNIT – I

Introduction: Introduction to Programmable logic controller (PLC), SCADA Fundamentals: Introduction, Open system: Need and advantages, Building blocks of SCADA systems, role in automation, advantages and disadvantages, hardware, internal architecture, sourcing and sinking, characteristics of I/O devices, list of input and output devices, examples of applications. I/O processing, input/output UNITS, signal conditioning, remote connections, networks, processing inputs I/O addresses. Human Machine Interfaces (HMIs).

9 Hours

UNIT – II

Programming: Ladder programming- ladder diagrams, logic functions, latching, multiple outputs, entering ladder programs, functional blocks, program examples, location of stop and emergency switches.

7 Hours

Programming Languages: Instruction list, sequential functions charts, structured text

Internal Relays: ladder programs, battery- backed relays, one - shot operation, set and reset, master control relay, example programs, jump and call subroutines.

9 Hours

UNIT – III

Timers and counters: Types of timers, programming timers, OFF- delay timers, pulse timers, programming examples, forms of counter, programming, up and down counting, timers with counters, sequencer.

8 Hours

Shift register and data handling: shift registers, ladder programs, registers and bits, data handling, arithmetic functions, closed loop control, Structure of control system, Temperature control

7 Hours

Note: Discussing the programming should be restricted to only one type of PLC (Mitsubhishi)

Course Outcomes:

At the end of the course, the student will be able to

1. List and describe characteristics of various I/O devices and interface them to PLC UNIT
2. Apply suitable logic using various programming languages to achieve specific control mechanism for a given application
3. Use internal relays of PLC to control peripheral devices
4. Identify timer/counter resources of a PLC to design control logic for interfaced device.
5. Choose special functionalities of PLC to control and monitor functions and design the real-world applications

ADVANCED INSTRUMENTATION SYSTEM			
Course Code	21EEE212	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: BEE (21EE104), I&M (21EE306)

Course Objectives:

1. To know the various aspects of instrumentation.
2. To understand the working principles of various measuring instruments and their characteristics.
3. To comprehend with the working of various transducers.
4. To know the need of Data acquisition, conversion and transmission.

UNIT – I

Instrumentation: Frequency meter, measurement of time and frequency (mains), tachometer, phase meter, capacitance meter. Automation in digital Instrumentation.

7 Hours

Analyzer: Wave analyzers and Harmonic distortion, Basic wave analyzer, Frequency selective wave analyzer, Harmonic distortion analyzer and Spectrum analyzer.

8 Hours

UNIT – II

Measuring Instruments: Output power meters, Field strength meter Vector impedance meter, Q meter applications-Z, Z₀ and Q. Basic LCR bridge, RX meters.

4 Hours

Measurement of power: Measurement of large amount of RF power (calorimetric method), measurement of power on a transmission line, standing wave ratio measurements.

4 Hours

Transducers: Synchro's, Capacitance Transducers, Load cells, Piezo electrical Transducers, IC type temperature sensors, Pyrometers, Ultrasonic temperature Transducer, Reluctance pulse pick-ups, Flow measurement-mechanical Transducers; Magnetic flow meters, turbine flow meters. β -gauge.

8 Hours

UNIT – III

Data acquisition and conversion: Generalized data acquisition system (DAS), Signal conditioning of inputs, single channel DAS, multi-channel DAS, data loggers, compact data logger.

4 Hours

Data transmission: universal serial bus, IEEE-1394. Long distance data transmission (modems), IEEE 488 bus, Electrical interface.

5 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the principle of different sensors for the measurement of frequency and phase
2. List various types of signal analyzer to understand the operating principle & applications.
3. Describe the operating principle of various measuring instruments to determine the electrical parameters
4. Describe the working principles of various transducers to measure the electrical parameters of physical system
5. Describe the process of data acquisition and conversion for the effective data transmission

INDUSTRIAL SERVO CONTROL SYSTEMS			
Course Code	21EEE213	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

- To explain the evolution and classification of servos, with descriptions of servo drive actuators, amplifiers, feedback transducers, performance, and troubleshooting techniques.
- To discuss system analogs and vectors, with a review of differential equations.
- To represent servo drive components by their transfer function, to combine the servo drive building blocks into system block diagrams.
- To determine the frequency response techniques for proper servo compensation.
- To explain perform indices and performance criteria for servo systems.

UNIT – I

Introduction, Benefits of Servo Systems, Types of Servos - Evolution of Servo Drives, Classification of Drives, Components of Servos - Hydraulic/Electric Circuit Equations, Actuators—Electric, Actuators—Hydraulic, Amplifiers—Electric, Amplifiers—Hydraulic, Transducers (Feedback)

8 Hours

Machine Servo Drives: Types of Drives, Feed Drive Performance.

Troubleshooting Techniques: Techniques by Drive, Problems: Their Causes and Cures.

Machine Feed Drives: Advances in Technology, Parameters for making Application Choices.

Application of Industrial Servo Drives: Introduction, Physical System Analogs, Quantities and Vectors, Differential Equations for Physical Systems, Electric Servo Motor Transfer Functions and Time Constants, Transport Lag Transfer Function, Hydraulic Servo Motor Characteristics, General Transfer Characteristics

8 Hours

UNIT – II

Generalized Control Theory: Servo Block Diagrams, Frequency-Response Characteristics and Construction of Approximate (Bode) Frequency Charts, Nichols Charts, Servo Analysis Techniques, Servo Compensation.

Indexes of Performance: Definition of Indexes of Performance for Servo Drives, Indexes of Performance Electric and Hydraulic Drives

8 Hours

Performance Criteria: Percent Regulation, Servo System Responses.

Servo Plant Compensation Techniques: Dead-Zone Non-linearity, Change-in-Gain Non-linearity, Structural Resonances, Frequency Selective Feedback, Feed-forward Control.

Machine Considerations: Machine feed drive Considerations, Ball Screw Mechanical Resonances and Reflected Inertias for Machine Drives

7 Hours

UNIT – III

Machine Considerations: Drive Stiffness, Drive Resolution, Drive Acceleration, Drive Speed Considerations, Drive Ratio Considerations, Drive Thrust/Torque and Friction Considerations, Drive Duty Cycles

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Identify the benefits of servo system and various components to use in hydraulic /electric circuits.
2. Derive differential equations & transfer functions of servosystem to apply in physical systems.
3. Apply the generalized control theory for servo systems to study the frequency response.
4. Describe the various performance criteria & servo plant compensation techniques to the servo system
5. Identify the various machine considerations for servo drive systems.

DISCRETE CONTROL SYSTEM			
Course Code	21EEE214	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: Linear Control System, Advanced Control Theory

Course Objectives:

1. To model the discrete-time systems by pulse transfer function
2. To study the stability of discrete time systems and the time response of discrete systems.
3. To examine the response of discrete time systems and the controllability observability and stability of discrete state space model.
4. To introduce the concept of state feedback system and the digital control systems with deadbeat response.
5. To analyze the sampled data control systems using root locus and bode plot techniques

UNIT – I

Introduction to digital control: Introduction, Discrete time system representation, Mathematical modeling of sampling process, Data reconstruction

Modelling discrete-time systems by pulse transfer function: Revisiting Z-transform, Mapping of s-plane to z-plane, Pulse transfer function, Pulse transfer function of closed loop system, Sampled signal flow graph. **8 Hours**

Stability analysis of discrete time systems: Jury stability test, Stability analysis using bi-linear transformation

Time response of discrete systems: Transient and steady state responses, Time response parameters of a prototype second order system. **8 Hours**

UNIT – II

Discrete state space model: Introduction to state variable model, Various canonical forms, Characteristic equation, state transition matrix, Solution to discrete state equation

Controllability, observability and stability of discrete state space models: Controllability and observability, Stability, Lyapunov stability theorem. **8 Hours**

State feedback design: Pole placement by state feedback, Set point tracking controller, Full order

observer, Reduced order observer.

Deadbeat response design: Design of digital control systems with deadbeat response, Practical issues with deadbeat response design, Sampled data control systems with deadbeat response

7 Hours

UNIT – III

Illustration of design procedures of sampled data control systems: Root locus method, Nyquist stability criteria, Bode plot, Controller design using root locus, Lead compensator design using Bode plot, Lag compensator design using Bode plot, Lag-lead compensator design in frequency domain (qualitative)

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Develop the mathematical modelling of the discrete-time systems to derive the pulse transfer function
2. Analyse the stability & times response characteristics of discrete time systems to observe the system performance.
3. Develop various state space model & construct state matrix to solve the state equation.
4. Design the various state feedback system & identify the issues of deadbeat response design to digital control system.
5. Analyse discrete time controllers using root locus and bode plot techniques to evaluate the system stability.

MICRO- AND NANO-SCALE SENSORS AND TRANSDUCERS			
Course Code	21EEE215	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

1. To explain measurement of pressure using sensors, based nanotechnology, their structure, theory of operation.
2. To explain structure, theory of operation of sensors based on nanotechnology for Motion, acceleration, measurement, gas and smoke detection.
3. To explain sensors based on nanotechnology for the measurement of atmospheric moisture and moisture inside the electronic components.
4. To explain Optoelectronic and Photonic Sensors used in optical microphones, fingerprint readers, and highly sensitive seismic sensors.
5. To explain the structure, operation of Biological Sensors, Chemical Sensors, and the so-called "Lab-on-a-Chip" sensors used in multipurpose biological and chemical analysis devices and Electric, Magnetic, and RF/Microwave, Integrated Sensor/Actuator UNITS and Special Purpose Sensors driven by nanotechnology.

UNIT – I

Pressure Sensors: Capacitive Pressure Sensors, Inductive Pressure Sensors, Ultrahigh Sensitivity Pressure Sensors.

Motion and Acceleration Sensors: Ultrahigh Sensitivity, Wide Dynamic Range Sensors, Other Motion and Acceleration Microsensors.

Gas and Smoke Sensors: A CO Gas Sensor Based on Nanotechnology, Smoke Detectors.

14 Hours**UNIT – II**

Moisture Sensors: Structure, Theory, Main Experimental Results, Auxiliary Experimental Results.

Optoelectronic and Photonic Sensors: Optoelectronic Microphone, Other Optoelectronic and Photonic Micro Sensors.

Biological, Chemical, and “Lab on a Chip” Sensors: Lab on a Chip Sensors, Other Biochemical Micro- and Nano-Sensors.

Electric, Magnetic, and RF/Microwave Sensors: Magnetic Field Sensors, Other Important Electromagnetic/RF Micro- and Nano-Sensors. **16 Hours**

UNIT – III

Integrated Sensor/Actuator UNITS and Special Purpose Sensors: Aircraft Icing Detectors, Other Special Purpose Small-Scale Devices. **10 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Classify various pressure sensors, and select a sensor depending upon the application.
2. Categorize various motion & acceleration sensors, gas and smoke sensors and choose a sensor for a particular application
3. Classify various moisture sensors, Optoelectronic & Photonic Sensors and select a sensor depending upon the application.
4. Categorize various Biological, Chemical, and “Lab on a Chip” Sensors, Electric, Magnetic, and RF/Microwave Sensors and choose a sensor for a particular application
5. Classify various Integrated Sensor/Actuator UNITS and Special Purpose Sensors and select a sensor depending upon the application.

TEXTBOOK:

1. Micro- and Nano-Scale Sensors and Transducers, Ezzat G. Bakhoum, CRC Press, 2015

III. ENERGY SYSTEMS

RENEWABLE ENERGY SOURCES			
Course Code	21EEE121	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To understand the principle of extraction of energy from conventional and non conventional sources.
2. To familiarize with the operation and applications of solar based thermal, electrical and PV systems
3. To justify the usage of energy storage techniques
4. To discuss the design process and implementation of wind based energy conversion systems
5. To study the process of design and implementation of biomass based energy conversion systems.

UNIT – I

Energy Sources: Introduction, importance of energy consumption as measure of prosperity, Per capita energy consumption, classification of energy resources; conventional energy resources - availability and their limitations; non-conventional energy resources – classification, advantages, limitations; comparison of conventional and non-conventional energy resources; world energy scenario; Indian energy scenario.

3 Hours

Solar Energy Basics: Introduction, solar constant, basic sun-earth angles – definitions and their representation, solar radiation geometry (numerical problems), estimation of solar radiation of horizontal and tilted surfaces (numerical problems); measurement of solar radiation data – Pyranometer and Pyrliometer.

5 Hours

Solar Thermal Systems: Principle of conversion of solar radiation into heat, solar water heaters (flat plate collectors), solar cookers – box type, concentrating dish type, solar driers, solar still, solar furnaces and solar green house.

4 Hours

Solar Electric Systems: Solar thermal electric power generation – solar pond and concentrating solar collector (parabolic trough, parabolic dish, central tower collector). Advantages and disadvantages; solar photovoltaic – solar cell fundamentals, characteristics, classification, construction of module, panel and array.

Solar PV Systems – stand-alone and grid connected systems; its applications to street lighting, domestic lighting and solar water pumping systems.

4 Hours

UNIT – II

Energy Storage: Introduction, necessity of energy storage, and methods of energy storage (classification and brief description using block diagram representation only).

4 Hours

Wind Energy: Introduction, wind and its properties, history of wind energy, wind energy scenario – world and India. basic principles of wind energy conversion systems (WECS), classification of WECS, parts of a WECS, derivation for power in the wind, electrical power output and capacity factor of WECS, wind site selection consideration, advantages and disadvantages of WECS

4 Hours

Biomass Energy: Introduction, photosynthesis process, biomass fuels, biomass conversion technologies, urban waste to energy conversion, biomass gasification, biomass to ethanol production, biogas production from waste biomass, factors affecting biogas generation, types of biogas plants – KVIC and Janata model; biomass program in India. **7 Hours**

UNIT – III

Energy from Ocean: Tidal energy – Principle of tidal power, components of tidal power plant (TPP), classification of tidal power plants, estimation of energy – single basin and double basin type TPP (no derivations. simple numerical problems), advantages and limitation of TPP. ocean thermal energy conversion (OTEC): principle of OTEC system, methods of OTEC power generation – open cycle (Claude cycle), closed cycle (Anderson cycle) and hybrid cycle (block diagram description of OTEC); site-selection criteria, bio fouling, advantages & limitation of OTEC **5 Hours**

Emerging Technologies: Fuel cell, small hydro resources, hydrogen energy and wave energy. (principle of energy generation using block diagrams, advantages and limitations). **4 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Describe nonconventional energy sources and solar radiation geometry to estimate & measure solar radiation.
2. Apply the principle of solar radiation into heat to understand the operation of solar thermal and solar electric systems.
3. Describe energy storage methods and wind-energy conversion systems to understand the factors influencing power generation.
4. Apply the biomass conversion technologies to design biomass based energy systems.
5. Describe tidal, ocean thermal and fuel cell energy conversion systems to understand emerging renewable energy technologies.

ENERGY AUDIT & DEMAND SIDE MANAGEMENT			
Course Code	21EEE122	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

1. To determine the demand, profile of usage and techniques of energy measurement
2. To understand the power distribution for economic development of the nation.
3. To understand the parameters of electrical system optimization
4. To introduce and analyze various techniques of demand side management.
5. To be familiarized with load management & different electrical tariff systems

UNIT – I

Introduction: Energy situation – world and India, energy consumption, conservation. codes, standards and legislation. **5 Hours**

Energy Economic Analysis: The time value of money concept, developing cash flow models, Payback analysis, depreciation, taxes and tax credit –problems. **5 Hours**

Energy Auditing: Introduction, elements of energy audits, energy use profiles, measurements in energy audits, presentation of energy audit results. **5 Hours**

UNIT – II

Electrical System Optimization: The power triangle, motor horsepower, power flow concept, electrical equipment and power factor –correction & location of capacitors. **6 Hours**

Demand Side Management: Introduction to DSM, concept of DSM, benefits of DSM, different techniques of DSM – time of day pricing, multi-utility power exchange model and time of day models for planning. **10 Hours**

UNIT – III

Energy efficient motors, Lighting basics, Electrical rate tariff: Load management, load priority technique, peak clipping, peak shifting, valley filling, strategic conservation, energy efficient equipment. **9 Hours**

Course Outcomes: At the end of the course student will be able to

1. Estimate energy consumption & conservation by suggesting installation modification to compute payback period.
2. Measure and collect data to present energy audit results.
3. Analyze the power flow based on motor horsepower to suggest power factor correction.
4. Describe various techniques to implement demand side management.
5. Evaluate various methods to manage the load using energy efficient equipment.

ELECTRICAL POWER QUALITY			
Course Code	21EEE123	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: PSAS (21EE601), PE (21EE504)

Course Objectives:

1. To introduce the concept of power quality and their classes.
2. To illustrate the voltage sags and interruptions, their sources, estimation & protection
3. To analyze the transient over voltages, fundamentals of harmonics, harmonic sources & effects of harmonic distortions.
4. To discuss power quality bench marking process and utility interface
5. To review the monitoring considerations and standards.

UNIT – I

Definitions: General classes of power quality problems, Transients, long duration voltage variation, short duration voltage variations, voltage imbalance, waveform distortion, power quality terms

3 Hours

Voltage sags and interruptions: Sources of sags and interruptions, estimating voltage sag performance, fundamental principles of protection, monitoring sags.

5 Hours

Transients over voltages: Sources of transient over voltages, principles of overvoltage protection, utility capacitor switching transients, fundamentals of harmonics: harmonic distortion, voltage versus transients, harmonic indexes, harmonic sources from commercial loads, harmonic sources from Industrial loads, effects of harmonic distortion, intra-harmonics

8 Hours

UNIT – II

Applied harmonics: Harmonic distortion evaluations, principles for controlling harmonics, harmonic studies, devices for controlling harmonic distortion, harmonic filters, standards of harmonics

7 Hours

Power quality benchmark: Introduction, benchmark process, power quality contract, power quality state estimation, including power quality in distribution planning, Interface to utility system, power quality issues, interconnection standards

8 Hours

UNIT – III

Power quality monitoring: Monitoring considerations, power quality measurement equipments, assessment of power quality measurement data, application of intelligent systems and power quality monitoring standards.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe various power quality issues to estimate voltage sag and performance.
2. Analyze transient over voltages & harmonics to understand the factors affecting the power quality
3. Describe the principle for controlling the harmonics and filters to meet the standards
4. Describe the power quality bench marking process and power quality contract to solve power quality issues.
5. Identify the Monitoring considerations, standards, measurement equipment, and application of intelligent systems.

INTEGRATION OF DISTRIBUTED GENERATION SYSTEMS			
Course Code	21EEE124	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

- To explain power generation by alternate energy source like wind power and solar power.
- To explain selection of size of UNITS and location for wind & solar systems.
- To study the effects of integration of distributed generation on the performance the system.
- To provide practical and useful information about grid integration of distributed generation
- To understand impact of integration of DG on power system stability and operation.

UNIT – I

Distributed Generation: Introduction, status, properties of wind power, power distribution as a function of wind speed, solar power: status, properties, space requirements, photovoltaic's, seasonal variation in production capacity, combined heat-and-power: status, options for space heating, hydropower: properties of large hydro, properties of small hydro, variation with time, tidal power, wave power, geothermal power, thermal power plant. **7 Hours**

Distributed Generation (continued): Interface with the grid. power system performance: impact of distributed generation on the power system, aims of the power system, hosting capacity approach, power quality, voltage quality and design of distributed generation, hosting capacity approach for events, increasing the hosting capacity. **4 Hours**

Overloading and Losses: Impact of distributed generation, overloading: radial distribution networks, active power flow only, active and reactive power flow overloading: redundancy and meshed operation redundancy in distribution networks meshed operation, losses. **4 Hours**

UNIT – II

Over loading and Losses (continued): Increasing the hosting capacity: increasing the loadability building new connections, inter trip schemes, advanced protection schemes, energy management systems. power electronics approach, demand control, prioritizing renewable energy, dynamic loadability.

Voltage Magnitude Variations: Impact of distributed generation, voltage margin and hosting capacity: voltage control in distribution systems, voltage rise owing to distributed generation, hosting capacity, estimating hosting capacity without measurements, sharing hosting capacity.

Design of Distribution Feeders: Basic design rules, terminology, an individual generator along a medium-voltage feeder, low voltage feeders, series and shunt compensation, a numerical approach to voltage variations: example for two-stage boosting, general expressions for two- stage boosting tap changers with line- drop compensation: transformer with one single feeder, adding a generator. probabilistic methods for design of distribution feeders: need for probabilistic methods, the system studied, generation with constant production, adding wind power. **6 Hours**

Voltage Magnitude Variations (continued): Statistical approach to hosting capacity, increasing the hosting capacity: new or stronger feeders, alternative methods for voltage control accurate measurement of the voltage magnitude variations, allowing higher overvoltage's overvoltage protection, over voltage curtailment compensating the generators voltage variations, distributed generation with voltage control, coordinated voltage control. **5 Hours**

Power Quality Disturbances: Impact of distributed generation, fast voltage fluctuations: fast fluctuations in wind power, fast fluctuations in solar power, rapid voltage changes, very short variations. voltage unbalance: weaker transmission system, stronger distribution system, large single-phase generators, stronger distribution grid voltage unbalance. **5 Hours**

UNIT – III

Power Quality Disturbances (continued): Low-frequency harmonics: wind power: induction generators, generators with power electronics interfaces, synchronous generators, measurement example, harmonic resonances, weaker transmission grid, and stronger distribution grid. High-frequency distortion: emission by individual generators, grouping below and above 2 khz, limits below and above 2 khz, voltage dips: synchronous machines balanced dips and unbalanced dips, induction generators and unbalanced dips, increasing the hosting capacity: strengthening the grid, emission limits for generator UNIT s, emission limits for other customers, higher disturbance levels, passive harmonic

filters, power electronics converters, reducing the number of dips, broadband and high-frequency distortion.

9 Hours

Course Outcomes:

At the end of the course the student will be able to:

1. Describe solar, wind, hydro and tidal power generation to understand the concepts of distributed generation
2. Analyze the system performance on integrating the distributed generation system with the grid
3. Analyze the effects of the DG integration to determine the increased risk of overload and system losses
4. Describe the effects of DG integration to study the impact of power quality issues.
5. Analyze the power quality disturbance to understand the impact of voltage dips on system load.

ELECTRICAL MACHINE DESIGN			
Course Code	21EEE125	Course Type	PEC
Teaching Hours/Week (L:T:P)	2*:2:0	CIE+SEE Marks	50+50
Total Hours	26*+26	Credits	03

* **Note:** Lecture Hours indicated are for teaching theoretical concepts. Illustrative examples and numerical problems are to be worked out in tutorial classes.

Prerequisites: Electrical Machine-2 (21EE501), Electrical Machine-1 (21EE402)

Course Objectives:

1. To describe the process of electrical machine design
2. To illustrate the design of single phase and three phase transformer
3. To analyze the design of DC machines
4. To the analyze the design of Three phase Induction Machine

UNIT – I

Principles of electrical machine design:

Introduction, considerations for the design of electrical machines, limitations. Different types of materials and insulators used in electrical machines.

3*+0 Hours

Design of transformers (Single phase and three phase): Output equation for single phase and three phase transformers, choice of specific loadings, expression for volts/turn, determination of main dimensions of the core, types of windings and estimation of number of turns and cross sectional area of primary and secondary windings, estimation of no load current, expression for leakage reactance and voltage regulation. Design of tank and cooling tubes (round and rectangular).

7*+10 Hours

UNIT – II

DESIGN OF DC MACHINES: Output equation, choice of specific loadings and choice of number of poles, design of Main dimensions of the DC machines, Design of armature slot dimensions, commutator and brushes, magnetic circuit - estimation of ampere turns, design of yoke and poles, field windings – shunt, series and inter poles.

6*+6 Hours

DESIGN OF INDUCTION MOTORS: Output equation, Choice of specific loadings, main dimensions of three phase induction motor, Stator winding design,

4*+4 Hours

UNIT – III

DESIGN OF INDUCTION MOTORS (Contd.)

choice of length of the air gap. Estimation of number of slots for the squirrel cage rotor, design of Rotor bars and end ring, design of Slip ring Rotor, Estimation of no load current and leakage reactance.

6*+6 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the design process of electrical machines for given specification
2. Design single phase and three phase transformer for required specification
3. Design the field system of a DC machine for given specification
4. Design the armature of a DC machine for given specification
5. Design a three-induction machine for required specification

ILLUMINATION TECHNOLOGY			
Course Code	21EEE221	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

- To understand the importance of Light
- To comprehend the propagation of light & photometric UNITS
- To demonstrate the process of production of radiation and their characteristics
- To enumerate the principle of artificial light sources.
- To design the objectives and methods for Interior lighting.

UNIT – I

Light- Eye & Vision: Electromagnetic spectrum- visible spectrum- structure of the eye-Retina- Rods & Cones- distribution & functions of rods & cones-Photopic, Scotopic & Mesopic visions- Purkinje shift color-vision, vision functions – accommodation, adaptation & convergence- luminance contrast & color contrasts- metamerism.

8 Hours

Propagation of light & photometric UNITS: Light propagation-Reflection-specular, diffuse, spread, compound, scattered & selective reflections. Absorption, transmission, refraction, polarization.

Inter relation between the various photometric quantities, luminous efficacy, spectral eye sensitivity curve-light watt-brightness-luminous existence-radiometric quantities & UNITS-point by point method of luminance calculations –problems.

8 Hours

UNIT – II

Production of radiation: Sources of radiation-generation-coherent & incoherent radiations-Incandescence -Thermal Radiation-Black body radiator-Spectral energy distribution-(Energy-Wavelength) diagram-color temperature-c.t-selective c radiators-color appearance & color rendering Luminescence- Fluorescence-low pressure & high pressure gaseous discharges-glow & arc discharges – V-I characteristics.

8 Hours

Artificial light sources: construction- principle of operation- luminous efficiency- lamp life & color characteristics of incandescence, Tungsten halogen, fluorescent, high pressure mercury vapor, High Pressure sodium vapor and metal halide lamps- new trends in lamp technology.

8 Hours

UNIT – III

Interior Lighting Design: Lighting design objectives-safety and health performance-appearance & comfort lighting design flow chart. Lighting for commercial and public buildings such as offices, hotels teaching establishments and hospital lighting.Lighting for industrial buildings, low & high bay area's general lighting designs. Lighting for display- Shops & super markets, art galleries, museum lighting, lumen method of calculations-simple problems.

8 Hours

Light and health: light as radiation, tissue damage by ultraviolet radiation, Tissue Damage by Visible and Near Infrared Radiation, Tissue Damage from Infrared Radiation beyond 1400 nm, Threshold Limit Values, Practical Considerations, Aging Effects, Risk of Exceeding Limits, Using Task Lights, Eyestrain, Migraine, Autism, Visual Comfort and Human Variability, Light Operating through the Circadian System, Sleep, blue light hazard.

3 Hours

Course Outcomes:

At the end of the course student will be able to

1. Analyze the electromagnetic spectrum of light to justify the concepts of vision systems.
2. Describe the light propagation principle to illustrate the photometric parameters
3. Describe the process of radiation to analyze and distinguish color rendering properties.
4. Apply the concept of artificial light sources to suggest efficient lighting system.
5. Design lighting systems to suggest interior and exterior in-addition to health safety.

OPERATION AND MAINTENANCE OF SOLAR ELECTRICAL SYSTEMS			
Course Code	21EEE222	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

- To understand the solar radiation and PV technologies
- To familiarize with PV inverters and mounting methods of PV systems
- To examine the site assessment, design process of the grid connected system and its sizing.
- To know the procedures of installation, commissioning and maintenance of PV systems.
- To discuss the types of financial incentives available, calculation of payback time

UNIT – I

Solar Resource and Radiation: Solar resources, quantifying solar radiation, the effect of the Earth's atmosphere on solar radiation, Sun geometry, Geometry for installing solar arrays.

3 Hours

PV Industry and Technology: Semiconductor devices, Mainstream technologies, Monocrystalline

silicon, Multicrystalline/polycrystalline silicon, Thin film solar cells, Contacts, Buying solar modules, Standards, Certifications, Warranties, Emerging technologies, Dye-sensitized solar cells, Sliver cells, Heterojunction with intrinsic thin layer (HIT) photovoltaic cells, III-V Semiconductors, Solar concentrators.

3 Hours

PV Cells, Modules and Arrays: Characteristics of PV cells, Graphic representations of PV cell performance, Connecting PV cells to create a module, Specification sheets, creating a string of modules, Creating an array, Photovoltaic array performance, Irradiance, Temperature, Shading

2 Hours

Inverters and Other System Components: Introduction, Inverters, Battery inverters, Grid-interactive inverters, Transformers, Mainstream inverter technologies, String inverters, Multi-string inverter, Central inverter, Modular inverters, Inverter protection systems, Self-protection, Grid protection, Balance of system equipment: System equipment excluding the PV array and inverter, Cabling, PV combiner box, Module junction box, Circuit breakers and fuses, PV main disconnects/isolators, Lightning and surge protection, System monitoring, Metering, Net metering, Gross metering.

4 Hours

Mounting Systems: Roof mounting systems, Pitched roof mounts, Pitched roof mounts for tiled roofs, Pitched roof mounts for metal roofs, Rack mounts, Direct mounts, Building-integrated systems, Ground mounting systems, Ground rack mounts, Pole mounts, Sun-tracking systems, Wind loading, Lightning protection

3 Hours

UNIT – II

Site Assessment: Location of the PV array, Roof specifications, Is the site shade-free?, Solar Pathfinder, Solmetric Suneye, HORI catcher, iPhone apps, Software packages, Available area, Portrait installation, Landscape installation, Energy efficiency initiatives, Health, safety and environment (HSE) risks, Local environment, Locating balance of system equipment, Site plan.

3 Hours

Designing Grid-connected PV Systems: Design brief, Existing system evaluation, Choosing system components, Modules, Mounting structure, Inverters, Cabling, Voltage sizing, Current sizing, Monitoring, System protection, Over-current protection, Fault-current protection, Lightning and surge protection, Grounding/earthing, Mechanical protection, Array protection, Sub-array protection, Extra low voltage (ELV) segmentation.

2 Hours

Sizing a PV System: Introduction, Matching voltage specifications, Calculating maximum voltage, Calculating minimum voltage, Calculating the minimum number of modules in a string, Calculating the maximum voltage, Calculating the maximum number of modules in a string, Calculating the minimum voltage, Calculating the minimum number of modules in a string, Matching current specifications, Matching modules to the inverter's power rating, Losses in utility-interactive PV systems, Temperature of the PV module, Dirt and soiling, Manufacturer's tolerance, Shading, Orientation and module tilt angle, Voltage drop, Inverter efficiency, Calculating system yield.

3 Hours

Installing Grid-connected PV Systems: PV array installation, DC wiring, Cabling routes and required lengths, Cable sizing, PV combiner box, System grounding/earthing, Inverter installation, Installation checklist, Interconnection with the utility grid, required information for installation, Safety.

3 Hours

System Commissioning: Introduction, Final inspection of system installation, Testing, Commissioning, System documentation.

2 Hours

System Operation and Maintenance: System maintenance, PV array maintenance, Inverter maintenance, System integrity, Troubleshooting, Identifying the problem, Troubleshooting PV arrays,

Troubleshooting underperforming systems, Troubleshooting inverters, other common problems.

3 Hours

UNIT – III

Marketing and Economics of Grid-connected PV Systems: Introduction, PV system costing, Valuing a PV system, Simple payback and financial incentives, Simple payback, Feed-in tariffs, Rebates, Tax incentives, Loans, Renewable portfolio standards and renewable energy certificates, Marketing, Insurance.

4 Hours

Case Studies: Case studies A to G

5 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe basic concepts of solar cell to illustrate PV technologies
2. Describe various PV inverter topologies & to suggest the methods of mounting the PV panels
3. Describe the factors related to site assessment to design the grid connected systems.
4. Outline the process of PV installation and commissioning to operate & maintain the PV systems.
5. Analyze the economics of grid connected PV systems to calculate the payback time.

ELECTRICAL POWER UTILIZATION			
Course Code	21EEE223	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	40	Credits	03

Prerequisites: Basic Electrical Engineering (21EE104), Sensors and Measurements (20EE405), Electrical machine -2 (21EE501)

Course Objectives:

1. To understand the types and working of various heating and welding equipment.
2. To be familiarized with the electrolysis process and its control using electrical power
3. To select different traction equipment based on their characteristics and to control them
4. To introduce to Illumination, its requirements and study the construction & working of different types of lamps
5. To introduce electric and hybrid vehicles and associated technologies

UNIT – I

HEATING AND WELDING: Advantages and methods of electric heating, resistance ovens, induction heating, dielectric heating, the arc furnace, heating of building, electric welding, resistance and arc welding, control device and welding equipment **9 Hours**

ELECTROLYTIC PROCESS: Fundamental principles, extraction, refining of metals, electroplating. Factors affecting electro deposition process, power supply for electrolytic process. **7 Hours**

UNIT – II

ELECTRIC TRACTION: System of traction, speed time curve, tractive effort at /co-efficient of adhesions, selection of traction motors, method of speed control, energy saving by series parallel control, **8 Hours**

AC TRACTION EQUIPMENT: AC series motor, characteristics, regenerative braking, linear induction motor and their use. AC traction, diesel electric equipment, train lighting system, specific energy, factors affecting specific energy consumption. **7 Hours**

UNIT – III

ILLUMINATION: Laws of illumination, lighting calculation, factory lighting, flood lighting, street lighting, different types of lamps, incandescent, fluorescent, vapor and CFL and their working, Glare and its remedy **6 Hours**

INTRODUCTION ELECTRIC AND HYBRID VEHICLES:

Configuration and performance of electrical vehicles, traction motor characteristics, tractive effort, transmission requirement, vehicle performance and energy consumption. **3 Hours**

Course Outcomes:

At the end of the course student will be able to

1. List the various methods of electrical heating and welding to select an appropriate method for a given application.
2. Describe the fundamental principles of electrolytic processes of extraction and refinement of metals
3. Select and control electric motors for traction to achieve energy savings.
4. Analyze the characteristics of AC traction motors, train lighting system and compute specific energy consumption.
5. Apply fundamentals of illumination to design lighting for a given application and outline the transmission requirements of EVs.

INDUSTRIAL HEATING			
Course Code	21EEE224	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

- To explain construction, classification of industrial furnaces
- To know the different processes of heat transfer in industrial furnaces
- Explicate the heating capacity of continuous furnaces.
- discuss the methods of saving energy in industrial furnace systems
- Explain the operation and control of industrial furnaces.

UNIT – I

Industrial Heating Processes: Industrial Process Heating Furnaces, Classifications of Furnaces, Elements of Furnace Construction.

Heat Transfer in Industrial Furnaces: Heat Required for Load and Furnace, Flow of Heat Within the Charged Load, Heat Transfer to the Charged Load Surface, Determining Furnace Gas Exit Temperature, Thermal Interaction in Furnaces, Temperature Uniformity, Turndown.

7 Hours

Heating Capacity of Batch Furnaces: Definition of Heating Capacity, Effect of Rate of Heat Liberation,

Effect of Rate of Heat Absorption by the Load, Effect of Load Arrangement, Effect of Load Thickness, Vertical Heating, Batch Indirect-Fired Furnaces, Batch Furnace Heating Capacity Practice, Controlled Cooling in or After Batch Furnaces. **8 Hours**

UNIT – II

Heating Capacity of Continuous Furnaces: Continuous Furnaces Compared to Batch Furnaces, Continuous Dryers, Ovens, and Furnaces for <1400 F (<760 C), Continuous Midrange Furnaces, 1200 to 1800 F (650 to 980 C), Sintering and Pelletizing Furnaces, Axial Continuous Furnaces for Above 2000 F (1260 C), Continuous Furnaces for 1900 to 2500 F (1038 to 1370 C), Continuous Liquid Heating Furnaces. **7 Hours**

Saving Energy in Industrial Furnace Systems: Furnace Efficiency, Methods for Saving Heat, Heat Distribution in a Furnace, Furnace, Kiln, and Oven Heat Losses, Heat Saving in Direct-Fired Low-Temperature Ovens, Saving Fuel in Batch Furnaces, Saving Fuel in Continuous Furnaces, Effect of Load Thickness on Fuel Economy, Saving Fuel in Reheat Furnaces, Fuel Consumption Calculation, Fuel Consumption Data for Various Furnace Types, Energy Conservation by Heat Recovery from Flue Gases, Energy Costs of Pollution Control. **8 Hours**

UNIT – III

Operation and Control of Industrial Furnaces: Burner and Flame Types, Location, Flame Fitting, Unwanted NO_x Formation, Controls and Sensors- Care, Location, Zones, Air/Fuel Ratio Control, Furnace Pressure Control Turndown Ratio, Furnace Control Data Needs, Soaking Pit Heating Control, Uniformity Control in Forge Furnaces, Continuous Reheat Furnace Control. **10 Hours**

Course Outcomes:

At the end of the course the student will be able to:

1. Describe the heating process and industrial furnace to outline the construction and classification
2. Describe batch furnaces to study the methods of heat transfer in industries
3. Describe the operation of continuous furnaces to compare with the batch furnaces.
4. Analyze the methods of saving energy to calculate fuel consumption & energy costs in industrial furnace systems
5. Describe the operation of industrial furnaces to control furnaces using sensors.

TEXTBOOK:

1. W. Trinks, "Industrial Furnaces", Wiley, 6th Edition, 2004.

COMPUTER AIDED ELECTRICAL DRAWING			
Course Code	21EEE225	Course Type	PEC
Teaching Hours/Week (L:T:P)	1:0:4	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: DCSM (EE303), TIM (EE402), EPGE (405)**Course Objectives:**

1. To discuss the terminology of DC and AC armature windings.
2. To discuss design and procedure to draw armature winding diagrams for DC and AC machines.
3. To discuss the substation equipment, their location in a substation and development of a layout for substation.
4. To discuss different sectional views of transformers, DC machine, its parts and alternator and its parts.
5. To explain development of sectional views of Transformers, DC machine and alternators using the design data, sketches

UNIT – I

Introduction to CAD: Study of auto CAD graphics package. Exercises on computer aided electrical drawing - single line diagram for a typical substation.

Winding Diagrams:

- (a) Developed Winding Diagrams of D.C. Machines: Simplex Double Layer Lap and Wave Windings.
- (b) Developed Winding Diagrams of A.C. Machines:
- (c) Integral and Fractional Slot Double Layer Three Phase Lap and Wave Windings.
- (d) Single Layer Windings – Un-Bifurcated 2 and 3 Tier Windings, Mush Windings, Bifurcated 3 Tier Windings.

Single Line Diagrams: Single Line Diagrams of Generating Stations and Substations Covering Incoming Circuits, Outgoing Circuits, Busbar Arrangements (Single, Sectionalised Single, Main and Transfer, Double Bus Double Breaker, Sectionalised Double Bus, One and a Half Circuit Breaker Arrangement, Ring Main), Power Transformers, Circuit Breakers, Isolators, Earthing Switches, Instrument Transformers, Surge or Lightning Arresters, Communication Devices (Power- Line Carrier) and Line Trap. **15 Hours**

UNIT – II

Electrical Machine Assembly Drawings Using Design Data, Sketches or Both: Transformers - Sectional Views of Single And Three Phase Core And Shell Type Transformers. **7 Hours**

Electrical Machine Assembly Drawings Using Design Data, Sketches or Both: D.C. Machine - Sectional Views of Yoke with Poles, Armature and Commutator dealt separately. **8 Hours**

UNIT – III

Electrical Machine Assembly Drawings Using Design Data, Sketches or Both: Alternator – Sectional Views of Stator and Rotor dealt separately. **10 Hours**

Course Outcomes:

At the end of the course the student will be able to:

1. Develop armature winding diagram for DC and AC machines
2. Develop a Single Line Diagram of Generating Stations and substation using the standard symbols.
3. Construct sectional views of core and shell types transformers using the design data
4. Construct sectional views of assembled DC AC machine and their parts using the design data or the sketches
5. Construct sectional views of assembled machine and their parts using the design data or the sketches

2. Electrical Engineering Drawing, K. L. Narang, Satya Prakashan, 2014

IV. POWER SYSTEM

HVDC POWER TRANSMISSION			
Course Code	21EEE131	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: PE (20EE504), T&D (20EE406), PSAS (20EE601)

Course Objectives:

1. To introduce concepts of HVDC and HVAC generation transmission and comparison between them.
2. To choose converter and their control configuration for HVDC power transmission and their configuration.
3. To illustrate the bridge converter under different modes of operation
4. To explain the various methods to Control the HVDC converters.
5. To identify different types of protection used for HVDC system.

UNIT – I

General aspects of DC transmission and comparison of it with Ac transmission: Historical sketch, constitution of EHV AC and DC links, Limitations and Advantages of AC and DC Transmission.

8 Hours

Converter circuits: Valve Characteristics, Properties of converter circuits, assumptions, single phase, three phase converters, choice of best circuits for HV DC circuits.

7 Hours

UNIT – II

Analysis of the bridge converter:- Analysis with grid control but no overlap, Analysis with grid control and with overlap less than 60 deg, Analysis with overlap greater than 60 deg, complete characteristics of rectifier, Inversion.

8 Hours

Control of HVDC converters and systems: grid control, basic means of control, power reversal, limitations of manual control, constant current versus constant voltage, desired feature of control, actual control characteristics, constant -minimum -Ignition –angle control, constant –current control, constant –extinction –angle control, stability of control.

8 Hours

UNIT – III

Protection: general, DC reactor, voltage oscillations and valve dampers, current oscillations and anode dampers, DC line oscillations and line dampers, clear line faults and reenergizing the line.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Compare the HVDC and HVAC transmission systems to list out the advantages and disadvantages.
2. Analyze different converter circuits configuration to select best converter configuration for HVDC power transmission
3. Analyze bridge converter for different modes of operation without and with overlap
4. Apply different techniques for control the HVDC converters
5. Describe different types of protection schemes used in HVDC transmission system.

SMART ELECTRIC GRID			
Course Code	21EEE132	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

1. To study the Information and Communication Technologies related to smart grid.
2. To understand the Information security and different sensing and automation techniques.
3. To know the principles of Distribution management systems and transmission system operation for smart equipment's.
4. To study the power quality issues and their management in smart grid
5. To know the importance of micro grids and distributed energy resources.

UNIT – I

The Smart Grid: Introduction, Overview of the technologies required for the Smart Grid.

Information and Communication Technologies: Data communication, Switching techniques, Communication channels, layered architecture and protocols Ethernets, Wireless Lan, Bluetooth and Zigbee communication technology **8 Hours**

Information security for the Smart Grid – Introduction, Encryption and decryption, Authentication, Digital signatures, Cyber security standards **4 Hours**

Sensing, Measurement, Control and Automation Technologies: Smart metering - An overview of the hardware used, Communications infrastructure and protocols for smart metering. **4 Hours**

UNIT – II

Distribution automation equipment and Management systems – Introduction, Data sources and associated external systems, Modelling and analysis tools,

Transmission system operation - Phasor measurement UNIT s, Wide area applications. **8 Hours**

Power electronics in Smart Grid – Introduction, Renewable energy generation, Photovoltaic systems, Wind, hydro and tidal energy systems, Fault current limiting. **8 Hours**

UNIT – III

Power Quality Issues in Smart Grid: Power Quality issues, Power Quality Monitoring in smart Grid: Mitigation Methods, EMC Related Phenomena in Smart Electrical Power Systems, Energy Storage Systems **8 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Identify various Information and Communication Technologies to learn the usage in electric grid.
2. Illustrate the Information security and automation techniques for protection and automation of smart electric grid.
3. Describe the principles of Distribution management systems and transmission system operation for smart equipment's.
4. Illustrate the interfacing of power electronics devices to learn integration renewable energy sources to smart grid.
5. Describe power quality issues, power conditioners and monitor system to monitor the health of smart electric grid.

MODERN POWER SYSTEM PROTECTION			
Course Code	21EEE133	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: PSAS (20EE601), SGP (20EE602)**Course Objectives:**

- To introduce various static relays used in PS protection.
- To illustrate the need of Comparators and list out various comparators and their characteristics.
- To explain the concept of static over current, timer and voltage relays.
- To illustrate the use and implementation of distance relays.
- To explain the Principles of Digital/ Numerical Relays

UNIT – I

Static Relays: Introduction, Basic construction, Classification, Basic Circuits, Smoothing Circuits, Voltage regulation, square wave Generator, Time delay Circuits, Level Detectors, Summation device, Sampling Circuits, Zero crossing detector, output devices. **7 Hours**

Comparators: Replica impedance, Mains Transformers, General equation of phase and Amplifiers, Comparators, Realization of ohm, mho, Impedance and offset impedance characteristics, Dualist principal, Static amplifier comparator – Rectifier bridge circulations current type, sampling comparator, static phase comparator accidente circuits type Rectifier phase comparator, Block split comparator, Zen

or diode phase comparator

8 Hours

UNIT – II

STATIC OVER CURRENT, TIMER AND VOLTAGE RELAYS:

Instantaneous over current Relay, Definite time lay relay, inverse time over current relay, static timer relay, Basic relay circuits, mono stable delay circuits Single phase Instantaneous over voltage and under voltage relays, instantaneous over voltage relay using Op amp.

8 Hours

Distance Relay: general Principal of operation, Zone discrimination, Fault area on impedance diagram, Basic measuring elements, Different characteristics used in distance relaying- Impedance, Reactance, Admittance. Ohm, Distance relay settings, Distance measurement Problems.

8 Hours

UNIT – III

Principles of Digital/ Numerical Relays: Definition of Numerical Protection System, Advantages of Numerical relays, Block diagram of Numerical Relays, Processing UNIT, non-machines Interface, communication in protective relays, Information handling with substation monitoring system.

4 Hours

Digital Relays: Block Schematic approach of microprocessor-based relays, over current relay, Protection Transformer differential protection, Directional relay scheme, Impedance relay scheme.

5 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the basic components to understand the construction and working of static relay
2. Apply general equation phase and amplitude comparators to realize the different relay characteristics.
3. Describe static relay circuits for protection against over current, over voltage and under voltages
4. Analyze different distance relays for zone and directional discrimination.
5. Describe the Principle of operation of Digital/ Numerical Relays utilized in various relay protection schemes.

POWER SYSTEM PLANNING			
Course Code	21EEE134	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: GTD (21EE503), PSAS (21EE601)**Course Objectives:**

1. To discuss primary components of power system planning namely load forecasting, evaluation of energy resources
2. To explain planning methodology for optimum power system expansion, various types of generation, transmission and distribution
3. To discuss evaluation of operating states of transmission system, their associated contingencies and determination of the stability of the system for worst case conditions
4. To discuss reliability criteria for generation, transmission, distribution and reliability evaluation and analysis.
5. To discuss planning and implementation of electric –utility activities designed to influence consumer uses of electricity.

UNIT – I

Power System: Power Systems, Planning Principles, Planning Process, Project Planning, Power Development, Power Growth, National and Regional Planning, Enterprise Resources Planning, Structure of a Power System, Power Resources, Planning Tools, Power Planning Organisation, Regulation, Scenario Planning.

4 Hours

Electricity Forecasting: Load Requirement, System Load, Electricity Forecasting, Forecasting Techniques, Forecasting Modelling, Spatial – Load Forecasting, Peak Load - Forecast, Reactive – Load Forecast, Unloading of a System

4 Hours

Power-System Economics: Financial Planning, Techno – Economic Viability, Private Participation, Financial Analysis, Economic Analysis, Economic Characteristics – Generation UNIT s, Transmission, Rural Electrification Investment, Total System Analysis, Credit - Risk Assessment, Optimum Investment, Tariffs.

4 Hours

Generation Expansion: Generation Capacity and Energy, Generation Mix, Conventional Generation Resources, Nuclear Energy, Clean Coal Technologies, Distributed Power Generation, Renovation and Modernisation of Power Plants. **4 Hours**

UNIT – II

Transmission Planning: Transmission Planning Criteria, Right – of – Way, Network Studies, High – Voltage Transmission, Conductors, Sub – Stations, Power Grid, Reactive Power Planning, Energy Storage. **4 Hours**

Distribution: Distribution Deregulation, Planning Principles, Electricity – Supply Rules, Criteria and Standards, Sub – Transmission, Basic Network, Low Voltage Direct Current Electricity, Upgradation of Existing Lines and Sub – Stations, Network Development, System Studies, Urban Distribution, Rural Electrification, Villages Self – Sufficiency in Energy, CommUNITY Power, Self – Generation. **6 Hours**

Reliability and Quality: Reliability Models, System Reliability, Reliability and Quality Planning, Functional Zones, Generation Reliability Planning Criteria, Transmission Reliability Criteria, Distribution Reliability, Reliability Evaluation, Grid Reliability, Reliability Target, Security Requirement, Disaster Management, Quality of Supply, Reliability and Quality Roadmap. **5 Hours**

UNIT – III

Demand-Side Planning: Demand Response, Demand – Response Programmes, Demand– Response Technologies, Energy Efficiency, Energy - Economical Products, Efficient – Energy Users, Supply – Side Efficiency, Energy Audit. **4 Hours**

Electricity Market: Market Principles, Power Pool, Independent System Operator, Distribution System Operator, Power Balancing, Market Participants, Power Markets, Market Rules, Bidding, Trading, Settlement System, Locational Marginal Pricing, Transmission Charges, Merchant Power, Differential Electricity, Congestion Management, Ancillary Services, Hedging, Smart Power Market. **5 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Describe primary components of power system planning, load forecasting for forecasting of future load requirements of both demand and energy by deterministic and statistical techniques using forecasting tools
2. Apply planning methodology for optimum power system expansion, various types of generation, transmission and distribution
3. Evaluate the operating states of transmission system, their associated contingencies and determination of the stability of the system for worst case conditions
4. Describe reliability criteria for generation, transmission, distribution & reliability evaluation and analysis.
5. Describe the planning and implementation of electric –utility activities designed to influence consumer uses of electricity.

POWER SYSTEM OPERATION AND CONTROL			
Course Code	21EEE135	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: NA (21EE302), GTD (21EE503), PSAS (21EE601), EM2 (21EE501)**Course Objectives:**

- Explain the importance of Control Center and SCADA system in Power system operation.
- Study the operation of Automatic Generation Control system in Power system.
- Understand the generation and absorption of reactive power and methods of voltage control
- Understand the importance and study of various methods of UNIT commitment
- Study the various factors affecting the Power system security and contingency analysis

UNIT – I**CONTROL CENTER OPERATION OF POWER SYSTEMS:**

Introduction to SCADA, control center, digital computer configuration, automatic generation control, area control error, operation without central computers, expression for tie-line flow and frequency deviation, parallel operation of generators.

8 Hours

AUTOMATIC GENERATION CONTROL: Automatic voltage regulator, automatic load frequency control, AVR control loops of generators, performance of AVR, ALFC of single area systems, concept of control area, multi-area systems, POOL operation-two area systems.

8 Hours

UNIT – II

CONTROL OF VOLTAGE AND REACTIVE POWER: Introduction, generation and absorption of reactive power, relation between voltage, power and reactive power at a node, single machine infinite bus systems, methods of voltage control, sub synchronous resonance, voltage stability, voltage collapse.

8 Hours

UNIT COMMITMENT: Statement of the problem, need and importance of UNIT commitment, methods-priority lists method, dynamic programming method, constraints, spinning reserve, and examples.

7 Hours**UNIT – III**

POWER SYSTEM SECURITY Factors affecting power system security, power system contingency analysis, detection of network problems, network sensitivity methods, calculation of network sensitivity factor, contingency ranking.

9 Hours**Course Outcomes:**

At the end of the course student will be able to

1. Describe the control Centre operation of power system to understand the tie line power flow and frequency deviation
2. Analyze the effect of Automatic Voltage Regulator and Automatic Generation Control on Load Frequency Control of single and two area systems
3. Analyze the effect of reactive power control on Voltage stability and voltage collapse at a load bus
4. Apply various methods UNIT commitment for optimum operation of generation systems
5. Analyze the various factors affecting the security power system for contingency ranking.

COMPUTER TECHNIQUES IN POWER SYSTEM ANALYSIS

Course Code:	21EEE136	Course Type:	PEC
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	03
Total Teaching Hours:	40	CIE + SEE Marks:	50+50

Prerequisite: NA (21EE302), GTD (21EE503), PSAS (21EE601), EM2 (21EE501)**Course Objectives:**

1. To introduce the concepts of network topology and graph theory
2. To Formulate the Y Bus and Z Bus
3. To Formulate and solve load flow problem of a power system network.
4. To justify the need of Economic operation of power system

UNIT - I**Network Topology and Matrices****15 Hours**

Introduction, Elementary graph theory –oriented graph, tree, co-tree, basic cut-sets, basic loops; Incidence matrices –Element-node, Bus incidence, Branch – path, Basic cut-set, Augmented cut-set, Basic loop and Augmented loop; Primitive network – impedance form and admittance form.

Formation of Y_{BUS} – by method of inspection, by method of singular transformation ($Y_{BUS} = A^T [y] A$)

Formulation of Z_{BUS} building algorithm without mutual coupling between the elements by addition of link and addition of branch. Illustrative examples.

UNIT - II**Load Flow Studies****15 Hours**

Introduction, Power flow equations, Classification of buses, Data for load flow, Gauss-Seidel Method – Algorithm and flow chart for PQ and PV buses (numerical problem for one iteration only), Acceleration of convergence; Newton Raphson Method – Algorithm and flow chart for NR method in polar coordinates (numerical problem for one iteration only); Algorithm for Fast Decoupled load flow method; Comparison of Load Flow Methods.

UNIT - III**Economic Operation of Power system****07 Hours**

Introduction, Performance curves, Economic generation scheduling neglecting losses and generator limits, Economic generation scheduling including generator limits and neglecting losses; Iterative techniques; Economic Dispatch including transmission losses – approximate penalty factor, iterative technique for solution of economic dispatch with losses; Derivation of transmission loss formula;

UNIT Commitment**03 Hours**

Introduction, Constraints and UNIT commitment solution by prior list method and dynamic forward DP approach (Flow chart and Algorithm only)

Course Outcomes: At the end of the course student will be able to

1. Apply graph theory concepts to form bus, cut set and loop incidence matrices.
2. Build Y_{bus} and Z_{bus} to model the connected power system network.
3. Apply, compare and analyze various load flow techniques to compute the parameters affecting the power flow at all buses & line flows.
4. Apply various numerical integration techniques to predict system stability.
5. Prepare generation scheduling to operate power system economically.

FLEXIBLE AC TRANSMISSION SYSTEMS (FACTS)			
Course Code	21EEE231	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: PE (21EE504), GTD (21EE503), PSAS (21EE601)

Course Objectives:

1. Explain and understand the concept of various FACTS Controllers for power flow control
2. Study the requirement and importance of different High-power Semiconductor devices and VSC for control of power Flow
3. Study the application and control of self and line commutated current source Converters
4. Study the control of shunt compensation by passive and active shunt FACTS controllers for enhancement of power transfer capability and damping of power oscillations.
5. Study the application of series FACTS controllers for controlling / routing the power through the desired transmission paths

UNIT – I

FACTS Concepts and general system configuration: Transmission, interconnection, flow of power in AC system, power flow and dynamic stability consideration, of a transmission interconnection, relative importance of controllable parameters, basic types of FACTs controllers, shunt, series, combined shunt and series connected controllers.

10 Hours

UNIT – II

POWER SEMICONDUCTOR DEVICES: Types of high power devices, principle of high power device characteristics and requirements, IGBT and GTO devices.

3 Hours

VOLTAGE SOURCED CONVERTERS: Basic concepts, single phase full wave bridge converter operation, and square wave voltage harmonics for a single-phase bridge 3 phase full wave bridge converter.

4 Hours

SELF AND LINE COMMUTATED CURRENT SOURCE CONVERTER: Basic concepts, 3 phase full wave diode rectifier, thyristor-based converter, current sourced converter with turnoff devices, Current sourced versus voltage source converter.

5 Hours

SHUNT COMPENSATION: Objectives, Midpoint voltage regulation for line segmentation, End of line voltage support to prevent voltage instability, Improvement of transient stability, power oscillation damping.

3 Hours

UNIT – III

STATIC SHUNT COMPENSATOR SVC AND STATCOM: Methods of controllable VAR generation, static VAR compensator, STATCOM, comparison between SVC and STATCOM.

7 Hours

STATIC SERIES COMPENSATORS: Objectives of series compensation; variable impedance type of series compensation, GCSC, TSSC, TCSC. Switching converter type series compensation- SSSC, external

control for series reactive compensators, application of static series compensation for improvement of transient stability and power oscillation damping.

8 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe various FACTS controllers required for control of active and reactive power flow in a transmission network.
2. Compare various High-power Semiconductor devices and analyze the working of Voltage Sourced Converters (VSC) and Current Sourced Converters (CSC) for active and reactive power flow control.
3. Design Shunt compensation schemes for the improvement of transient stability and damping of power oscillations
4. Analyze the working of static shunt compensation schemes using SVC and STATCOM for voltage and reactive power control
5. Analyze various series compensation schemes using variable impedance and VSC based series FACTS controllers for controlling / routing the power through the desired transmission paths.

AI APPLICATIONS TO POWER SYSTEMS			
Course Code	21EEE232	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: PSAS (21EE601)

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To study the Difference between Algorithmic based methods and knowledge based methods
2. To understand the use of the soft computing techniques for voltage control problems.
3. To know the appropriate AI framework for solving power system protection problems.
4. To study the different AI techniques for demand forecasting
5. To know the Adaptive AI techniques in the power system protection and control

UNIT – I

Introduction: Definition of AI difference between soft computing techniques and hard computing systems, expert systems brief history of ANN, Fuzzy and GA.

3 Hours

Fuzzy logic and Hybrid systems: Concept of Fuzzy in Power system, Fuzzy Techniques and Applications in power system.

4 Hours

Comparison among various Artificial Intelligence Techniques: ANN, Fuzzy, Evolutionary algorithms, Expert systems. Hybrid systems: Fuzzy expert system Hybrid, Neural Network system Hybrid. Application in Power system.

4 Hours**Artificial Intelligence techniques for voltage control:**

Introduction, Algorithm methods, Voltage collapse monitoring, Reactive power management, Combined active and reactive dispatch. AI techniques for Voltage control

4 Hours**UNIT – II**

AI Techniques for protection systems: Introduction: An expert system for Protective relaying settings, Fuzzy logic for power system protection. Artificial neural network in phase selection.

2 Hours

Artificial Neural network for static security assessment: Introduction to power system security assessment, AI techniques to power system security assessment- Fuzzy techniques, ANN

3 Hours

A supervised ANN for power system security prediction: ANN Architecture, Training set selection, A new prediction performance measure, ANN performance evaluation.

3 Hours

Intelligence systems for demand forecasting: Introduction, stages in building a forecast model, Identifying the model, survey of intelligence system for demand forecasting.

8 Hours**UNIT – III**

A practical application and implementation of adaptive techniques using neural networks into auto-reclose protection and system control: Introduction, Auto recloser description: conventional scheme, Adaptive reclose description, neural network description, system simulation, fault records,

feature extraction, Neural Network training, Neural Network testing.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. List the various soft computing and hard computing techniques to apply in power system
2. Compare different AI techniques to choose an appropriate methods for voltage control in power system
3. Select appropriate AI framework for solving power system protection problems.
4. Describe various AI techniques for demand forecasting.
5. Describe the Adaptive AI techniques to apply in power system protection and control

POWER SYSTEM DYNAMICS AND STABILITY			
Course Code	21EEE233	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: PSAS (21EE601), ELECTRICAL MACHINES 2 (21EE501)

Course Objectives:

1. To understand the system modelling and dynamics of synchronous generator
2. To model the load connected to power system and analyze its small signal stability
3. To introduce various excitation and prime mover controllers
4. To model various prime movers
5. To carry out transient analysis of power system and understand the importance of stability controllers

UNIT – I

System Modeling and Dynamics of Synchronous Generator: Basic concepts, Review of classical methods, modeling of synchronous machine, Swing equation, Park's transformation – Park's voltage equation, Park's mechanical equation (torque). Applications– (a) Voltage build up in synchronous machine, and (b) Symmetrical short circuit of generator. Solution for transient analysis, Operational impedance, Relationship between T_{do}' and T_{do}''

8 Hours

Load Modeling: Introduction, Two approaches – Polynomial model and Exponential model. Small Signal Angle Stability: Small signal angle stability with SMIB system, detailed model of SMIB

7 Hours

UNIT – II

Excitation and Prime Mover Controllers: Introduction, Types of excitation, AVR with and without ESS, TGR, Amplifier PSS, Static exciters.

8 Hours

Modeling of Prime Movers: Introduction, Three major components, Block diagram, Hydraulic turbine, Steam turbine.

8 Hours

UNIT – III

Transient Stability Analysis: Simulation for Transient stability Evaluation, Transient stability controllers.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Model the synchronous generator for understanding its dynamics.
2. Apply techniques to model the load to understand the dynamics of load and SMIB system.
3. Describe the concept of excitation and prime mover controllers used in the voltage regulation.
4. Describe the various components to model the prime mover.
5. Perform the transient stability analysis to understand the importance of stability controller.

REACTIVE POWER MANAGEMENT			
Course Code	21EEE234	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: NA (21EE302), GT&D (21EE406), PSAS (21EE601)

Course Objectives:

- To introduce the concept of reactive power, its generation and absorption in power system.
- To illustrate various methods of voltage or reactive power control.
- To demonstrate the principle of transmission system compensation, Effect of harmonics on reactive power control.
- To comprehend the concept of resonance, shunt capacitors and filters.
- To explain the reactive power coordination techniques.

UNIT – I

Introduction, Importance of reactive power control in Electrical Power System, Generation and

absorption of Reactive power, Relation between Voltage, Power and Reactive power at a node.

9 Hours

Methods of voltage or Reactive power control: Shunt reactor, Shunt capacitor, Series capacitor, Synchronous condenser, Static VAR system

8 Hours

UNIT – II

Principles of Transmission system compensation, Effect of Harmonics on reactive power control: Harmonic sources.

8 Hours

Resonance, Shunt capacitors and Filters, Telephonic Interference.

7 Hours

UNIT – III

Reactive power coordination: Reactive power management, Transmission benefits, Reactive power dispatch and equipment impact.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the importance of reactive power, its generation and absorption in power system.
2. Analyze methods utilised to control the voltage or reactive power.
3. Describe the compensation techniques and effect of harmonics on reactive power in a transmission system.
4. Analyse effect of shunt capacitors, filters and telephonic interference on transmission system.
5. Describe the reactive power coordination techniques to manage the reactive power in a system.

ELECTRICAL ESTIMATION AND COSTING			
Course Code	21EEE235	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

1. To discuss market survey, estimates, purchase enquiries, tenders, comparative statement and payment of bills and Indian electricity act and some of the rules.
2. To discuss distribution of energy in a building, wiring and methods of wiring, cables used in internal wiring, wiring accessories, fittings and fuses.
3. To discuss design of lighting points and its number, total load, sub-circuits, size of conductor and different types of service mains and estimation of power circuits.
4. To discuss estimation of overhead transmission and distribution system and its components.
5. To discuss main components of a substation, their graphical representation and preparation of single line diagram of a substation.

UNIT – I

Principles of Estimation: Introduction to Estimation and Costing, Electrical Schedule, Catalogues, Market Survey and Source Selection, Recording of Estimates, Determination of Required Quantity of Material, Labour Conditions, Determination of Cost Material and Labour, Contingencies, Overhead Charges, Profit, Purchase System, Purchase Enquiry and Selection of Appropriate Purchase Mode, Comparative Statement, Purchase Orders, Payment Of Bills, Tender Form, General Idea about IE Rule, Indian Electricity(IE) Act and IE Rules -29,30,45,46,47,50,51,54,55,77 and79.

6 Hours

Wiring: Introduction, Distribution of energy in a Building, PVC Casing and Capping, Conduit Wiring, Desirabilities of Wiring. Types of cables used in Internal Wiring, Multi Strand Cables, Voltage Grading and Specification of Cables

Main Switch and Distribution Board, Conduits and its accessories and Fittings. Lighting Accessories and Fittings, Types of Fuses, Size of Fuse, Fuse UNIT s, Earthing Conductor.

6 Hour

Internal Wiring: General rules for wiring, Design of Lighting Points (Refer to Seventh Chapter of the TEXTBOOK), Number of Points, Determination of Total Load, Number of Sub –Circuits, Ratings Main Switch and Distribution Board and Size of Conductor. Current Density, Layout.

4 Hours**UNIT – II**

Service Mains: Introduction, Types, Estimation of Underground and Overhead Service Connections.

5 Hours

Design and Estimation of Power Circuits: Introduction, Important Considerations Regarding Motor Installation Wiring, Input Power, Input Current to Motors, Rating of Cables, Rating of Fuse, Size of

Condit, Distribution Board Main Switch and Starter.

4 Hours

Estimation of Overhead Transmission and Distribution Lines: (Review of Line Supports, Conductor Materials, Size of Conductor for Overhead Transmission Line, Types of Insulators) [No Question Shall be Set From the Review Portion].

Cross Arms, Pole Brackets and Clamps, Guys and Stays, Conductors Configuration Spacing and Clearances, Span Lengths, Lightning Arrestors, Phase Plates, Danger Plates, Anti Climbing Devices, Bird Guards, Beads of Jumpers, Muffs, Points to be Considered at the Time of Erection of Overhead Lines, Erection of Supports, Setting of Stays, Fixing of Cross Arms, Fixing of Insulators, Conductor Erection. Repairing and Jointing of Conductors, Dead End Clamps, Positioning of Conductors and Attachment to Insulators, Jumpers, Tee-Offs, Earthing of Transmission Lines, Guarding of Overhead Lines, Clearances of Conductor from Ground, Spacing Between Conductors, Important Specifications.

6 Hours

UNIT – III

Estimation of Substations: Main Electrical connection, Graphical Symbols for Various Types of Apparatus and Circuit Elements on Substation main Connection Diagram, Single Line Diagram of Typical Substations, Equipment for Substation, Substation Auxiliaries Supply, Substation Earthing.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Explain the purpose of estimation and costing.
2. Discuss market survey, estimates, purchase enquiries, preparation of tenders, comparative statements and payment of bills to know about the process of estimation.
3. Discuss the distribution of energy in a building, wiring and methods of wiring, cables used in internal wiring, wiring accessories and fittings, fuses and types of fuses to be installed in a building.
4. Discuss design of lighting points, total load, sub-circuits and size of conductor of conductor to estimate its cost.
5. Discuss overhead transmission and distribution system and its components to estimate its cost. Discuss main components of a substation to prepare the single line diagram, earthing and estimation of a substation.

ELECTROMAGNETIC FIELDS

Course Code:	21EEE236	Course Type	PEC
Teaching Hours/Week (L:T: P: J)	3:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50

Teaching Department: Electrical & Electronics Engineering

Course Objectives:

1.	To study the application of Coulomb's Law and Gauss Law for electric fields produced by different charge configurations.
2.	To evaluate the energy and potential due to a system of charges
3.	To study the behavior of electric field across a boundary between a conductor and dielectric and between two different dielectrics
4.	To study the magnetic fields and magnetic materials
5.	To study the time varying fields and propagation of waves in different media

UNIT – I**Coulomb's Law and Electric field intensity****06 Hours**

Experimental law of coulomb, Electric field intensity, Field due to continuous volume charge distribution, Field of a line charge (only theory).

Electric flux density, Gauss's law and Divergence**06 Hours**

Electric flux density, Gauss's law and Divergence, Vector operator ∇ and Divergence theorem.

Energy and Potential**06 Hours**

Energy expended in moving a point charge in an electric field, the line integral, Definition of Potential difference and Potential, the potential field of a point charge and system of charges, Potential gradient.

Conductors**02 Hours**

Current and current density, Continuity of current, Metallic Conductors, Conductor properties and boundary conditions.

UNIT – II**Dielectrics and Capacitance****03 Hours**

Boundary conditions for perfect dielectrics, Capacitance.

Poisson's and Laplace's equations**03 Hours**

Derivation of Poisson's and Laplace's equations.

MOS Amplifiers The steady magnetic field**07 Hours**

Biot – Savart's law, Ampere's circuital law, curl, Stokes theorem, Magnetic flux and magnetic flux density, Scalar and vector magnetic potentials.

Magnetic forces, Magnetic Materials and Inductance**07 Hours**

Force on a moving charge, Magnetic boundary conditions, Inductance.

UNIT – III**Time varying fields and Maxwell's equations****06 Hours**

Faraday's law, Displacement current, Maxwell's equation in point and integral form.

Transmission Lines**04 Hours**

Physical description of Transmission line propagation, Transmission line equations, Lossless propagation, Lossless propagation of sinusoidal voltages, voltage standing wave ratio.

Course Outcomes: At the end of the course student will be able to

1. State and apply the Coulomb's, Gauss's Law to determine the electric field intensity resulting from various charge distributions.
2. Describe the electric potential to compute electric field intensity and analyze the boundary conditions for various interfaces to understand the variation in electric field intensity.
3. Apply Poisson's and Laplace's equations to calculate capacitance of various geometries and apply Biot- Savart's, Ampere's Law to compute magnetic field intensity.
4. Apply the concept of magnetic forces, boundary conditions and Maxwell's equations to determine inductance and parameters of time varying fields.
5. Describe plane wave reflection and transmission at the boundaries to study the wave propagation and skin effect.

V. MICROELECTRONICS

ARM SYSTEM ARCHITECTURE			
Course Code	21EEE141	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: MC (20EE403)

Course Objectives:

1. To introduce the architecture, internal functioning and assembly instructions of ARM core
2. To comprehend the functionality, interfacing, and programming of ARM core
3. To understand the floating-point representation and VFP coprocessor implementation
4. To outline details of cache architectures, AMBA bus, virtual memory management concepts with the detailed explanation on the Memory Management UNIT (MMU) and Memory Protection UNIT (MPU)
5. To illustrate the overview of various peripherals used with ARM core and review of big. LITTLE technology for various ARM processor

UNIT – I

ARM Introduction and Pipeline structures: Types of computer Architectures, ISA's and ARM history. Embedded system software and hardware, stack implementation in ARM, endianness, and condition codes. Processor core vs CPU core, ARM7TDMI interface signals, memory interface, Bus cycle types, Register set, Operational modes. Instruction format, ARM Core data model, ARM 3 stage pipeline, ARM family attribute comparison. ARM 5 stage pipeline, Pipeline hazards, Data forwarding - a hardware solution.

8 Hours

ARM7TDMI assembly instructions and modes: ARM ISA and Processor variants, Different types of instructions, ARM instruction set, data processing instructions. Shift operations, shift operations using RS lower byte, Immediate value encoding. Data processing instructions. Addressing Mode-1, Addressing Mode -2. Addressing Mode -2, LDR/STR, Addressing mode -3 with examples. Instruction timing, Addressing Mode - 4 with examples. Swap instructions, Swap register related instructions, Loading constants. Program control flow, Control flow instructions, B & BL instructions, BX instruction. Interrupts and Exceptions, Exception Handlers, Reset Handling. Aborts, software Interrupt Instruction, undefined instruction exception. Interrupt latency, Multiply instructions, and Instruction set examples. Thumb state, Thumb programmers model, Thumb implementation, Thumb applications. Thumb instructions, Interrupt processing. Interrupt handling schemes, Examples of interrupt handlers.

8 Hours

UNIT – II

ARM Coprocessor interface and Vector Floating Point Processor (VFP) ARM coprocessor interface and instructions, Coprocessor instructions, data processing instruction, data transfers, register transfers. Number representations, floating point representation (IEEE754). Flynn's taxonomy, SIMD and Vector processors, VFP and ARM interactions, An example vector operation.

8 Hours

Cache and Memory Management and Protection: Memory technologies, Need for memory hierarchy, Hierarchical memory organization, Virtual memory. Cache memory, Mapping functions, Cache design, Unified or split cache, multiple level of caches, ARM cache features, coprocessor 15 for system control. Processes, memory map, protected systems, ARM systems with MPU, Memory Protection UNIT (MPU). Physical Vs virtual memory, Paging, Segmentation. MMU Advantage, virtual memory translation, Multitasking with MMU, MMU organization, Tightly Coupled Memory (TCM).

8 Hours

UNIT – III

ARM tools and peripherals ARM development environment, Arm Procedure Call Standard (APCS), example C program. Embedded software development, image structure, linker inputs and outputs, memory map, application startup. AMBA overview, typical AMAB based microcontroller, AHB bus features, AHB bus transfers, APB bus transfers, APB bridge. DMA, Peripherals, Programming peripherals in ARM. big. LITTLE technology ARM ISAs, ARMv5, ARMv6, ARM v7, ARMv8.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe architecture, internal functioning and assembly instructions of ARM7TDMI to comprehend basics of ARM
2. Apply ARM7 based assembly level programming skills to perceive the various coprocessors interfaced in an SoC.
3. Describe the cache design, virtual memory, memory protection concepts to visualise the implementation in a typical SoC designs
4. Describe AMBA bus architecture, various HW peripherals in SoCs to build their design aspects
5. Apply processor software tool chains for embedded software solution development

ANALOG AND MIXED SIGNAL LAYOUT			
Course Code	21EEE142	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: VLSI Circuits & Design (20EE604)

Course Objectives:

1. To understand CMOS process and its construction
2. To introduce various types of matching and mismatches
3. To illustrate floor-planning and power routing
4. To introduce sensitivity, reliability & failure mechanism
5. To comprehend ESD & types of packaging

UNIT – I

CMOS Process Overview: Silicon deposition, Photolithography, Diffusion/Ion Implantation, Metalization, Formation of devices

Device Construction: PMOS, NMOS, Drain extended MOS, Diodes, Bipolars, Resistors, Capacitors

Matching: Matching and Mismatches in detail, Types of Matching and its usage, Resistor Matching, Capacitor matching

Isolation: Need for isolation: Noise in substrate, Guardring /Substrate connections, Integration of analog and digital blocks

15 Hours

UNIT – II

Floor-planning: Area Estimation, Module level (Understanding Hierarchy features), Block Level. Bbox concept, UNIT / Half cell concept, Pin Placement

Power Routing: Planning Power, Power to Devices, Star connection

Sensitivity: Shielding sensitive signals, routing clk /high frequency signals, DBKs

Reliability and Failure mechanism: Electromigration, Antenna effect, Latch up, Density.

15 Hours

UNIT – III

ESD Care-about: I/O cells ESD event, CDM Clamp

Packaging: Types of packaging, BGA, FLIP CHIP, WCSP

10 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the CMOS process overview to elicit device construction
2. Identify the device matching and isolation with respect to CMOS devices
3. Apply floor planning and power routing to design analog CMOS devices
4. Identify sensitivity, reliability and failure mechanism to erudite electro-migration, antenna effect, and latch up, density issues in CMOS.
5. Describe the ESD and packaging details to comprehend application of CMOS

VLSI CIRCUITS AND DESIGN			
Course Code	21EEE143	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Prerequisites: LD (20EE305), AEC(20EE304)**Course Objectives:**

- To introduce the VLSI Technology, its components and characteristics.
- To examine the electrical characteristics of MOS transistors.
- To demonstrate the design procedure, rule to be followed and the concept of MOSFET Scaling in VLSI.
- To illustrate the Geometry Effects and characteristics of MOS Inverters and universal gates.
- To discuss advanced techniques and applications to CMOS logic circuits.

UNIT – I

CMOS Processing: Introduction to IC Technology, Moore's law, VLSI design flow, VLSI Technology, Wafer fabrication process using Czochralski method, Photolithography, Well and Channel Formation,

Gate oxide, Gate and Source/Drain formation, Contact & Metallization, fabrication of nMOS Transistor, Depletion type and Enhancement type MOS, CMOS n-well and P-well process, twin tub process, BiCmos

7 Hours

MOS TRANSISTORS (Electrical Characteristics) : Two terminal MOS structure, flat band voltage, MOS system under external bias, structure and operation of MOS transistors, threshold voltage, drain to source current I_{ds} versus V_{ds} relationships, body effect, channel length modulation, mobility variation, Tunneling, punch through, hot electron effect MOS, models, small signal AC Characteristics

8 Hours

UNIT – II

Design: Mask Layer, Stick Diagram, Symbolic diagram, Sheet resistance, capacitance layer, inverter delays, rise time, fall time, cascading and super buffer. RC delay model, Linear Delay Model, Logical effort, Parasitic Delay, Design Rules

4 Hours

Scaling: MOSFET scaling and geometry effects: Introduction, constant field scaling, constant voltage scaling, short channel Effects, narrow channel effects, Comparison of MOSFET parameters due to scaling

4 Hours

Application-MOS Inverters Static Characteristics: Introduction, voltage transistor characteristics, noise immunity and noise margin, power and area considerations, resistive load inverter calculation of V_{oh} , V_{ol} , V_{il} , V_{ih} , inverters with n type MOSFET load (enhancement, depletion) characteristics, CMOS inverter static characteristics(excluding derivation) design of CMOS inverter, latch up bulk CMOS

8 Hours

UNIT – III

Application- 2 input NOR and NAND gates: MOS based 2 input NOR and NAND gate (with derivation), CMOS based 2 input NOR and NAND gate (excluding derivation)

Application- Other Forms Of CMOS Logic: Pseudo nMOS logic, dynamic CMOS logic, clocked CMOS logic, CMOS domino logic, parity generator, multiplexer, dynamic shift registers.

8 Hours

Course Outcomes:

At the end of the course student will be able to

1. Illustrate the CMOS VLSI design flow to outline the CMOS IC fabrication process
2. Analyze the structure, operation of MOS transistor to study the electrical characteristics.
3. Use layout design rules to sketch CMOS logic circuits & compare effect of scaling on MOSFET parameters.
4. Analyze MOS static characteristics to design the NMOS and CMOS inverter circuits.
5. Design logic circuits using MOS transistors to study the IC fabrication aspects.

EMBEDDED SYSTEMS			
Course Code	21EEE241	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: LD(20EE305), MC (20EE403)

Course Objectives:

- To familiarize the concept of embedded system
- To identify various processing elements of embedded system and their structure
- To introduce various memory elements used in embedded systems
- To understand various interfacing devices used with embedded systems
- To introduce the concept of Real Time Operating Systems

UNIT – I

Introduction: Embedded systems overview-design challenge-optimizing metrics-processor technology-IC technology- design technology- automation- synthesis- verification: hardware /software co-simulation, trade-offs. **8 Hours**

Processing Elements: Custom single purpose processor design-RT level custom single purpose processor design-optimizing custom single purpose processors -General purpose processor's software: architecture, operation, programmer's view and development environment – ASIPs - selecting a microprocessor - general purpose processor design. **8 Hours**

UNIT – II

Memory: Introduction-memory write-ability and storage permanence, common memory types-composing memory-memory hierarchy and caches-advanced RAM. **7 Hours**

Interfacing: Introduction-communication basics-microprocessor interfacing: I/O addressing, interrupts, DMA-Arbitration- multilevel bus architectures-advanced communication principles-serial protocols-parallel protocols-wireless protocols-Standard single purpose processor's peripherals: timers, counters, watchdog timers, UART, PWM, LCD controllers, keypad controllers, stepper motor controllers, ADC and RTC. **9 Hours**

UNIT – III

Introduction to Real-Time Operating Systems: Software architectures, Hard and soft real time systems, Basic functions of RTOS kernel, tasks and states, tasks and data, semaphores and shared data, Message Ques, Mailboxes and Pipes **9 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Describe the overview of embedded system to comprehend associated technologies
2. Analyse various processing element in an embedded system to develop optimum design
3. Identify the necessity of memory devices to comprehend use in embedded system
4. Describe peripherals associated with embedded system to interface various modules
5. Describe architecture of RTOS to comprehend functional capabilities of RTOS

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: LD (20EE305)

Course Objectives:

- To understand basic concepts of hardware description languages
- To apply computer-aided design tools for design of complex digital logic circuits
- To model, simulate, verify, and synthesize with hardware description languages
- To understand the architectural features of Verilog
- To design digital systems using VHDL and Verilog

UNIT – I

Basic concepts of hardware description languages. Hierarchy, concurrency, logic and delay modelling. Structural data-flow and behavioural styles of hardware description. Architecture of event driven simulators. Syntax and semantics of VHDL. Variable and signal types, arrays and attributes, Operators, expressions and signal assignments.

15 Hours

UNIT – II

Entities, architecture specification and configurations, Component instantiation, Concurrent and sequential constructs, Use of Procedures and functions, Examples of design using VHDL.

8 Hours

Syntax and semantics of Verilog, Variable types, arrays and tables, operators, expressions and signal assignments, Modules, nets and registers, Concurrent and sequential constructs, Tasks and functions

8 Hours**UNIT – III**

Modelling flip-flops using VHDL, VHDL models for a multiplexer, Compilation & simulation of VHDL code, Modeling a sequential machine, variables, signals and constants, Arrays, VHDL operators, VHDL functions & procedures, Packages and libraries, VHDL model for a counter. Examples of design using Verilog, Synthesis of logic from hardware description

9 Hours**Course Outcomes:**

At the end of the course student will be able to

1. Describe basic concepts of hardware description language to write program using HDL
2. Apply programming skills to design digital logic circuits using HDL
3. Describe synthesizable program using HDL to design digital logic circuits
4. Describe the architectural features of Verilog to write program using HDL
5. Apply VHDL and Verilog to design digital system

INTRODUCTION TO ASIC AND FPGA DESIGN			
Course Code	21EEE243	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To study the design flow of different types of ASIC
2. To familiarize the different types of programming technologies and logic devices
3. To learn the architecture of different types of FPGA
4. To understand partitioning, floor planning, placement and routing including circuit extraction of ASIC
5. To analyse the synthesis, Simulation and testing of digital systems.
6. To understand the importance and applications of SOC.

UNIT – I

OVERVIEW OF ASIC AND PLD: Types of ASICs - Design flow – CAD tools used in ASIC Design – Programming Technologies: Antifuse – static RAM – EPROM and EEPROM technology, Programmable Logic Devices : ROMs and EPROMs – PLA–PAL. Gate Arrays – CPLDs and FPGAs

8 Hours

ASIC PHYSICAL DESIGN: System partition -partitioning - partitioning methods – interconnect delay models and measurement of delay - floor planning -placement – Routing : global routing - detailed routing - special routing - circuit extraction – DRC

8 Hours**UNIT – II**

LOGIC SYNTHESIS, SIMULATION AND TESTING: Design systems - Logic Synthesis - Half gate ASIC - schematic entry - low level design language - PLA tools -EDIF- CFI design representation. Verilog and logic synthesis -VHDL and logic synthesis - types of simulation -boundary scan test – fault simulation - automatic test pattern generation.

8 Hours

FPGA: Logic blocks, routing architecture, design flow technology - mapping for FPGAs, XilinxXC4000 - ALTERA's FLEX 8000/10000, ACTEL's ACT-1,2,3 and their speed performance Case studies: Altera MAX 5000 and 7000 - Altera MAX 9000 – Spartan II and Virtex II FPGAs - Apex and Cyclone FPGAs.

8 Hours

UNIT – III

SOC DESIGN: Design methodologies – Processes and flows - Embedded software development for SOC – Techniques for SOC testing –configurable SOC – hardware / software codesign Case studies: Digital camera, Bluetooth radio / modem, SDRAM and USB.

8 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the design flow to identify different types of ASIC
2. Apply different types of programming techniques to design logic devices
3. Apply logic synthesis, simulation and testing to design digital systems
4. Analyse various manufacturer FPGA to write program for given application
5. Describe embedded software development to design applications of SOC.

VI.IT & MANAGEMENT COURSES

OBJECT ORIENTED PROGRAMMING USING C++			
Course Code	21EEE151	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Prerequisites: Programming for Problem Solving (19CS111)

Course Objectives:

1. To study the concept of Object Oriented programming and its realization in C++.
2. To discuss the concept of functions and classes.
3. To illustrate the concepts of objects constructors and destructors
4. To understand the meaning of operator overloading type conversion and inheritance.

UNIT – I

Principles of Object-Oriented Programming: Review of Procedure Oriented Programming, Basic concepts of Object Oriented Programming – Object, Class, Encapsulation, Inheritance, Polymorphism; Benefits of OOPs, Applications of OOP's. **3 Hours**

The Basic Language C++: A comparison of C and C++, Structure of C++ program with Class, Preprocessor directives, C++ Statements – Input/Output, Comments, Tokens, Keywords, Identifiers, Constants, Data types – string, pointer, reference, boole, enumeration, array, complex number; typedef names, type compatibility, type conversion, qualifier – const, volatile; Operators in C++, Operator Precedence; C++ expressions – New and Delete. **5 Hours**

Functions in C++: Introduction, The main() function, Function prototype, Call by reference, Return by reference, Inline functions, Default arguments, const Arguments, Function Overloading **3 Hours**

Classes: Introduction – declaration and definition of a Class, defining member functions, C++ program with a Class, Making an outside function Inline, Nesting of member functions, Arrays within a class, Static data members, static member functions. **4 Hours**

UNIT – II

Objects: global & local objects, scope & lifetime, memory allocation for objects, dynamically allocated objects, pointers to objects, arrays of objects, function arguments with objects, returning objects; const member functions, pointer to members. **4 Hours**

Constructors and Destructors: Introduction, Constructors, Parameterized Constructors, Multiple constructors in a class, Constructors with default arguments, Dynamic initialization of objects, Copy constructor, Constructing two-dimensional arrays, const Objects, Destructors. **4 Hours**

Operator Overloading and Type Conversion: Introduction, Defining operator overloading, Overloading unary operators, Overloading binary operators, Overloading binary operators using Friends, Rules for overloading operators, overloading a comma operator, overloading the output operator , Type conversion. **5 Hours**

Inheritance: Introduction, Defining derived classes, Single inheritance, Making a private member Inheritable, Multilevel inheritance, Multiple inheritance, Hierarchical inheritance, Hybrid inheritance, Virtual base classes, Abstract classes. **3 Hours**

UNIT – III

Pointer, Virtual Functions and Polymorphism: Introduction, Pointers, Pointers to Objects, this pointer, Pointers to derived classes, type-checking pointers, pointers to members, Virtual functions, Pure virtual functions. **4 Hours**

Managing Console I/O and File I/O: C++ streams, C++ stream classes, examples of formatted and unformatted I/O operations, Classes for file stream operations, Methods of Opening and Closing a File, Examples of Opening file using constructor open(), file modes (simple programming exercises). **4 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Describe the concept of Object-Oriented Programming and basics of C++ to compare C with C++
2. Apply functions and classes to develop simple programs
3. Apply the concept of constructors to dynamically initialize objects
4. Describe the operator overloading, type conversion and inheritance concepts to develop reliable programs.
5. Apply the concept of pointers, polymorphism and C++ stream classes to use with objects.

Course Outcomes Mapping with Program Outcomes & PSO

DATA STRUCTURE			
Course Code	21EEE152	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

1. To understand the design, analysis of algorithms, Basic data types and trees with reference to data structure.
2. To Illustrate the basic operation on sets and representation of directed graphs
3. To expound the sorting procedure and understand the Algorithm analysis Techniques.
4. To Comprehend the Algorithm Design Techniques.
5. To Demonstrate the use of Data structures and Algorithm for external storage

UNIT – I

Design and Analysis of Algorithms: From problems to programs, Data Structures and Abstract Data types. **3 Hours**

Basic Data Type and Trees: Data types List, Implementation of lists, stacks Queues, Mappings, Stacks and recursive procedures. Basic terminology, ADT Tree, Implementation of trees, Binary trees. **5 Hours**

Basic Operation on Sets: Introduction to sets an ADT with union intersection and difference, A Bit-vector implantation sets, A linked list implementation sets, The dictionary, simple dictionary implementation, the Hash table data structures, Estimating the efficiency of functions, Implementation of the mapping ADT, Priority Queues, Implementation of priority queues **5 Hours**

Directed Graphs: Basic Definitions, Representation for directed graphs, the single source short path problems, Traversals of Directed Graphs, Directed A cyclic graphs, strong components. **4 Hours**

UNIT – II

Sorting: The internal sorting model, simple sorting schemes, Quick sort Heapsort, Binsorting. Algorithm analysis Techniques: Efficiency of algorithms, analysis of receive programs solving Recurrence Equations, A general solution for a large class of Recurrences. **7 Hours**

Algorithm Design Techniques: Divide and conquer algorithms, Dynamic programming, Greedy Algorithms, Back tracking, local search algorithms. **7 Hours**

UNIT – III

Data structures and Algorithm for external storage: A model of external computation, External sorting, sorting information in files, external search Trees. **9 Hours**

Course Outcomes:

At the end of the course student will be able to

1. Analyse algorithms to implement various basic data types and trees.
2. Apply basic operations on sets and representation of directed graphs to build trees for database queries.
3. Analyse the various sorting techniques.
4. Develop and implement various algorithm design techniques
5. Demonstrate the use of Data structures and Algorithms for external storage.

TOTAL QUALITY MANAGEMENT			
Course Code	21EEE153	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

This Course will enable students to

1. Understand the meaning of quality and the development of quality terminology and explain the principles of TQM.
2. Compute mean, median, mode and standard deviation and calculate area under the normal distribution and relate it to the quality concept.
3. Compute control limits for a variable chart and draw the X bar and R chart limits for attribute chart and draw p, np, c and u charts.
4. Explain the Acceptance Sampling plans and understand the concept of Design of Experiments

UNIT – I

Introduction: The Meaning of Quality and Quality Improvement; Statistical Methods for Quality Control and Improvement;

TOTAL Quality Management: Definition, Principles of TQM, Gurus of TQM, Benefits of TQM.

Principles of TQM: Leadership - Deming's philosophy, Customers' satisfaction - Customers perception, Feedback, Employee involvement - quality circles, Continuous Improvement- Juran's Trilogy, PDSA cycle, Kaizen, Six sigma, ISO-9000, ISO-14000, ISO-18000 series of standards.

Modeling Process Quality: Mean, Median, Mode, Standard deviation, calculating area, Normal distribution tables, Finding the Z score, Central limit theorem, 7 QC tools.

Methods and Philosophy of Statistical Process Control: Chance and assignable causes, Statistical Basis of the Control Charts (basic principles, choices of control limits, significance of control limits, sample size and sampling frequency, rational subgroups, analysis of pattern on control charts, warning limits, Average Run Length-ARL).

15 Hours**UNIT – II**

Control Charts for Variables: Control Charts for X-Bar and R- Charts, Type I and Type II errors, the probability of Type II error. Simple Numerical Problems.

Process Capability: The foundation of process capability, Natural Tolerance limits, c_p – process capability index, c_{pk} , p_p – process performance index, summary of process measures. Numerical problems.

Control Charts for Attributes: Binomial distribution, Poisson distribution (from the point of view of Quality control) Control Chart for Fraction Nonconforming, Control Chart for number Nonconforming, Control Charts for Nonconformities or Defects, Control Chart for Number of non-conformities per UNIT. Numerical problems.

15 Hours**UNIT – III**

Lot-By-Lot Acceptance Sampling for Attributes: The acceptance sampling problem, single sampling plan for attributes, Double, Multiple, and Sequential sampling, AOQL, LTPD, OC curves, Numerical problems.

Introduction to Design of Experiments: Hypothesis testing, one sample t-test, orthogonal design of

experiments, two factor experimental design, numerical problems on the above topics.

10 Hours

Course Outcomes (CO):

At the end of the course the student will be able to

1. Understand the concept of quality and evolution of quality concepts over the years
2. Apply statistical concepts for solving simple quality problems.
3. Draw and analyze control charts for variables.
4. Understand the basic concepts of Acceptance Sampling and Design of experiments.
5. Draw and analyze the control chart for attributes

FUNDAMENTALS OF PYTHON PROGRAMMING			
Course Code	21EEE251	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To write a simple python program with emphasis on syntax and semantics
2. To write simple programs utilizing Lists, Tuples and Dictionaries.
3. To write simple program by choosing appropriate conditional operator.
4. To write simple program consisting of user defined functions.
5. To study the concept of object oriented programming in python.

UNIT – I

The Context of Software Development: Software, Development Tools, Learning Programming with Python, Writing a Python Program, The Python Interactive Shell

Data, Expressions, Statements: Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points

Control Flow, Functions: Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional; Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion;

15 Hours

UNIT – II

Strings: Strings: string slices, immutability, string functions and methods, string module; Lists as arrays

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters;

Tuples: tuple assignment, tuple as return value;

Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram

Illustrative programs: square root, GCD, exponentiation, sum an array of numbers, linear search, binary search

15 Hours

UNIT – III

Python Object Oriented Programming: Concept of class, object and instances, Constructor, class attributes and destructors, Inheritance, overlapping and overloading operators, Adding and retrieving dynamic attributes of classes.

10 Hours

Course Outcomes:

The students should be able to:

1. Examine the Python syntax and semantics for writing effective Python program using operators, functions for a given problem statement.
2. Use conditional and switch case statements to write programme in Python to tackle any decision-making scenario.
3. Utilize the methods of Strings and Lists for write a programme for a given application.
4. Utilize the methods of Tuples and Dictionaries for write a programme for a given application.
5. Apply the knowledge OOPs to develop a Python programme using objects and classes.

OPERATING SYSTEM			
Course Code	21EEE252	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Course Objectives:

1. To introduce the operating systems concepts.
2. To explain the concepts of structure in operating systems
3. To discuss the process management and threads in operating systems
4. To understand the memory management and memory allocation in operating systems.
5. To introduce the concept of virtual memory in operating systems with example of UNIX.

UNIT – I

Introduction and Overview Of Operating Systems: Operating system, Goals of an O.S, Operation of an O.S, Resource allocation and related functions, User interface related functions, Classes of operating systems, O.S and the computer system, Batch processing system, Multi programming systems, Time sharing systems, Real time operating systems, distributed operating systems.

8 Hours

Structure of the Operating Systems: Operation of an O.S, Structure of the supervisor, Configuring and installing of the supervisor, Operating system with monolithic structure, layered design, Virtual machine operating systems, Kernel based operating systems, and Microkernel based operating systems.

8 Hours**UNIT – II**

Process Management: Process concept, Programmer view of processes, OS view of processes, Interacting processes, Threads, Processes in UNIX, Threads in Solaris.

7 Hours

Memory Management: Memory allocation to programs, Memory allocation preliminaries, Contiguous and non-contiguous allocation to programs, Memory allocation for program controlled data, kernel memory allocation.

8 Hours**UNIT – III**

Virtual Memory: Virtual memory basics, Virtual memory using paging, Demand paging, Page replacement, Page replacement policies, Memory allocation to programs, Page sharing, UNIX virtual memory. Scheduling: Fundamentals of scheduling, Long-term scheduling, Medium and short term scheduling, Real time scheduling, Process scheduling in UNIX.

9 Hours**Course Outcomes:**

At the end of the course student will be able to

1. Summarize the overview of operating systems.
2. Describe the structure of operating systems.
3. Analyse the concept of process management, processes and threads.
4. Illustrate memory allocation and management in operating systems.
5. Analyse the concept of virtual memory and scheduling algorithms as implemented in UNIX.

OPERATIONS RESEARCH			
Course Code	20EEE253	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

Prerequisites: PTNM (21EE403),

Course Objectives:

- To understand the model and obtain solution to the Linear Programming Problems.
- To Solve the dual of LPP and compare the results of dual and primal. Also apply replacement theory for efficient operations.
- To Solve transportation and assignment problems and to solve game theory problems
- Build the network and crash it effectively and efficiently using PERT / CPM methods.

UNIT – I

Introduction: definition, OR models, characteristics and phases of OR.

2 Hours

Linear programming and Graphic Solution: Linear Programming: Formulation of Two variable LPP model, Graphical solution of two variables LPP, special cases in graphic solution: multiple optimal solution, infeasibility and unboundedness, simplex method: conditions and solutions to LPP using Simplex method, Big M method, Special cases in simplex method: multiple optimal, infeasibility, unboundedness, Degeneracy, sensitivity analysis.

7 Hours

Duality: Definition of the dual problem, primal to dual relationships, economic interpretation of duality.

3 Hours

Replacement Theory: Introduction, Replacement policy for equipment which deteriorates gradually, replacement of items that fail suddenly, staff replacement.

5 Hours

UNIT – II

Transportation Model: definition of transportation model, basic Feasible solution by NW Corner method, Least Cost method and MODI method, optimal solutions: stepping stone method, MODI method, the assignment model, traveling salesman problem.

8 Hours

GAME THEORY: Formulation of two - person, zero sum games, solving simple games, the Max-min min-max principles, graphical solution procedure, solving by linear programming.

8 Hours

UNIT – III

PERT & CPM TECHNIQUES: Network representation, critical path computation, construction of the time schedule, variation under probabilistic models, crashing of simple networks, PERT calculations.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Articulate a problem statement to determine solution to the Linear Programming Problems.
2. Apply replacement theory to find optimal replacement schedule.
3. Design and solve transportation problems to develop an optimal transportation solution
4. Formulate and solve game theory problems to propose the best solution
5. Design and Solve network problems using PERT / CPM methods to develop optimal strategy.

INTRODUCTION TO MACHINE LEARNING WITH PYTHON			
Course Code	21EEE254	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Pre-requisite:

Engineering Mathematics I, Engineering Mathematics II, 20EE301-Vector Calculus and Transform techniques, 20EE401-Probability and Numerical Methods, and 20EEE251-Fundamentals of Python Programming

Course Objectives:

- To analyse the given data set.
- To perform Linear and non-linear regression techniques using scikit learn package.
- To perform kNN and DT techniques using scikit learn package.
- To perform Logistic regression and SVM techniques using scikit learn package.
- To perform clustering and Design a recommender system

UNIT – I

Introduction: Introduction to Machine Learning, Python for Machine Learning, Supervised vs Unsupervised.

Regression: Introduction to Regression, Simple Linear Regression, Model Evaluation in Regression Models, Evaluation Metrics in Regression Models, Multiple Linear Regression, Gradient Descent Method, Non-Linear Regression.

15 Hours

UNIT - II

Classification: Introduction, K-Nearest Neighbours, Evaluation Metrics in classification, Introduction to Decision Trees, Building Decision Trees(DT), Introduction to Logistic Regression, Logistic regression vs Linear regression, Logistic Regression Training, Support Vector Machine(SVM). **15 Hours**

UNIT – III

Clustering: Introduction, Introduction to k-Means, Introduction to Hierarchical Clustering, DBSCAN
Recommender Systems: Introduction, Content-based Recommender Systems, Collaborative Filtering. **10 Hours**

Course Outcomes:

The students should be able to:

1. identify the characteristics of datasets and compare the trivial data for various applications
2. solve regression problems using linear/non-linear regression analysis techniques for various applications.
3. Perform classification using kNN, DT for various applications
4. solve classification problem using Logistic regression and SVM for various applications
5. Perform clustering analysis and design recommender system for various applications.

VII. ELECTRIC VEHICLES TECHNOLOGIES

HYBRID ELECTRIC VEHICLES			
Course Code	21EEE161	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To understand the fundamentals of electric and hybrid electric vehicles, EV policies, standards and EV architecture..
2. To understand control strategies and design principles of series hybrid vehicle drive train.
3. To know the design principles & control strategy of parallel and series-parallel hybrid drive train
4. To study the control principles of plug-in hybrid electric vehicles
5. To understand fundamentals of regenerative braking and CAN fundamentals

UNIT – I

Electric Vehicles: Configurations of electric vehicles (EVs), Performance of EVs, Tractive Effort in Normal Driving, Energy Consumption. EV Policies & Standards

Hybrid Electric Vehicles: Concept of Hybrid Electric Drive Trains, Architectures of Hybrid Electric Drive Trains, Series Hybrid Electric Drive Trains, Parallel Hybrid Electric Drive Trains

Design Principle of Series (Electrical Coupling) Hybrid Electric Drive Train: Operation Patterns, Control Strategies, Design Principles of a Series (Electrical Coupling) Hybrid Drive Train, Design Example
15 Hours

UNIT – II

Parallel (Mechanically Coupled) Hybrid Electric Drive Train Design: Drive Train Configuration and Design Objectives, Control Strategies, Parametric Design of a Drive Train

Design and Control Methodology of Series-Parallel (Torque and Speed Coupling) Hybrid Drive Train: Drive Train Configuration, Drive Train Control Methodology, Drive Train Parameters Design

Design and Control Principles of Plug-In Hybrid Electric Vehicles: Statistics of Daily Driving Distance, Energy Management Strategy, Energy Storage Design.
15 Hours

UNIT – III

Regenerative Braking: Fundamental of regenerative, Braking Energy Consumed in Urban Driving, Braking Energy versus Vehicle Speed, Braking Energy versus Braking Power, Braking Power versus Vehicle Speed, Braking Energy versus Vehicle Deceleration Rate, Braking Energy on Front and Rear Axles, Brake System of EV and HEV.
5 Hours

CAN Communication: CAN Fundamentals, CAN message frames, Typical Automotive Networks,

Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies.
5 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe the fundamentals of electric and hybrid electric vehicles to understand EV architecture.
2. Analyze control strategies to design of hybrid vehicle drive train.
3. Analyze control methodology and design of series-parallel hybrid drive train.
4. Describe the control principles of plug-in hybrid electric vehicles to predict the energy requirements.
5. Describe CAN communication and fundamentals of regenerative braking to compare the energy management strategies.

TEXTBOOK:

1. Modern Electric, Hybrid Electric, and Fuel Cell Vehicles, Mehrdad Ehsani, Yimin Gao, Ali Emadi, CRC Press, 2010.

HYBRID AND PLUG-IN HYBRID VEHICLES			
Course Code	21EEE162	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To study fundamentals of Hybrid Electric Vehicles (HEV)and EV powertrain component sizing.
2. To understand advanced HEV architectures and dynamics of HEV powertrain
3. To understand plug-in hybrid electric vehicles architecture, power management and component sizing.
4. To introduce special hybrid vehicles

UNIT – I

HEV Fundamentals - Introduction, Vehicle Model, Vehicle Performance, EV Powertrain Component Sizing, Series Hybrid Vehicle, Parallel Hybrid Vehicle, Wheel Slip Dynamics

Advanced HEV Architectures and Dynamics of HEV Powertrain - Principle of Planetary Gears, Toyota Prius and Ford Escape Hybrid Powertrain, GM Two-Mode Hybrid Transmission, Dual-Clutch Hybrid Transmissions, Hybrid Transmission Proposed by Zhang *et al.* Renault IVT Hybrid Transmission, Timken Two-Mode Hybrid Transmission, Tsai's Hybrid Transmission, Hybrid Transmission with Both Speed and Torque Coupling Mechanism, Toyota Highlander and Lexus Hybrid, E-Four-Wheel Drive, CAMRY Hybrid, Chevy Volt Powertrain, Dynamics of Planetary-Based Transmissions

15 Hours**UNIT – II**

Plug-in Hybrid Electric Vehicles -Introduction to PHEVs, PHEV Architectures, Equivalent Electric Range of Blended PHEVs, Fuel Economy of PHEVs, Power Management of PHEVs, PHEV Design and Component Sizing, Component Sizing of EREVs, Component Sizing of Blended PHEVs, HEV to PHEV Conversions, Other Topics on PHEVs, Vehicle-to-Grid Technology

15 Hours**UNIT – III**

Special Hybrid Vehicles - Hydraulic Hybrid Vehicles, Off-road HEVs, Diesel HEVs, Electric or Hybrid Ships, Aircraft, Locomotives, Other Industrial Utility Application Vehicles, HEV Applications for Military Vehicles

10 Hours**Course Outcomes:**

At the end of the course student will be able to

1. Describe the fundamentals of HEV and planetary gears to estimate EV powertrain component sizing
2. Analyze advanced HEV architectures and speed - torque coupling mechanism to understand hybrid transmissions of different manufacturers.
3. Describe the architecture of plug-in hybrid electric vehicles to understand power management.
4. Analyze the component sizing and concept of vehicle-grid technology.
5. Compare and contrast various special hybrid vehicles.

TEXTBOOK:

- Hybrid Electric Vehicles-Principles and Applications With Practical Perspectives, Chris Mi, M. Abul Masrur, Wiley, 2011

POWER ELECTRONICS & DRIVES FOR ELECTRIC VEHICLES			
Course Code	21EEE163	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

- To explain the principles of power electronics converters used in HEVs
- To understand the concept of battery chargers and thermal management of HEV power converters.
- To study various electric drives used in EVs and their control
- To analyze design and modeling of traction motors.
- To introduce vehicular power control strategy & energy management.

UNIT - I**Power Electronics in HEVs**

Introduction, Principle of Power Electronics, Rectifiers Used in HEVs, Buck Converter Used in HEVs, Non-isolated Bidirectional DC–DC Converter, Voltage Source Inverter, Current Source Inverter, Isolated Bidirectional DC–DC Converter, DC–DC Converters Applied in Hybrid Electric Vehicle Systems, PWM Rectifier in HEVs, EV and PHEV Battery Chargers, Emerging Power Electronics Devices, Circuit Packaging, Thermal Management of HEV Power Electronics

15 Hours**UNIT - II****Electric Drives and Control in HEVs**

Introduction, Induction Motor Drives and Control, Permanent Magnet Motor Drives, Switched Reluctance Motors, Doubly Salient Permanent Magnet Machines, BLDC Motor and Control, Design and Sizing of Traction Motors, Thermal Analysis and Modeling of Traction Motors

15 Hours**UNIT – III****Vehicular Power Control Strategy and Energy Management**

A Generic Framework, Definition, and Needs, Methodology to Implement, Benefits of Energy Management, Modeling and Simulation of HEV Power Electronics

10 Hours

Course Outcomes:

At the end of the course student will be able to

1. Analyze various power electronics converters used in HEVs.
2. Describe various converters for EV battery charging, emerging power electronics devices and thermal management.
3. Analyze the operation and control of various electric drives used in HEVs.
4. Select, design, model and perform thermal analysis of traction motors.
5. Analyze vehicular power control strategy to model & simulate HEV power converters.

TEXTBOOKS:

1. Hybrid Electric Vehicles-Principles and Applications with Practical Perspectives, Chris Mi, M. Abul Masrur, Wiley, 2011
2. Hybrid Electric Vehicle System Modeling and Control, Wei Liu, Second Edition, Wiley, 2017

AUTOMOTIVE ELECTRONICS			
Course Code	21EEE164	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	40	Credits	03

Course Learning Objectives:

This course will enable students to:

1. Understand various aspects of electronic system in vehicle control
2. Familiarized with various sensors used in vehicle control.
3. Comprehend the communication protocol used in vehicle.
4. Understand concepts of AUTOSAR.
5. Know the data processing and memory management system.

UNIT – I

Electrical and Electronic Systems in the Vehicle: Overview, Motoronic-engine management system, Electronic diesel control, Lighting technology, electronic stability program, adaptive cruise control,

Infotainment System.

Automotive Sensors & Measuring Principle: Air Flow Rate Sensor, Engine Crankshaft Angular Position Sensor, Magnetic Reluctance Position Sensor, Hall-Effect Position Sensor, Optical Crankshaft Position Sensor, Throttle Angle Sensor, Temperature Sensors, Exhaust Gas Oxygen Sensor, Knock Sensors, Automotive Engine Control Actuators.

15 Hours

UNIT – II

In Vehicle Networking: Need for In-vehicle Networking, Vehicle buses. Overview of CAN, LIN, Flex Ray, MOST protocols. Vehicular ad hoc networks (VANETs).

AUTOSAR Concepts: Architecture, Methodology and Application Interfaces. ECU SW Architecture, Virtual Function Bus, Abstraction Layer, BSW, RTE, ECU Communication.

15 Hours

UNIT – III

Architecture of Electronic Systems & Control Units: Basics and Overview, vehicle system architecture. Control units, Operating conditions, Design and data processing. Digital modules in the control unit. Automotive Applications.

10 Hours

TEXTBOOKS:

1. Robert Bosch GmbH, "Bosch Automotive Electrics and Automotive Electronics", 5th Edition. John Wiley & Sons Ltd, 2007
2. William B. Ribbens "Understanding Automotive Electronics", 6th Edition, Elsevier, 2003
3. Tom Denton, "Automobile Electrical and Electronic Systems", 3rd Edition, Elsevier Butterworth-Heinemann Publication, 2004.
4. KPIT Technologies Ltd. "KPIT-AUTOSAR Handbook", <https://www.kpit.com/resources/downloads/kpit-autosar-handbook.pdf>

REFERENCE BOOKS:

1. Nicolas Navet and Françoise Simonot-Lion, "Automotive Embedded Systems Handbook", CRC Press, 2009.

Course Outcomes:

At the end of the course student will be able to

1. Describe the function and operation of Automotive Electrical and Electronic subsystems.
2. Discuss the principle and operation of sensors and actuators used in automotive applications.
3. Analyse the use of CAN, LIN, MOST and Flexray protocols in automotive applications.
4. Explain the architecture & Methodology of AUTOSAR.
5. Describe automotive data processing and memory system

BATTERY STORAGE AND FUEL CELLS FOR ELECTRIC VEHICLES			
Course Code	20EEE261	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0:J	SEE Marks	50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To understand working of various energy storage devices
2. To introduce the concept of fuel cells
3. To analyze fuel cell hybrid electric drive train design
4. To compare various energy storage systems and modeling
5. To discuss battery charge control and management

UNIT – I

Peaking Power Sources and Energy Storages- Electrochemical Batteries, Ultracapacitors, Ultra-High-Speed Flywheels, Hybridization of Energy Storages.

10 Hours

UNIT - II

Fuel Cells - Operating Principles of Fuel Cells, Electrode Potential and Current–Voltage Curve, Fuel and Oxidant Consumption, Fuel Cell System Characteristics, Fuel Cell Technologies, Fuel Supply, Non-Hydrogen Fuel Cells

Fuel Cell Hybrid Electric Drive Train Design -Configuration, Control Strategy, Parametric Design, Motor Power Design, Power Design of the Fuel Cell System, Design of the Power and Energy Capacity of the PPS, Design Example

16 Hours

UNIT – III

Battery Characterization Comparison of Different Energy Storage Technologies for HEVs, Modeling Based on Equivalent Electric Circuits, Battery Charging Control, Charge Management of Storage Devices, Flywheel Energy Storage System, Hydraulic Energy Storage System, Fuel Cells and Hybrid Fuel Cell Energy Storage System modeling.

14 Hours

Course Outcomes:

At the end of the course student will be able to

1. Describe various energy storage technologies used in EVs
2. Analyze operating principle and characteristics of fuel cells to be used in EVs
3. Analyze and design various hybrid electric drive train configurations
4. Compare and model various energy storage devices used in HEV
5. Analyze battery charge control and charge management of storage devices.

ELECTRIC VEHICLE BATTERY CHARGING METHODS AND TOPOLOGIES			
Course Code	21EEE262	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J –The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To understand fundamentals and selection of storage devices for electric vehicles
2. To study the electric vehicle battery parameters and analyze effect on battery efficiency
3. To explain electric vehicle battery charging technologies
4. To understand electric vehicle battery discharging behavior.
5. To understand electric vehicle battery performance and thermal management.

UNIT – I

ELECTRIC VEHICLE BATTERIES: Electric Vehicle Operation, Battery Basics, Introduction to Electric Vehicle Batteries, Fuel Cell Technology, Choice of a Battery Type for Electric Vehicles

ELECTRIC VEHICLE BATTERY EFFICIENCY: Effects of VRLA Battery Formation on Electric Vehicle Performance, Regenerative Braking, Electric Vehicle Body and Frame, Fluids, Lubricants, and Coolants, Effects of Current Density on Battery Formation, Effects of Excessive Heat on Battery Cycle Life, Battery Storage, The Lithium-ion Battery, Traction Battery Pack Design

ELECTRIC VEHICLE BATTERY CAPACITY: Battery Capacity, The Temperature Dependence of Battery Capacity, State of Charge of a VRLA Battery, Capacity Discharge Testing of VRLA Batteries, Battery Capacity Recovery, Definition of NiMH Battery Capacity, Li-ion Battery Capacity, Battery Capacity Tests, Energy Balances for the Electric Vehicle

15 Hours

UNIT – II

ELECTRIC VEHICLE BATTERY CHARGING: Charging a Single VRLA Battery, Charge Completion of a Single VRLA Battery, Temperature Compensation During Battery Charging, Charging NiMH Batteries, Rate of Charge Effect on Charge Acceptance Efficiency of Traction, Battery Packs, Environmental Influences on Charging, Charging Methods for NiMH Batteries, Charging Technology, Battery Pack Corrective Actions

ELECTRIC VEHICLE BATTERY FAST CHARGING: On-board & off-board charging, The Fast Charging Process, Fast Charging Strategies, The Fast Charger Configuration, Using Equalizing/Leveling Chargers, Inductive Charging—Making Recharging Easier, Range Testing of Electric Vehicles Using Fast Charging, Electric Vehicle Speedometer Calibration. Wireless

Charging

ELECTRIC VEHICLE BATTERY DISCHARGING: Definition of VRLA Battery Capacity, Definition of NiMH Battery Capacity, Discharge Capacity Behavior, Discharge Characteristics of Li-ion Battery, Discharge of an Electric Vehicle Battery Pack, Cold-Weather Impact on Electric Vehicle Battery Discharge **15 Hours**

UNIT – III**ELECTRIC VEHICLE BATTERY PERFORMANCE:**

The Battery Performance Management System, BPMS Thermal Management System, The BPMS Charging Control, High-Voltage Cabling and Disconnects, Safety in Battery Design, Battery Pack Safety—Electrolyte Spillage and Electric Shock, Charging Technology, Electrical Insulation Breakdown Detection, Electrical Vehicle Component Tests, Building Standards, Ventilation

10 Hours**Course Outcomes:**

At the end of the course student will be able to

1. Explore concepts and selection of storage devices for electric vehicles.
2. Analyze the electric vehicle battery parameters and battery efficiency.
3. Explore electric vehicle battery charging technologies
4. Analyze electric vehicle battery discharging behavior.
5. Analyze electric vehicle battery performance and thermal management.

TEXTBOOK:

1. Electric vehicle battery systems by Sandeep Dhameja, Newnes Publishing, 2002

MODELING AND CONTROL OF HYBRID ELECTRIC VEHICLES			
Course Code	21EEE263	Course Type	PEC
Teaching Hours/Week (L:T:P)	3:0:0:J	CIE+SEE Marks	50+50
Total Hours	40	Credits	03

J -The course instructor can implement PBL (Project Based Learning) in this course.

Course Objectives:

1. To model hybrid electric vehicle system components
2. To model energy storage system
3. To study hybrid electric vehicle vibration, noise & control
4. To analyze the performance of HEVs

UNIT – I

Modeling of Hybrid Electric Vehicle - Modeling of an Internal Combustion Engine, Modeling of an Electric Motor, Modeling of the Battery System, Modeling of the Transmission System, Modeling of a Multi-mode Electrically Variable Transmission, Lever Analogy as a Tool for ECVT Kinematic Analysis, Modeling of the Vehicle Body, Modeling of the Final Drive and Wheel, PID-based Driver Model

15 Hours

UNIT – II

Modeling and Parameter Estimation of Energy Storage System - Electrical equivalent model of energy storage system, Methods of Determining the State of Charge, Estimation of Battery Power Availability, Battery Life Prediction, Cell Balancing, Estimation of Cell Core Temperature, Battery System Efficiency

8 Hours

Hybrid Electric Vehicle Vibration, Noise, and Control - Basics of Noise and Vibration, General Description of Noise, Vibration, and Control in Hybrid Electric Vehicles.

8 Hours

UNIT – III

Performance Analysis of Hybrid Electric Vehicle - Hybrid Electric Vehicle Simulation System, Typical Test Driving Cycles, Sizing Components and Vehicle Performance Analysis, Fuel Economy, Emissions, and Electric Mileage Calculation

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Analyze and model mechanical components of hybrid electric vehicle system.
2. Analyze and model electrical components of hybrid electric vehicle system.
3. Model and estimate parameter of energy storage system.
4. Analyze and control hybrid electric vehicle vibration & noise.
5. Analyze performance of HEV and HEV simulate system.

1. Hybrid Electric Vehicle System Modeling and Control, Wei Liu, Second Edition, Wiley, 2017

OPEN ELECTIVE (VI Semester) - 2023-2024

Sl. No.	Code	Name
1.	21MA8X02	Linear Algebra (for all except CS, IS, EC, CCE & AIML)
2.	21HU8X03	Intellectual property rights (for all)
3.	21CV8X07	Environment Impact Assessment (for all except Civil)
4.	21ME8X08	Industrial Pollution Control (for all except Mechanical)
5.	21HU8X24	Professional and Cognitive Communicative (for all)
6.	21ME8X28	Operations Management and Entrepreneurship (for all except Mechanical)
7.	21IS8X38	Introduction to Python Programming (for all except CS & IS)
8.	21BT8X40	Bio Fuel Engineering (for all except BT)
9.	21BT8X42	Solid Waste Management (for all except BT & Civil)
10.	21EC8X59	PCB Design (For all except E&C)
11.	21ME8X63	Innovation & Entrepreneurship (for all)
12.	21HU8X68	Introduction to Yoga (The classes will be conducted from 7.00 a.m. to 8.00 a.m. Those who are willing to come at 7.00 a.m. should only register)
13.	21HU8X70	Overview of Indian Culture and Arts (for all)
14.	21HU8X71	Principles to Physical Education (The classes will be conducted from 5.30 p.m. to 6.30 p.m. Those who are willing to come at 5.30 p.m. should only register)
15.	21HU8X72	Introduction to Japanese language (Students with no backlogs, CGPA should be above 7.0 & who opt to get placed in Japanese companies in Japan/India are eligible to register)
16.	21HU8X74	Introduction to German Language (for all)
17.	21ME8X75	Sustainable Development Goals (for all)
18.	21IS8X76	Web Technologies (for all except CS & IS)
19.	21CS8X77	Programming in Java (for all except EC,CS & IS)
20.	21CS8X78	Data Structures & Algorithms (for all except EC,CS & IS)
21.	21EE8X79	Electric Vehicle Technology (for all except EE)
22.	21HU8X81	National Cadet Corps: Organization, Functions & Capabilities (for only NCC Cadet Students)
23.	21EC8X82	Fundamentals of Image Processing – a practical approach (Only for CV, ME & BT)
24.	21HU8X86	Introduction to Yakshagana (for all - who are familiar with kannada Language)
25.	21ME8X88	Marketing Management (for all except Mechanical)

LINEAR ALGEBRA			
Course Code	21MA8X02	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives:

This course will enable the students to

1. Understand the concepts of vectors, bases.
2. Determine the kernel, range, rank, and nullity of a linear transformation and apply them suitably in their field of study.
3. Find the canonical forms and appraise its importance in various fields.
4. Make use of Gram-Schmidt process to produce an orthonormal basis.
5. Learn the concepts of singular value decomposition and PCA.

UNIT - I

Vector spaces

Vector spaces, subspaces, bases and dimensions, coordinate vectors, null spaces and column spaces of the matrices.

Linear Transformations

15 Hours

UNIT - II

Canonical Forms

Review of characteristic values, similarity of matrices, Cayley Hamilton theorem, annihilating polynomials, invariant subspaces, Jordan and rational canonical forms.

Inner Product Spaces

Inner products; inner product spaces, orthogonal sets and projections, Gram-Schmidt process, QR-factorization, Least-squares problems.

15 Hours

UNIT - III

Symmetric Matrices and Quadratic Forms:

Diagonalization, quadratic forms, constrained optimization, singular value decomposition and principal component analysis. Applications to linear recurrence relations.

09 Hours

Course Outcomes: At the end of the course student will be able to

1.	Interpret vectors in two and three-dimensional spaces both algebraically and geometrically.
2.	Analyze the concept of a linear transformation as a mapping from one vector space to another and be able to calculate its matrix representation with respect to standard and nonstandard bases.
3.	Understand the concepts of Jordan and rational canonical forms.
4.	Make use of Gram-Schmidt process to produce an orthonormal basis and also able to use least square approximation method to obtain the solution of ill conditioned system.
5.	Apply techniques of constrained optimization singular value decomposition and PCA for problems arising in various engineering fields.

CO1	3	2										
CO2	2	2										
CO3	3	1										
CO4	3	2										
CO5	3	2										

1: Low 2: Medium 3: High

Mode of Teaching and Learning:
Class room teaching.
Use of mathematical softwares (such as MATLAB, MATHEMATICA, SAGE, ETC.) as teaching aid.

Assessment Details (both CIE and SEE)
The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The student must obtain minimum of 40% marks individually both in CIE and SEE to pass. Theory Semester End Exam (SEE) is conducted for 100 marks (3 Hours duration). Based on this grading will be awarded.

Continuous Internal Evaluation:	
1.	Methods recommended: Two Tests (80%), Written Quiz (10%) and module assignments (10%).
2.	The class teacher must decide the topic for closed book test and Written Quiz. In the beginning only teacher must announce the methods of CIE for the subject.

Semester End Examination:	
	There will be 8 questions of 21 marks each in the question paper categorized into 3 Units as per the syllabi & contact hours. The student will have to answer 5 full questions, selecting 2 full questions each from Unit - I & Unit – II and 1 full question from Unit – III .

TEXTBOOKS:	
1.	Kenneth Hoffman and Ray Kunze, "Linear Algebra," 2nd edition, Pearson Education (Asia) Pte. Ltd, 2104.
2.	David C.Lay, “Linear Algebra and its Applications”, 3 rd edition, Pearson Education (Asia) Pte. Ltd, 2105.

INTELLECTUAL PROPERTY RIGHTS			
Course Code	21HU8X03	Course Type	OEC
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03
Total Teaching Hours	39+0+0	CIE + SEE Marks	50+50
Teaching Department: Humanities			
Course Learning Objectives:			
1.	Understand the creativity component in intellectual property, different types of legal protection of intellectual properties and other basic concepts of Intellectual property.		
2.	Analyze different types of protection for inventions, different types of agreements and treaties for Intellectual properties with an ability to examine patent types, specifications and patent search and database for 'prior art'.		
3.	Understand the basic procedure of drafting claims, apply for patents, other legal forms of intellectual property rights and also to examine the protocol involved in protection of inventions like patents.		

UNIT - I

Introduction to Intellectual Property
Invention and Creativity - Intellectual Property (IP) – Importance, Jurisprudential definition and concept of property, rights, duties and their correlation; History and evaluation of IPR – like Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge, Geographical Indications.

8

<p>Agreements and Treaties</p> <p>History - General Agreement on Trade and Tariff (GATT). Indian Position vis-a-vis WTO and Strategies; TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities – Budapest Treaty; PCT; Indian Patent Act 1970 & recent amendments – Patent (Amendment) Rules, 2017</p>

8

UNIT - II		

Basics of Patents and Concept of Prior Art Introduction to Patents; Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; Specifications: Provisional and complete; Forms and fees Invention in the context of “prior art”; Patent databases; Searching International Databases; Country-wise patent searches (USPTO, EPO, WIPO, IPO, etc.)

8

<p>Patent filing procedures</p> <p>National & PCT filing procedure; Time frame and cost; Status of the patent applications filed; Structure of Patent document, Precautions while patenting – disclosure/non-disclosure; Financial assistance for patenting - introduction to existing schemes; Patent licensing and agreement; Patent infringement- meaning, scope, litigation, case studies</p>
--

8

UNIT - III	
-------------------	--

Case Studies:
 Patents: Biological Cases - i) Basmati rice ii) Turmeric iii) Neem; Non-biological cases – (i) TVS V/S Hero, (ii) Samsung V/S Nokia – Copyright and related rights – Trade Marks – Trade secrets - Industrial design and Integrated circuits – Geographic indications – Protection against unfair competition; Technology transfer and license agreements (US anti-HIV drug license to Africa)

7

Course Outcomes: At the end of the course student will be able to

1.	Have a General understanding of the Intellectual Property Rights.
2.	Have awareness of different forms of intellectual property rights, national and international IPR related legislations.
3.	Have a general understanding about the provisions, privileges and limitations of intellectual property right holders with an understanding of the legal aspects (civil or criminal) of the use of intellectual property rights.
4.	Acquire Knowledge of National and International Trade Agreements and Agencies functioning in relation to intellectual property rights
5.	Be aware and have a general understanding of patenting procedures and licensing.

ENVIRONMENTAL IMPACT ASSESSMENT			
Course Code	21CV8X07	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives:

This Course will enable students to

1. Identify the need to assess and evaluate the impact of projects on environment.
2. Explain major principles of environmental impact assessment.
3. Understand the different steps within environmental impact assessment.
4. Appreciate the importance of EIA for sustainable development and a healthy environment.

UNIT – I

Evolution of EIA: Concepts of EIA, EIA methodologies (Adhoc, Network Analysis, Checklists, Map overlays, Matrix method), Screening and scoping, Rapid EIA and Comprehensive EIA, General Framework for Environmental Impact Assessment, EIA Specialized areas like environmental health impact assessment, Environmental risk analysis.

16 Hours

UNIT - II

Baseline data study, Prediction, and assessment of impacts on physical, biological, and socio-economic environment, Legislative and environmental clearance procedures in India, Public participation, Resettlement, and rehabilitation.

10 Hours

UNIT – III

Fault free analysis, Consequence Analysis, Introduction to Environmental Management Systems, Environmental management plan-Post project monitoring Environmental Audit: Cost Benefit Analysis, Life cycle Assessment. Case studies on project, regional and sectoral EIA.

13 Hours

Course Outcomes:

At the end of the course the student will be able to

1. Understand phenomena of impacts and know the impact quantification of various projects in the environment.
2. Liaise with and list the importance of stakeholders in the EIA process.
3. Know the role of public in EIA studies.
4. Overview and assess risks posing threats to the environment.
5. Assess different case studies/examples of EIA in practice.

INDUSTRIAL POLLUTION CONTROL			
Course Code	21ME8X08	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives: This Course will enable students to,	
1	Know the Consequences of pollution, relationship between man and environment over the last few decades, necessity of modern awareness on pollution and how carbon audit can help in developing a carbon strategy.
2	Identify the Importance of Meteorology in pollution control and global warming, various types of plume dispersions and its effect; analyze various levels of plume height for different pollutants.
3	Distinguish Particulates and fly ash separation techniques such as cyclone separator, electrostatic precipitator efficiency calculations etc.
4	Illustrate Formation, measurement and control techniques for Smoke and gaseous pollutants.
5	Summarize the Effects of water, soil, plastics and odor pollution their control techniques, Different Pollution Control Acts, Legal aspects of pollution control and how these acts can help in bringing down the pollution rate.
UNIT - I	
Introduction to Pollution	
Man and the environment, types of pollution and its consequences, Changing environmental management concept, sustainable industrial growth, carbon audit, Ill effects of various pollutants, permissible concentration levels & AQI.	
Meteorology	
Meteorology, Wind rose, Lapse rate, plume dispersion studies & Numerical problems	
15 Hours	

UNIT - II	
Separation techniques	Different types of Particulates, Need for Separation techniques, Sources of Particulates Matter Fly Ash Electrostatic precipitator (Problems) Theory of settling processes (Design Problems), Bag House fabric filter Cyclone separator Spray Tower Scrubbers & Venturi Scrubber
Smoke and gaseous pollutants	Smoke- White, blue and black smoke, Sources of smoke, T,T,T-O Principle of smoke Measurement of stack smoke intensity using Ringlemann Chart and Smokescope & Bosch Smoke meter, Domestic and Industrial Incinerators-Design factors, Pollutant gaseous So ₂ , Co, UBHC, Nox their ill effects and & control methods..
15 Hours	
UNIT - III	
Water, soil, noise, and odor pollution, their control methods, problems associated with nuclear reactors, Legal aspects of pollution control in India, brief details of Euro and BS standards.	
9 Hours	

Course Outcomes:

At the end of the course the student will be able to

CO 1	Identify the various types of pollutants and distinguish between them with regards to Particulate matters and AQI.
CO 2	Outline the instruments for Meteorological measurements, distinguish types of plume dispersions and its effect; analyze the concentration of various gaseous pollutants from T-Z diagrams.
CO 3	Explain the Particulates and fly ash separation techniques, compare and Interpret their efficiency.
CO 4	Illustrate Formation, measurement and control techniques for Smoke and gaseous pollutants
CO 5	Identify Effects of water, soil, plastics and odor pollution on environmental Pollution and explain the Legal aspects of pollution control.

Scheme of SEE Question Paper

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabi & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I** & **Unit – II** and **1** full question from **Unit – III**.

PROFESSIONAL & COGNITIVE COMMUNIQUÉ			
Course Code	21HU8X24	Course Type	OE
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03
Total Teaching Hours	39+0+0	CIE + SEE Marks	50+50
Teaching Department: Humanities			
Course Learning Objectives:			
1.	To Problematize Commonsense & Apply Critical thinking skills		
2.	Comprehend etiquettes and manners in different situations		
3.	Be gender sensitive in both offline and online behavior		
4.	Exhibit better comprehension of the social implications of human body		
5.	Understand the importance of reading and writing skills		
UNIT - I			
Common sense and Emotional Intelligence Common sense, Commonsensical Consensus, Critical thinking, Unsettling commonsensical Consensus, Role of language in Common sense and Critical Thinking; Nature & Functions of Emotional Intelligence, Emotions, Intelligence and Creativity, Growth of Emotional Intelligence			15
Etiquettes & Workplace Etiquette, Workplace Etiquettes, Workplace Readiness Skills, Significance of Cross-Cultural Understanding; Cultural Sensitivity, Impact of social media in Workplace			
UNIT - II			
Social Networking Sites and its Impacts Emergence of social media, Impact on Gender and Self Representation, Regulatory and Liberatory aspects of social media, Offline Norms & Online Behaviour			15
Gender and Body Gender & Sex, Genderization, Homogeneity and Heterosexuality, Gender Expressions, Gender Schooling, Representations of Body, Objectification, Gender Perspectives of Body, Different Ways of Seeing the Body, Discipline & Coercion, ISA & RSA			
UNIT - III			
Writing Types of Writing, Note Taking Methods, Plagiarism Reading Styles of Reading, Types of Reading, Scanning, Skimming			9

Course Outcomes: At the end of the course student will be able to															
1.	Problematize Commonsense & Apply Critical thinking skills														
2.	Comprehend etiquettes and manners in different situations														
3.	Be gender sensitive in both offline and online behavior														
4.	Exhibit better comprehension of the social implications of human body

OPERATIONS MANAGEMENT & ENTREPRENEURSHIP				
Course code		21ME8X28	CIE Marks	50
Teaching Hours/Week (L:T:P)		(3:0:0)	SEE Marks	50
Total Hours		39	Credits	03
Course Learning Objectives: This Course will enable students to,				
1	Define production/operations management, Classify Production and service system and different type of production systems, Understand the importance of CRM and ERP			
2	Appreciate the importance of Quality tools and methods in operations management			
3	Analyze the data draw variable process control charts and determine process capability; Understand salient issues concerning reliability			
4	Understand the issues related to entrepreneurship, characteristics of an entrepreneur and different studies carried out during project appraisal.			
5	Identify and differentiate the different national and state level funding agencies.			
UNIT – I				
Introduction to Production/ Operations Management: Concept of production, Classification of production systems, Production Management, Concept of operations, Distinction between Manufacturing Operations and Service Operations, Objectives of Operations Management (Customer Service and Resource utilization/ Competitive advantage through Quality-Delivery-Cost), Scope of Operations Management. Introduction to				

Customer Relationship Management (CRM) and Enterprise Resource Planning (ERP).	
7 Hours	
Introduction to Quality Concepts: The Meaning of Quality and Quality Improvement, Key dimensions of Quality, Concept of cost of quality. Customers' perception of quality.	
TOTAL Quality Management: Definition, Principles of TQM, Gurus of TQM, Benefits of TQM.	
Managing Quality: Quality circles, Continuous Improvement- Juran's Trilogy, PDSA cycle, Kaizen, 7 QC tools,	
Philosophy of statistical process control and modeling process quality: Normal distribution tables, Finding the Z score, Central limit theorem, Chance and assignable causes of variation, Statistical Basis of the Control Charts (basic principles, choices of control limits, significance of control limits, warning limits)	
9 Hours	
UNIT – II	
Control charts for variables: Control Charts for X-Bar and R- Charts, Type I and Type II errors, Simple Numerical Problems,	
Process capability: The foundation of process capability, Natural Tolerance limits, c_p – process capability index, c_{pk} , p_p – process performance index, summary of process measures. Numerical problems. Concept of Six sigma.	
Introduction to reliability, Mean time to failure, Mean time between failures, Bath tub curve, Reliability of series and parallel systems, Numerical problems on the above topics.	
8 Hours	
Entrepreneurship: Concept of Entrepreneurship, Stages in entrepreneurial process, Role of entrepreneurs in Economic Development, Barriers to Entrepreneurship, Meaning of Entrepreneur, Functions of an Entrepreneur, Types of Entrepreneurs, Intrapreneur - an emerging Class.	
Identification of business opportunities: Market Feasibility Study; Technical Feasibility Study; Financial Feasibility Study & Social Feasibility Study.	
Application of Operations Management concepts in Facility/ Business Location: General procedure for making locations decisions, Numerical Problems on application of Breakeven analysis and Transportation method to make location decisions.	
8 Hours	
UNIT – III	
Small scale industries: Definition; Characteristics; Need and rationale; Objectives; Scope; role of SSI in Economic Development. Advantages of SSI, Steps to start and SSI, Government policy towards SSI; Different Policies of SSI, Impact of Liberalization, Privatization, Globalization on SSI. Effect of WTO/GATT on SSI, Supporting Agencies of Government for SSI, Ancillary Industry and Tiny Industry (Definition Only)	
Institutional Support: Different Schemes; TECKSOK; KIADB; KSSIDC; KSIMC; DIC Single Window Agency; SISI; NSIC; SIDBI; KSFC.	
7 Hours	

Course Outcomes (CO)

CO 1	Differentiate production and service systems. Discuss continuous and intermittent production systems with their advantages and disadvantages. Discuss CRM and ERP systems.
CO 2	Discuss Total Quality Management tools and methods. Solve problems on fundamentals of statistics and normal distribution.
CO 3	Draw and Analyze variable process control charts and determine process capability. Calculate reliability of series and parallel systems using the information on failure rate and time.
CO 4	Discuss entrepreneurship, characteristics of an entrepreneur and barriers to entrepreneurship. Discuss the elements of a project report and feasibility studies conducted in the project appraisal.
CO 5	Identify and differentiate the national and state level funding agencies. Discuss the effect of GATT and WTO on Indian economy.

Scheme of SEE Question Paper

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabi & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I** & **Unit – II** and **1** full question from **Unit – III**.

INTRODUCTION TO PYTHON PROGRAMMING			
Course Code	21IS8X38	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Prerequisites:

Student must have fundamental knowledge of procedure-oriented programming.

Course Learning Objectives (CLOs):

At the end of the course student should be able to:

- Construct Python programs using data types and looping.
- Design object-oriented Python programs using classes and objects.
- Design useful stand-alone and CGI applications in Python.

UNIT - I

INTRODUCTION: Introduction to python, Installing Python; basic syntax, interactive shell, editing, saving, and running a script. The concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program; understanding error messages. Conditions, Boolean logic, logical operators; ranges; Control statements: if-else, loops (for, while); short-circuit (lazy) evaluation.

STRING MANIPULATIONS: subscript operator, indexing, slicing a string; strings and number system: converting strings to numbers and vice versa, Binary, octal, hexadecimal numbers

LISTS, TUPLES, AND DICTIONARIES: Basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.

15 Hours

UNIT – II

FUNCTIONS: Design with functions: hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Program structure and design. Recursive functions

CLASSES AND OOP: Classes, objects, attributes and methods; defining classes; design with classes, data modelling; persistent storage of objects, inheritance, polymorphism, operator overloading (`_eq_`, `_str_`, etc); abstract classes; exception handling, try block

15 Hours

UNIT – III

FILE HANDLING: Manipulating files and directories, Reading from Text Files, Writing to Text Files, Reading from Binary Files, Writing to Binary Files, Seeking Within Files, Creating and Reading a formatted file (csv or tab-separated).

GRAPHICAL USER INTERFACES: event-driven programming paradigm; creating simple GUI; buttons, labels, entry fields, dialogs; widget attributes - sizes, fonts, colors layouts, nested frames Simple CGI form

9 Hours

Course Outcomes:

Sl. No.	Course Outcome (CO)	Bloom's Taxonomy Level (BTL)
C8X38.1	Demonstrate the basics of Python programming like data types and looping	L2
C8X38.2	Apply the basic data structures in solving the problems	L3
C8X38.3	Experiment with usage of functions in a given problem	L3
C8X38.4	Develop Objects by creating classes and apply object-oriented features	L3
C8X38.5	Develop applications in Python using File Programming & User Interface	L3

Table: Mapping of COs to PIs, POs and BTL

Course Outcomes (COs)	Program Outcomes (POs) Addressed	Performance Indicators (PI)	Bloom's Taxonomy Level (BTL)
CO1	1,2,3	1.4.1,1.3.1,2.1.1,2.1.2,2.2.4,3.1.1	L2
CO2	1,2,3	1.4.1,1.3.1,2.3.1,3.1.1,3.2.2	L3
CO3	1,2,3	1.4.1,1.3.1,2.1.1,2.1.2,2.2.4,3.1.1,3.1.6,3.2.1,3.2.2	L3

TEXTBOOK:

- 1) Kenneth A. Lambert, The Fundamentals of Python: First Programs, 2111, Cengage Learning, ISBN: 978-1111822705

ADDITIONAL RESOURCES:

1. Think Python. PDF is free.

SEE Question Paper Pattern:

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabi & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I & Unit - II** and **1** full question from **Unit - III**.

BIOFUEL ENGINEERING			
Course Code	21BT8X40	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Prerequisites: Nil

Co-requisites: Nil

Course Learning Objectives:

The objective of this course is

- To learn the fundamental concepts of biofuels, types of biofuels, their production technologies.
- To learn the concepts of feedstock utilization and energy conversion technologies.

UNIT – I**LIQUID BIOFUELS**

Description and classification of Biofuels; Primary biomass: Plant materials-Woody biomass, Lignocellulosic and agroindustrial by-products, starchy and sugary crops. Secondary biomass: Waste residues and co-products-wood residues, animal waste, municipal solid waste. Biomass production for fuel – algal cultures, yeasts (Lipid and carbohydrate).

Production of biodiesel: Sources of Oils – edible and non edible; Esterification and Transesterification. Free fatty acids; saponification; Single step and two step biodiesel production. Catalysts for biodiesel production – homogeneous (alkali/acidic) and heterogeneous; Lipase mediated process. General procedure of biodiesel production and purification Quality Control Aspects: GC analysis of biodiesel, fuel property measurements, ASTM (D-6751) and Indian standards (IS15607). Algal Biodiesel production.

Production of Bioethanol: Bioethanol production using Sugar; Starch and Lignocellulosic feedstocks; Pretreatment of lignocellulosic feed stock

15 Hours

UNIT – II**BIOHYDROGEN AND MICROBIAL FUEL CELLS**

Enzymes involved in H₂ Production; Photobiological H₂ Production: Biophotolysis and Photofermentation; H₂ Production by Fermentation: Biochemical Pathway, Batch Fermentation, Factors affecting H₂ production, Carbon sources, Detection and Quantification of H₂. Reactors for biohydrogen production.

Microbial Fuel cells: Biochemical Basis; Fuel Cell Design: Anode & Cathode Compartment, Microbial Cultures, Redox Mediators, Exchange Membrane, Power Density; MFC Performance Methods: Substrate & Biomass Measurements, Basic Power Calculations, MFC Performance: Power Density, Single vs Two-Chamber Designs, Wastewater Treatment Effectiveness; Advances in MFC.

15 Hours

UNIT – III**RECOVERY OF BIOLOGICAL CONVERSION PRODUCTS**

Biogasification of municipal solid waste: Anaerobic processing; Types of digesters, Biogas plant in India.

Thermochemical processing: Planning an incineration facility, Incineration technologies: Mass burning system; Refuse derived fuel (RDF) system; modular incineration; Fluidized bed incineration; energy recovery; Fuel production through biomass incineration, Pyrolysis and gasification, hydrothermal processing.

9 Hours

Course Outcomes:

At the end of this course, student should be able to:

1. Mark the significance of biofuels and raw materials and Identify suitable feedstock for production of biofuels.
2. Illustrate the production of liquid biofuels from various feed stocks.
3. Demonstrate production of biohydrogen using microbial sources.
4. Extend the concepts of microbial fuel cells towards development of specific application.
5. Understand and apply the concepts of biochemical processing to harvest energy from waste products/streams.

SOLID WASTE MANAGEMENT			
Course Code	21BT8X42	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Prerequisites: Nil

Co-requisites: Nil

Course Learning Objectives:

The objective of this course is

1. To learn types of solid wastes, collection, treatment and disposal methods.
2. To understand various processing techniques and regulations of treatment and disposal.

UNIT – I

INTRODUCTION TO SOLID WASTES AND ITS SEGREGATION & TRANSPORTATION

Solid waste – Definition, Sources of waste, Classification of Solid waste, Characteristics of Solid Waste (Physical, Chemical, Biological), Solid waste problems – impact on environment and health. Concept of waste reduction, recycling and reuse.

Waste collection and segregation: Solid waste generation, Onsite handling and segregation of wastes at source, Collection and storage of municipal solid wastes, Equipment used and manpower required in collection, Collection systems and routes.

Transportation: Transfer stations: types, location, maintenance, Methods and means of transportation.

15 Hours

UNIT – II

PROCESSING TECHNIQUES, RECOVERY OF RESOURCES AND WASTE DISPOSAL

Processing Techniques: Unit operations for separations and processing, mechanical and thermal volume reduction, Incineration of solid wastes – process and types of incinerators (liquid injection, rotary kiln and fluid bed), Biological processing – composting, vermicomposting, biomethanation, fermentation, Drying and dewatering of wastes.

Recovery of Resources: Heat recovery in incineration process, energy recovery and conversion of products from biological processes.

Dumping of solid wastes, Landfills – Types, site selection, preliminary design, operation, case study, Advantages and disadvantages of landfills, Leachate and landfill gases: Collection and treatment, Landfill disposal for hazardous wastes, biomedical waste.

16 Hours

UNIT – III

SOLID WASTE MANAGEMENT RULES AND PLANNING ISSUES

Legislative trends and impacts: Major legislations, Government agencies. Municipal Solid Waste Management Act (1999), Hazardous Wastes (Handling and Management) Rules, Biomedical Waste (Handling and Management) Rule (1998), e-Waste (Management and Handling) Rule 2011.

Planning and developing a site for solid waste management, Site Remediation: Assessment and Inspection, Remedial techniques, Siting guidelines.

8 Hours

Course Outcomes:

At the end of this course, the student will be able to

1. Identify the sources, classification and characteristics of solid wastes
2. Develop insight into the collection, transfer, and transport of solid waste.
3. Apply waste processing techniques and recovery of resources from the waste.
4. Select the alternatives of solid waste disposals and its impacts.
5. Acquire knowledge about solid and hazardous waste management legislative rules.

PCB DESIGN			
Course Code	21EC8X59	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Pre-requisites:

Basic electrical and electronics engineering.

Course Learning Objectives:

1. To enable students to gain knowledge of Schematic Design techniques & PCB design techniques
2. To expose students to complete PCB Design & manufacturing process

List of Experiments

- Introduction to PCB design tool: building a schematic circuit and layout
- Exploring the PCB design tool by creating new components, using existing components and footprint, simulation features, Active & Passive Components
- Drawing a PCB layout in a single layer with constraints such as board area, track width, packages, via etc
- Creating a double layer PCB for a given schematic circuit
- Creating and using different component package types
- Fabrication of single and double layer PCB on a copper clad board using hatching/engraving technique.
- Handling PCB prototype machine using Mach3 CNC tool for the PCB prototype.

Detailed Course Plan**Lab 1**

Introduction to PCB design tool : building a schematic circuit.

Lab 2

Creating Library & Components, using existing components and footprint, simulation features, Active & Passive Components.

Lab 3

Designing a single layer PCB for given schematic circuit diagram, Gerber file generation.

Lab 4

Designing a double layer PCB for given schematic circuit diagram, Gerber file generation.

Lab 5

Simulating digital and analog circuits for given test cases.

Lab 6

Handling programmable microcontroller circuit in the simulation environment of schematic editor .

Lab 7

Defining a footprint for a component in the PCB layout.

Lab 8

Fabrication of single layer PCB using PCB prototype machine – Generating bit file in Copper Cam tool.

Lab 9

Fabrication of single layer PCB using PCB prototype machine – Setting up Mach3 CNC tool.

Lab 10

Fabrication of double layer PCB using PCB prototype machine – Generating bit file in Copper Cam tool.

Lab 11

Fabrication of double layer PCB using PCB prototype machine -Setting up Mach3 CNC tool.

Lab 12

Component placement and soldering.

Lab 13

Desoldering and testing.

Scheme of SEE Examination

It is a 3-Hour exam at the end of the semester where the student is to demonstrate the PCB designing process.

Sl.No	Activity	Max. Marks
1	Creating schematic for a given circuit diagram	15
2	PCB Layout design	21
3	Setting up fabrication	15
Total		50

Course Outcomes:

At the end of the course the student will be able to

1. Draw schematic circuit and create PCB layout for single or multilayer PCB
2. Fabricate single and double-layer PCB using Mach3Mill operated CNC machine.

INNOVATION AND ENTREPRENEURSHIP			
Course Code	21ME8X63	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Prerequisites:

The student must have learnt basics of Engineering concepts, applications and business as a whole.

Course Learning Objectives: This Course will enable students to,

1	Understand Technological Innovation
2	Understand Innovation management and the difference between Invention and Innovation.
3	Appreciate the importance of Innovation as management process and Innovation management techniques.
4	Define Innovation system and Understand the importance of Technology management and Transfer.
5	Identify Technological Entrepreneurship and its types and Understand the Institutional support provided for Entrepreneurs

UNIT – I**INTRODUCTION TO TECHNOLOGICAL INNOVATION****14 Hours**

Basic Concepts and Definitions: Technology - Technology Management – Invention – Creativity – Innovation - The Concept of Technological Innovation - Innovation Posture, Propensity and Performance - Innovation Measurement - Key factors linking creativity and innovation – Classifications of Innovations – Innovation Process.

INTRODUCTION TO INNOVATION MANAGEMENT

Innovation Management Through Management of Knowledge and Education – Types of Learning - Difference Between Innovation and Invention - Types and Characteristics of Innovation.

INNOVATION AND COMPETITIVENESS

Case Study – Barriers for Innovation and Competitiveness.

UNIT – II	
INNOVATION AS A MANAGEMENT PROCESS	14 Hours
Activities to enhance companies capacity for innovation – Management of Technological Innovation: Corporate Perspective, National Perspective, Theoretical Perspective and Individual Perspective - Challenges in Technological Innovation Management - Case Study in Technological Innovation Management - Innovation Management Techniques (IMTs).	
INNOVATION SYSTEMS	
The Concept of Innovation Systems - Innovation Systems: Sectoral, Regional, National.	
TECHNOLOGY MANAGEMENT AND TRANSFER	
Technology Transfer - Impacts of MNCs in technology transfer -	
UNIT – III	
INTRODUCTION TO TECHNOLOGICAL ENTREPRENEURSHIP	11 Hours
Types of Entrepreneurship: Mixed Entrepreneurship, Pure Entrepreneurship, Social Entrepreneurship, Collaborative Entrepreneurship, Internal Entrepreneurship, External Entrepreneurship - Sustainable Entrepreneurship -	
INSTITUTIONAL SUPPORT	
Business Incubator (Bi) - Determination of the Five Incubator Services - Incubation Centres in India – Atal Incubation Centre – Startup India - NSIC, KIADB, KSFC.	

Course Outcomes (CO):	
At the end of the course the student will be able to,	
CO 1	Describe technological innovation and its key features for business.
CO 2	Describe innovation management and difference between invention and innovation.
CO 3	Explain innovation as a management process, its management and perspectives. Understand Innovation management techniques.
CO 4	Explain innovation system, technology management and transfer.
CO 5	Explain technological entrepreneurship and institutional support.
TEXTBOOK:

Scheme of SEE Question Paper

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabi & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I & Unit – II** and **1** full question from **Unit – III**.

INTRODUCTION TO YOGA				
Course Code:	21HU8X68	Course Type	OEC	
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03	
Total Teaching Hours	39	CIE + SEE Marks	50+50	

Course Learning Objectives:

1.	To give a brief history of the development of Yoga
2.	Identify names of different classical texts on Yoga
3.	To illustrate how Yoga is important for healthy living
4.	To explain the Asanas and other Yogic practices
5.	To explain, how Yoga practices can be applied for overall improvement

UNIT – I

OVERVIEW OF INDIAN CULTURE AND ART				
Course Code		21HU8X70	Course Type	OE
Teaching Hours/Week (L:T:P: S)		3:0:0:0	Credits	03
Total Teaching Hours		39+0+0	CIE + SEE Marks	50+50
Teaching Department: Humanities				
Course Learning Objectives:				
1.	To understand the relevance of Culture in Human Life, dynamism of Indian Culture and Arts through ages.			
2.	To understand the local culture and its vibrancies.			
3.	To develop awareness about Indian Society, Culture and Arts under Western rule.			
4.	To comprehend different dimension and aspects of the Indian culture and arts.			
5.	To appreciate cultural performances in India.			
UNIT - I				
Knowing Culture What is Culture, Different aspects of Culture, Cultural expression, Importance of Culture				7
Influence of Culture Relationship of Culture with: Language, Religion and History, Gender				7
UNIT - II				
Media and Culture Role of News Papers, Indian Cinema, Music, Advertisements				7
Languages, Literature and Culture Role of Sanskrit, Vedas, Upanishads, Ramayana and Mahabharata, Puranas, other Sanskrit Literature, Buddhist and Jain Literature, Dravidian Languages and Literature, North Indian Languages and Literature, Subaltern Literature				7

UNIT - III																																																																																																																							
Arts and Culture Indian Theatre and Performing Arts, Ritual performances, and Tuluva cultural and ritual performances.													7																																																																																																										
(Self-study Component) Contribution of Indian History to Culture Ancient India – Persian and Macedonian invasions and its impact on Indian Culture, Development of Culture and Arts during the Mauryan Empire (Ashoka), the Guptas, the South Indian Dynasties – the Cholas, Nalanda as a Centre of Learning. Medieval India – Life of People under Delhi Sultanate, Rise of Islam and Sufism, Political Scene of India, Bhakti Movement, Folk Arts, Rise of Modern Indian Languages. Modern India – British Ruling and its impact on Indian Culture, Social and Religious Reforms, Indian National Movement and Achievement of Independence.													4																																																																																																										
Course Outcomes: At the end of the course student will be able to																																																																																																																							
1.	Examine how the culture has a very important role in human life and growth of human civilization and have a general awareness on historical perspective of growth of Indian Culture and Arts.																																																																																																																						
2.	Appreciate their own local culture from an academic perspective.																																																																																																																						
3.	Know about the impact of Western Rule in India and Indian Struggle for Freedom and also its impact on Indian Culture and Arts and able to appreciate and the role of language in connecting people, growth of culture and arts beyond the barriers of religion and ages.																																																																																																																						
4.	Take interest in learning these forms of arts, and also appreciate and preserve them for the future generations feeling proud of Indian Culture, Arts and Architecture.																																																																																																																						
5.	Appreciate art performances in India which will enable them to get exposed to an artistic sphere, which eventually help them to be creative and imaginative.

PRINCIPLES TO PHYSICAL EDUCATION			
Course Code	21HU8X71	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives:

This Course will enable students to

1. Appreciate and understand the value of physical education and its relationship to a healthy active lifestyle.
2. Work to their optimal level of physical fitness.
3. Show knowledge and understanding in a variety of physical activities and evaluate their own and others' performances.

UNIT - I

History of Physical Education - Olympic games, Modern Olympic games, Olympic Ideals & Objectives, Olympic Symbols, Olympic Flag, Olympic Emblem, Olympic Motto, Olympic Flame, Asian games

International Olympic Committee (IOC), Indian Olympic Association (IOA)

Sports awards - Eligibility, Objectives & Criteria

Yoga - Meaning and Importance

World Health organization (WHO)

10 Hours

UNIT – II

Concept of Health - Meaning of Health, Health Definition, Factors Affecting Health, Qualities of Healthy Person. Health Hazards of College Students, Physical Fitness and Exercises.

Food and Nutrition - Food & Nutrition Defined, Nutrients and their Functions - i) Proteins ii) Carbohydrates iii) Fats iv) Vitamins

Balanced Diet & Malnutrition

Health Education - Meaning of Health Education, Health Education Defined, Scope of Health Education, Importance of Health Education.

Posture - Concept of Posture, Correct Postures, Common Postural Defects

First Aid - First Aid Defined, Need and importance of First Aid, The Requisites of First Aid, Scope of First Aid, Qualities of a First Aider, Fundamental Principles to be followed and the Duties to be performed by the First Aider, First Aid in Different Cases.

Physical Education - Concept of Physical Education, Physical Education Defined, Importance of Physical Education, Scope of Physical Education, Aims and Objectives of Physical Education.

Teaching Aid in Physical Education

Competition - Introduction, Types of competition, Knock out, League or Round Robin Tournament.

12 Hours

UNIT – III

Training in Sports – Meaning, Principles, Warming Up & Limbering Down

Importance of Anatomy and Physiology in Physical Education, Oxygen Debt and Second wind

Leadership and Supervision – Leadership, Qualities of a good leader in Physical Education, Types of Leadership in Physical Education - 1. Teacher Leadership 2. Student Leadership.

Measurement & specification of various playing fields – Cricket, Volley Ball, Basket Ball, Badminton, Ball Badminton, Foot Ball, Hand Ball & their basic playing skills.

16 Hours

Course Outcomes:

At the end of the course, the student will be able to

1. Demonstrate an understanding of the principles and concepts related to a variety of physical activities.
2. Apply health and fitness principles effectively through a variety of physical activities.
3. Support and encourage others (towards a positive working environment).
4. Show self-motivation, organization and responsible behavior.

INTRODUCTION TO JAPANESE LANGUAGE																
Course Code					21HU8X72			Course Type					OEC			
Teaching Hours/Week (L:T:P: S)					3:0:0:0			Credits					03			
Total Teaching Hours					39+0+0			CIE + SEE Marks					50+50			
Teaching Department:																
Course Objectives:																
1.		Have basic spoken communication skills														
2.		Write Simple Sentences														
3.		Listen and comprehend basic Japanese spoken Japanese														
4.		Read and understand basic Japanese characters including Kanji														
UNIT - I																
(Lessons 1-6)															13	
Grammar – Introduction, Alphabets, Accents, Noun, Pronoun, Present Tense, Past tense																
Vocabulary – Numbers, Days, week days, months, Seasons, Nature, Dialogs and Video Clips																
UNIT - II																
(Lessons 7-13)															13	
Communication skills – Time, Adjective, Seasons, Conversation, Q&A																
Hobby, 5-W/1-H, Entering School/Company, Body Parts, Colours, Features etc.																
UNIT - III																
(Lessons 14-21)															13	
Japanese Counting System, Birth/Death, Dialogs (Going to Party, Restaurant), My day, Success/Failure, Kanji																
Characters, and sentence making, Video Clips																
Course Outcomes: At the end of the course student will be able to																
1.		Understand Simple words, expressions and sentences, spoken slowly and distinctly														
2.		Speak slowly and distinctly to comprehend														
3.		Read and Understand common words and sentences														
4.		Ask Basic questions and speak in simple sentences														
5.		Write Hiragana/Katakana and Kanji (121) characters.

INTRODUCTION TO GERMAN LANGUAGE			
Course Code	21HU8X74	Course Type	OEK
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03
Total Teaching Hours	39+0+0	CIE + SEE Marks	50+50
Teaching Department: Mechanical			
Course Objectives:			
1.	Distinguish - definite and indefinite articles, declension of singular and plural nouns by adding certain endings to them to differentiate between subjects, objects and indirect objects and construct sentences of simple day to day usage.		
2.	Differentiate between nomnative and akkusative cases with transitive and intransitive verbs, and negation with Kein/e/er		
3.	Differentiate use of dative object besides the subject for some specific verbs and Apply the grammar principles of use of personal pronoun as a substitute for noun as per the case, number and gender of the noun.		
4.	Differentiate preposition forms when used exclusively in akkusative or Dative forms or on combination of the two cases		
5.	Differentiate conjugation of verbs in present, present-perfect and past participle tenses, separable and inseparable verbs, application of conjugation of modal verbs and position of modal verb in a sentence.		
UNIT - I			
Introduction: Mein Name ist (saying who you are, greeting people and saying goodbye, asking people where they come from and where they live. Language point: I and you), Lesen der politischenKarte der Welt, Nationalitaeten und Spachen, Die Uhrzeit (The time) telling time and talking about daily routine, Tage der Woche, die Monate, die vierJahreszeiten, die Jahre Mir gehes gut: Asking people how they are, saying how you are, saying which cities and counries people come from, Language points: verb endings), Wieschreibt man das (how do you write that?) Counting from 1-100 and above, alphabet, spelling our names and words, talking about us and them. Language points: Yes-no questions Artikel (Articles): As in English, there are definite (der/die/das) and indefinite (ein/eine) articles: the □ der/die/das; a/an □ ein/eine Die vierFälle (The four cases): Nominativ, Akkusativ, Dativ, Genitiv(Not in level A-1) Deklination des bestimmtenArtikels der/die/das Deklination des unbestimmtenArtikelsein/eine (Deklination/Declension: the variation of the form of a noun, pronoun, or adjective, by which its grammatical case, number, and gender are identified) Deklination von Substantiven (Declension of nouns) (Singular and Plural) (German nouns are declined by attaching certain endings to them, according to case, number and gender. This helps to differentiate between subjects, objects and indirect objects). Nominativ und Akkusativ(nominative and accusative cases) The verb determines the case of the noun. Some verbs only go with the nominative, others only with the accusative (or the dative). Thus, German verbs are either transitive or intransitive. (Nominative and accusative cases) Intransitive Verben (intransitive verbs) Transitive Verben (transitive verbs) Negation „kein/e/er “(negation with „kein/e/er “) (Singular und Plural) The negation of the indefinite article (ein/eine/ein) is kein/keine/kein. For this, you just have to put a „k“ at the beginning of the declined form of ein/eine/ein. Peter siehteinHaus. □ Negation □ Peter siehtkeinHaus. (Peter sees a house. □ negation □ Peter does not see a house.) (With examples, writing and hearing exercises, and German to English Glossary as applicable)			13
UNIT - II			
Dativ (the dative) (You are already familiar with verbs which require a direct accusative object in addition to the subject, which is in the nominative case. But there also some verbs which require a dative object besides the subject. To identify the dative object you ask “(To) whom?”) Der Plural (the plural)			13

<p>There are many different forms of the plural in the German language. Principally, the gender and the ending of the noun determine the plural form. Then, you either attach a plural ending to the noun, change a vowel, or keep the noun as it is in the singular.</p> <p>Das Personalpronomen (the personal pronoun) The personal pronoun is a substitute for a noun. Its forms are determined by the case, number and gender of the noun which is to be replaced.</p> <p>Die Formen des PersonalpronomenimNominativ (The nominative forms of the personal pronoun):</p> <p>Präpositionen (prepositions) German prepositions are followed by an object, either in the accusative or the dative case. Some prepositions always take an accusative object, others always a dative object. But there are also prepositions which can be followed by both. In this case, the question “Where(to)?” (□ accusative) or “Where?” (□ dative) determines the case of the object.</p> <p>PräpositionenmitAkkusativ und Dativ (Prepositions with accusative and dative)</p> <ol style="list-style-type: none"> 1. PräpositionenmitAkkusativ (prepositions with accusative) 2. PräpositionenmitDativ (prepositions with dative) 3. PräpositionenmitAkkusativoderDativ (prepositions with accusative or dative) <p>(With examples, writing and hearing exercises, and German to English Glossary as applicable)</p>	
UNIT - III	
<p>Konjugation von VerbenimPräsens (Conjugation of verbs in present tense) Verbs are conjugated by attaching certain endings, depending on the person and number of the subject.</p> <p>Trennbare und untrennbareVerben (separable and inseparable verbs) Verbs with prefixes are distinguished between separable and inseparable verbs. The prefix of an inseparable verb must never be separated from the stem. Here the stress is on the stem: be- kommen. The prefix of a separable verb gets separated from the stem when the verb is conjugated. In the infinitive, the stress is on the prefix: an-kommen</p> <ol style="list-style-type: none"> 1. TrennbareVerben (separable verbs) 2. UntrennbareVerben (inseparable verbs) <p>Konjugation von VerbenimPerfekt (Conjugation of verbs in present perfect) The present perfect (Perfekt) describes something which happened in the past and is especially used in spoken German. It is formed with the present tense form of „haben“ or „sein“ and the past participle of the main verb.</p> <ol style="list-style-type: none"> 1. Die Bildung des Partizips (the formation of the past participle) 2. Die Bildung des Perfektsmit „haben“ und „sein“ (the formation of the present perfect with „haben“ and „sein“) <p>Modalverben (modal verbs) A modal verb is rarely used as a main verb; instead, it usually modifies the main verb. While the main verb remains in the infinitive, the modal verb is conjugated. In German, there are 7 modal verbs: können (can/be able), dürfen (may/be allowed), wollen (want), müssen (must/have to), sollen (shall), mögen (to like), möchten (wish/would like)</p> <ol style="list-style-type: none"> 1. Konjugation der Modalverben (Conjugation of the modal verbs) 2. Stellung des ModalverbsimSatz (Position of the modal verb within a sentence) <p>(With examples, writing and hearing exercises, and German to English Glossary as applicable)</p>	13

Course Outcomes: At the end of the course student will be able to																
1.	Distinguish - definite and indefinite articles, declension of singular and plural nouns by adding certain endings to them to differentiate between subjects, objects and indirect objects and construct sentences of simple day to day usage.															
2.	Differentiate between nomnative and akkusative cases with transitive and intransitive verbs, and negation with Kein/e/er															
3.	Differentiate use of dative object besides the subject for some specific verbs and Apply the grammar principles of use of personal pronoun as a substitute for noun as per the case, number and gender of the noun.															
4.	Differentiate preposition forms when used exclusively in akkusative or Dative forms or on combination of the two cases															
5.	Differentiate conjugation of verbs in present, present-perfect and past participle tenses, separable and inseparable verbs, application of conjugation of modal verbs and position of modal verb in a sentence.

SUSTAINABLE DEVELOPMENT GOALS			
Course code	21ME8X75	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03
Course Learning Objectives: Sustainable Development Goals is a 2116 United Nations officially released Agendas for Sustainable approach environmental integrity, economic viability and a just society for present and future generations. It aims to provide the knowledge, skills, attitudes and values necessary to address sustainable development challenges. They address the global challenges we face, including poverty, inequality, climate change, environmental degradation, peace and justice. Learn more and take action. This SDG program is organized in such a way to be research-led, applied interdisciplinary program that considers sustainability in both developed and developing societies, and addresses critical global challenges put forth by UN.			
UNIT – I			
The origin, development and idea of the SDGs History and origins of the Sustainable Development Goals. What are the SDGs? What are their aims, methodology and perspectives? How are they related to the Millennium Development Goals? SDGs and Society: Ensuring resilience and primary needs in society In-depth discussion and analysis of goals related to poverty, hunger, health & well-being and education			
			13 Hours
UNIT – II			
SDGs and Society: Strengthening Institutions for Sustainability In-depth discussion and analysis of goals related to gender equality, affordable and clean energy, sustainable cities & communities, and peace, justice & strong institutions SDGs and the Economy: Shaping a Sustainable Economy In-depth discussion and analysis of goals related to work & economic growth, industry, innovation & infrastructure, inequalities, responsible production & consumption			
			13 Hours
UNIT – III			
SDGs and the Biosphere: Development within Planetary Boundaries In-depth discussion and analysis of goals related to clean water, climate, life below water and life on land Realizing the SDGs: Implementation through Global Partnerships In-depth discussion and analysis of SDG 17 which aims to implement the SDGs through partnerships, finance, technology and the development of coherence between policies.			
			13 Hours

Course Outcomes:

At the end of the course the student will be able to

CO 1	Summarize the UN's Sustainable Development Goals and how their aims, methodology and perspectives.
CO 2	Analyze the major issues affecting sustainable development and how sustainable development can be achieved in practice.
CO 3	Identify and apply methods for assessing the achievement/possibilities of sustainable development in Nitte gram panchayath.
CO 4	Evaluate the implications of overuse of resources, population growth and economic growth and sustainability & Explore the challenges the society faces in making transition to renewable resource use
CO 5	Create skills that will enable students to understand attitudes on individuals, society and their role regarding causes and solutions in the field of sustainable development.

TEXTBOOKS:

1. Sachs, Jeffrey D. The age of sustainable development. Columbia University Press, 2115
2. Gagnon, B., Leduc, R., and Savard, L., Sustainable development in engineering: a review of principles and definition of a conceptual framework. Cahier de recherche / Working Paper 08-18, 2108.
3. Dalby, Simon, et al. Achieving the Sustainable Development Goals: Global Governance Challenges. Routledge, 2119.
4. Sustainability: A Comprehensive Foundation by Tom Thesis and JonathanTomkin, Editors.

Scheme of SEE Question Paper

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabi & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I & Unit – II** and **1** full question from **Unit – III**.

WEB TECHNOLOGIES			
Course Code	21IS8X76	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives (CLOs):

At the end of the course student should be able to:

- Illustrate the Semantic Structure of HTML and CSS
- Compose forms and tables using HTML and CSS
- Design Client-Side programs using JavaScript and Server-Side programs using PHP
- Illustrate the Database connectivity using PHP
- Examine JavaScript frameworks such as jQuery

UNIT - I

Introduction to HTML- Html tags and simple HTML forms, web site structure, HTML table, Need for CSS, introduction to CSS, basic syntax and structure, using CSS, background images, colours and properties, manipulating texts, using fonts, borders and boxes, margins, padding lists, positioning using CSS, Selectors, The Cascade: How Styles Interact, The Box Model, CSS Text Styling.

15 Hours

UNIT - II

Client side Scripting: Introduction to JavaScript: JavaScript language – declaring variables, scope of variables functions, event handlers (on click, on submit etc.), Document Object Model, Form validations. Introduction to PHP: Declaring variables, data types, arrays, strings, operations, expressions, control structures, functions, Reading data from web form controls like Text Boxes, radio buttons, lists etc.,

15 Hours

UNIT – III

PHP Databases: Basic command with PHP examples, Connection to server, creating database, selecting a database, listing database, listing table names creating a table, inserting data, altering tables, queries, deleting database, deleting data and tables, File Handling in PHP, PHP Arrays and Superglobals, Arrays, \$_GET and \$_POST Superglobal Arrays, jQuery Introduction: What is jQuery, Adding jQuery in to your web pages, jQuery Syntax, jQuery Selectors, jQuery Events.

9 Hours

Course Outcomes:

Sl. No.	Course Outcome (CO)	Bloom's Taxonomy Level (BTL)
C8X52.1	Adapt HTML and CSS syntax and semantics to build web pages	L2
C8X52.2	Construct and visually format tables and forms using HTML and CSS	L3
C8X52.3	Experiment with the usage of Event handling and Form validation using Java script	L3
C8X52.4	Understand the principles of object oriented development using PHP and Database concepts	L2
C8X52.5	Inspect JavaScript frameworks like jQuery which facilitates developer to focus on core features.	L2

Table: Mapping of COs to PIs, POs and BTL

Course Outcomes (COs)	Program Outcomes (POs) Addressed	Performance Indicators (PI)	Bloom's Taxonomy Level (BTL)
CO1	1,3	1.3.1,1.4.1,3.2.1,	L2
CO2	1,2,3	1.4.1,3.2.1,3.2.2,2.1.1,2.2.4,3.1.6	L3
CO3	1,3	1.4.1,3.2.1,3.2.2,3.4.3	L3
CO4	1,2,3	1.4.1,3.2.1,3.2.2,2.1.1,2.2.4,3.1.6	L2
CO5	1,3	1.4.1,3.2.1,3.2.2	L2

Mapping Course Outcomes with Programme Outcomes:

E RESOURCES:

- nptel.ac.in/courses/106105084/11

SEE Question Paper Pattern:

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabus & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I & Unit – II** and **1** full question from **Unit – III**.

PROGRAMMING IN JAVA			
Course Code	21CS8X77	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives:

This course will enable students to:

1. Learn fundamental features of object oriented language and JAVA programming constructs.
2. Develop and run simple Java programs using OOPS concepts of java
3. Create multi-threaded programs and event driven Graphical User Interface (GUI) programming using swing package.

UNIT – I

Introduction to Java: Java's magic: The Byte code; Java Development Kit (JDK); the Java Buzzwords, Object-oriented programming; Simple Java programs. Data types, variables and arrays, Operators, Control Statements.

Classes, Inheritance: Classes fundamentals; Declaring objects; Call by value and Call by Reference, array of objects, Constructors, this keyword, and usage of static keyword.

Inheritance: inheritance basics, using super, creating multi-level hierarchy, method Overriding, abstract classes, final classes.

15 Hours

UNIT – II

Exception handling, packages and interfaces: Exception handling in Java, use of try, catch blocks, multiple catch blocks, finally block, use of throw and throws clauses, creating custom exceptions. Packages, Access Protection, Importing Packages, Interfaces. IO Streams for file handling.

Multi-Threaded Programming:

What are threads? How to make the classes threadable; Extending threads; Implementing runnable interface; creating multiple threads, join and is Alive methods of Thread class, Thread Synchronization; achieving thread synchronization among multiple threads. Thread priorities, methods to get and set thread priority

15 Hours

UNIT – III

Event Handling: Two event handling mechanisms; The delegation event model; Event classes; Sources of events; Event listener interfaces; Using the delegation event model;

Swings:

The origins of Swing; Two key Swing features; Components and Containers; The Swing Packages; A simple Swing Application; Create a Swing Applet; JLabel and ImageIcon; JTextField; The Swing Buttons; JTabbedPane; JScrollPane; JList; JComboBox; JTable.

09 Hours

Course Outcomes:

Upon completion of this course, students will be able to:

1. Apply the object-oriented concepts to solve real world problems using JAVA programming features
2. Illustrate the basic constructs and object oriented features of the Java language
3. Design a multi-threaded program using Java with exception handling
4. Develop Java programs that includes packages and interfaces and perform file operations in Java
5. Develop simple GUI interfaces for a computer program to interact with users, and to understand the event-based GUI handling principles using swings

Table-2: Mapping Levels of COs to POs / PSOs															
COs	Program Outcomes (POs)												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	2	3			2				1	1		1	2	3	
CO2	1	2	2		1				1	1		1		3	
CO3	1	2	3		1				1	1		1		3	2
CO4	1	2	3		1				1	1		1	2	3	3
CO5	1	2	3		1				1	1		1		3	3

Graduate Attributes (GA)

This course will map the following GA as per NBA:

1. Design/Development of Solutions
2. Problem Analysis
3. Modern tool usage

TEXTBOOK:

SEE SCHEME:

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabi & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I & Unit – II** and **1** full question from **Unit – III**.

DATA STRUCTURES AND ALGORITHMS			
Course Code	21CS8X78	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives:

This course will enable students to:

1. **Outline** the concepts of data structures, its types, structures and pointers.
2. **Understand** linear data structures, namely, stack, queue, singly linked list and doubly linked list.
3. **Analyze** nonlinear data structures, namely, binary tree and graphs.
4. **Analyze** the non-recursive and recursive algorithms and to represent Efficiency of these algorithms in terms of the standard Asymptotic notations.
5. **Explain** the various algorithm design techniques and apply them to solve various real world problems.

UNIT – I

INTRODUCTION:

Data Structure, Classification (Primitive and non-primitive), data structure operations.

POINTERS:

Definition and Concepts, Accessing variables through pointers, Arrays and pointers. Structures, pointers to structures.

LINEAR DATA STRUCTURES – STACKS:

Introduction and Definition, Representation of stack: Array and structure representation of stacks, Operations on stacks using C functions (Push(), Pop(), IsStackFull(), IsStackEmpty()).

LINEAR DATA STRUCTURES – QUEUES:

Introduction and Definition Representation of Queue: Array and Structure representation of queue, Operations on Ordinary Queue using C functions (Insert(), Remove(), IsQueueFull(), IsQueueEmpty())

15 Hours

UNIT – II

LINEAR DATA STRUCTURES - SINGLY LINKED LISTS:

Dynamic Memory allocation functions. Definition and concepts singly linked List: Representation of link list in memory, Operations on singly Linked List using C functions (Insert node at front, Remove a node from front, display singly linked list).

LINEAR DATA STRUCTURES - DOUBLY LINKED LISTS:

Doubly Linked List: Representation. (Operations not included).

NONLINEAR DATA STRUCTURES – BINARY TREES:

Binary Trees: Properties, Linked representation of Binary Tree, Binary Tree Traversals, Introduction to Binary Search Tree.

INTRODUCTION TO ALGORITHMS:

What is an Algorithm? Fundamentals of Algorithmic Problem Solving, understanding and representing graphs using adjacency matrix and linked list.

FUNDAMENTALS OF THE ALGORITHMS EFFICIENCY:

Analysis Framework, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non-recursive and Recursive Algorithms.

15 Hours

UNIT – III

DECREASE & CONQUER:

Concept of Decrease and Conquer, Graph traversal algorithms - Depth First Search, Breadth First Search.

DYNAMIC PROGRAMMING:

Concept of Dynamic Programming, Computing a Binomial Coefficient.

GREEDY METHOD:

Concept of Greedy technique, Prim's algorithm.

BACKTRACKING:

Concept of Backtracking technique, N-Queens problem.

9 Hours

Course Outcomes:

1. **Acquire** the fundamental knowledge of various types of data structures and pointers using that knowledge, analyze and design the programs using pointers
2. **Apply** the fundamental programming knowledge of data structures to analyze and design linear data structures, namely, stack, queue, singly linked list and doubly linked list and use them for solving problems.
3. **Implement** and apply the concept of binary trees and graph data structures and also understand their traversals.
4. **Analyze** non-recursive or recursive algorithm and to represent in terms of standard Asymptotic notations.
5. **Apply** Divide and Conquer, Decrease and Conquer, Dynamic programming, Greedy, and Backtracking algorithm design techniques to solve real time problems.

Table-2: Mapping Levels of COs to POs / PSOs															
COs	Program Outcomes (POs)												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	2						1				1	3		
CO2	3	1	2					1				1	3		
CO3	3	2						1				1	3		
CO4	2	3												2

4. <http://nptel.ac.in/courses/106101060/>

SEE SCHEME:

There will be **8** questions of **21** marks each in the question paper divided into **3 Units** as per the syllabi & contact hours and the student will have to answer **5** full questions, selecting **2** full questions from **Unit - I & Unit – II** and **1** full question from **Unit –III**

ELECTRIC VEHICLE TECHNOLOGY			
Course Code	21EE8X79	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Eligible Students: For all engineering stream except E&E Engineering

Course Learning Objectives:

1. To Understand the fundamental laws and vehicle mechanics.
2. To Understand working of Electric Vehicles and recent trends.
3. Ability to analyze different power converter topology used for electric vehicle application.
4. Ability to develop the electric propulsion unit and its control for application of electric vehicles.

UNIT – I

Vehicle Mechanics: Roadway Fundamentals, Laws of Motion, Vehicle Kinetics, Dynamics of Vehicle Motion, Propulsion Power, Force-Velocity Characteristics, Maximum Gradability, Velocity and Acceleration, Constant FTR, Level Road, Velocity Profile, Distance Traversed, Tractive Power, Energy Required, Nonconstant FTR, General Acceleration, Propulsion System Design.

Electric and Hybrid Electric Vehicles: Configuration of Electric Vehicles, Performance of Electric Vehicles, Traction motor characteristics, Tractive effort and Transmission requirement, Vehicle performance, Tractive effort in normal driving, Energy consumption Concept of Hybrid Electric Drive Trains, Architecture of Hybrid Electric Drive Trains, Series Hybrid Electric Drive Trains, Parallel hybrid electric drive trains. **14 Hours**

UNIT – II

Energy storage for EV and HEV: Energy storage requirements, Battery parameters, Types of Batteries, Modelling of Battery, Fuel Cell basic principle and operation, Types of Fuel Cells, PEMFC and its operation, Modelling of PEMFC, Super capacitors.

Electric Propulsion:

EV consideration, DC motor drives and speed control, Induction motor drives, Permanent Magnet Motor Drives, Switch Reluctance Motor Drive for Electric Vehicles, Configuration and control of Drives. **16 Hours**

UNIT – III

Design of Electric and Hybrid Electric Vehicles: Series Hybrid Electric Drive Train Design: Operating patterns, control strategies, Sizing of major components, power rating of traction motor, power rating of engine/generator, design of PPS Parallel Hybrid Electric Drive Train Design: Control strategies of parallel hybrid drive train, design of engine power capacity, design of electric motor drive capacity, transmission design, energy storage design.

9 Hours

Course Outcomes:

At the end of the course student will be able to

1. Explain the roadway fundamentals, laws of motion, vehicle mechanics and propulsion system design.
2. Explain the working of electric vehicles and hybrid electric vehicles in recent trends.
3. Model batteries, Fuel cells, PEMFC and super capacitors.
4. Analyze DC and AC drive topologies used for electric vehicle application.
5. Develop the electric propulsion unit and its control for application of electric vehicles.

Course Outcomes Mapping with Program Outcomes & PSO

1: Low 2: Medium 3: High

SEE QUESTION PAPER PATTERN:

- There will be **8** questions of **21** marks each in the question paper categorized into **3 Units** as per the syllabi & contact hours. The student will have to answer **5** full questions, selecting **2** full questions each from **Unit – I & Unit – II** and **1** full question from **Unit – III**.

TEXTBOOKS:

- Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Husain, CRC Press, 2103
- Modern Electric, Hybrid Electric, and Fuel Cell Vehicles: Fundamentals, Theory, and Design, M. Ehsani, Y. Gao, S.Gay and Ali Emadi, CRC Press, 2105

REFERENCE BOOKS:

- Energy Management Strategies for Electric and Plug-in Hybrid Electric Vehicles, Sheldon S. Williamson, Springer, 2113.
- Modern Electric Vehicle Technology, C.C. Chan and K.T. Chau, OXFORD University, 2101
- Hybrid Electric Vehicles Principles And Applications With Practical Perspectives, Chris Mi, M. Abul Masrur, David Wenzhong Gao, Wiley Publication, 2101

E-Books / MOOC:

- Introduction to Mechanics | Coursera
- NPTEL: Electrical Engineering - Introduction to Hybrid and Electric Vehicles
- Electric Vehicles - Part 1 - Course (nptel.ac.in)
- Hybrid Vehicles (edX) | MOOC List (mooc-list.com)
- NPTEL: Electrical Engineering - Introduction to Hybrid and Electric Vehicles
- Electric Cars: Technology | My MOOC (my-mooc.com)

NATIONAL CADET CORPS: ORGANIZATION, FUNCTIONS AND CAPABILITIES			
Course Code	21HU8X81	Course Type	OEC
Teaching Hours/Week (L:T:P:S)	3:0:0:0	Credits	03
Total Teaching Hours	39+0+0	CIE + SEE Marks	50+50
Teaching Department: Chemistry			
Course Learning Objectives:			
1.	To create evolved youth, who will be equipped to contribute in the development of the nation.		
2.	To train students so as to achieve their physical and mental endurance. To acquire body language of a smart soldier and to inculcate the sense of authority by commanding the troop under him/her.		
3.	To inculcate spirit of adventure, undertake adventure activities, to hone leadership qualities and risk-taking abilities.		
4.	To understand and develop life skills, soft skills and to improve the emotional quotient of the student.		
5.	To impart basic military training, to develop awareness about the defense forces and expose learners to military ethos / values		
UNIT – I			
NCC: Aims, Objectives and Organization NCC General, Aims, Objectives and Organization of NCC. Duties of NCC Cadets, NCC Camps: Types and Conduct. National Integration: Importance and Necessity, Unity in Diversity.			7
Personality Development Self-Awareness, Empathy, Critical and Creative Thinking, Decision Making and Problem Solving. Communication Skills, Coping with stress and emotions. Leadership: Traits, Indicators, motivation, moral values, Honor Code. Social Service and Community Development.			7
UNIT – II			
Naval Communication and Seamanship Naval Communication: Introduction, Semaphore, Navigation: Navigation of Ships- Basic requirements, Chart work. Seamanship: Introduction to Anchor work, Rigging Capsule, Boat work- Parts of Boat, Boat pulling instructions, Whaler sailing instructions. Ship Modeling.			8
Disaster management and environmental awareness Disaster Management- Organization, Types of Disasters, Essential Services, Assistance, Civil Defence organization. Adventure Activities. Dos and Don'ts, Fire services and Firefighting, Environmental Awareness and Conservation.			8
UNIT – III			
Naval Orientation Naval Orientation- Armed Forces and Navy Capsule, EEZ Maritime Security & ICG. Border & Coastal Areas: Security setup and Boarder/Coastal management in the area. Naval Orientation: Modes of Entry- IN, ICG, Merchant Navy. Border and Coastal areas: Security Challenges & role of cadets in Border management			9

Course Outcomes: At the end of the course student will be able to

1.	Display sense of patriotism, secular values and shall be transformed into motivated youth who will contribute towards nation building through national unity and social cohesion.
2.	Demonstrate the sense of discipline, improve bearing, smartness, turnout and develop the quality of immediate and implicit obedience of orders, with good reflexes.
3.	Acquaint, expose & provide knowledge about Army/Navy/ Air force and acquire information about expanse of Armed Forces, service subjects and important battles.

FUNDAMENTALS OF IMAGE PROCESSING – A PRACTICAL APPROACH			
Course Code	21EC8X82	CIE Marks	50
Teaching Hours/Week (L:T:P)	2:0:1	SEE Marks	50
Total Hours	26:0:26	Credits	03

Course Learning Objectives:

This course will enable the students to

1. Understand basic operations on images.
2. Understand the concepts of colour models.
3. Explain image enhancement techniques.
4. Perform morphological operations on images.
5. Perform thresholding operation for image segmentation.

Software Tool Required: MATLAB

Image Fundamentals: Description of Image and Basic operations: Image Brightening, Darkening, Addition, Subtraction, Multiplication and logic operations, Binary and Gray scale images, Color Fundamentals.

Image Enhancement Techniques: Concept & Importance of Histogram, Basic gray level transformations, Histogram processing, Basics of spatial filtering, smoothing spatial filters, sharpening filters.

Morphological Operations and Thresholding: Introduction, Erosion and Dilation, Opening and Closing, Thresholding, segmentation methods.

26 Hours

List of Experiments:

1. Introduction to MATLAB.
2. Reading and analyzing images.
3. Image Conversions.
4. Basic operations on images.
5. Basic Arithmetic operations on images- Addition, Subtraction and Multiplication.

6. Exploring Image manipulation operations.
7. Histogram processing.
8. Demonstration of Effects of Filters on images-Smoothing.
9. Demonstration of Effects of Filters on images-Sharpening.
10. Exploring different color models.
11. Demonstration of Morphological Operations.
12. Demonstration of thresholding operations.
13. Exploring image segmentation methods.

Scheme of SEE

Laboratory based evaluation

Course Outcomes:

At the end of the course the student will be able to

1. Demonstrate the understanding of basic operations on images
2. Apply image enhancement methods
3. Perform segmentation operation

Mapping of PO's/ PSO's & CO's:

INTRODUCTION TO YAKSHAGANA			
Course Code	21HU8X86	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning objectives:

The course will enable the students to:

1. Gain basic understanding of Thenku Thittu Yakshagana.
2. Perform basic movements.
3. Understand speech/dialogue, rhythm, Entry and improvisation skills.

UNIT – I

Introduction: Meaning and features, Origin and development, Difference between Thenkuthittu and Badaguthittu yakshagana. A brief introduction to Thenkuthittu Yakshagana. Thalasa-Aadi thala, yeka thala, Kore thala and Asta Thala with biditha and mukthya- Practice. Dhingina – Practice.....

14 Hours

UNIT – II

Thalasa- Rupaka Thala, Trivide Thala, Jampe thala etc. with biditha and mukthaya. Dhigina – Practice Rangasthala Pravesha steps and Eripada ettugade steps. Revision of all Thalasa.

14 Hours

UNIT – III

Yakshagana Prasanga Practice- Abhinaya and presentation.....

11 Hours

Performance: The final part of the course is the performance. A Prasanga will be chosen and taught to the participants and they will perform the same in front of a live audience.

REFERENCE BOOKS:

1. Arthayana: Yakshagana Talamaddale Arthagarike: Ondu Vishleshane: Dr.Ramananda Banari.
2. Yaksha Naatyanjali Thenkuthittu- Sampadaka: Sathish Madivala, Karkala.
3. Yakshagna Shikshana Patya Pustka- Prathamika vibhaga (Karnataka Patya pusthaka sangha- Bengaluru)
4. Koralara: YakshaganaVimarsha Sankalana: Dr.M. Prabhakara Joshi
5. Vaagartha Gawrava: (Dr. Joshi Abhinandana Guchaha): Ga. Na. Bhat

MARKETING MANAGEMENT			
Course Code	21ME8X88	CIE Marks	50
Teaching Hours/Week (L:T:P)	3:0:0	SEE Marks	50
Total Hours	39	Credits	03

Course Learning Objectives:

This Course will enable students to

1. Understand and learn the marketing concepts and their application to profit-oriented and non-profit oriented organizations.
2. Able to apply the marketing concepts to analyze the buying behavior & marketing segments to solve these problems.
3. Understand and learn the need for a customer orientation in product pricing & marketing research in the competitive global business environment;
4. Able to develop an understanding and acquiring skills in how to successfully design and implement marketing plans and strategies.
5. Understand and learn the concept of sales, advertising & distribution of marketing mix and its application in traditional and novel environments characterized by emerging information technologies.

UNIT - I

BASICS

Definition, Marketing Process, Dynamics, Needs, Wants & Demands, Marketing Concepts, Environment, mix, types, philosophies, Selling Vs. Marketing, organization, Industrial Vs. Consumer Marketing, Consumer goods, Industrial goods, Product hierarchy.

8 Hours

BUYING BEHAVIOUR & MARKET SEGMENTATION

Cultural, Demographic factors, Motives, types, Buying decisions, segmentation factors, Demographic, Psychographic & Geographic Segmentation, Process, Patterns.

8 Hours

UNIT - II

PRODUCT PRICING & MARKETING RESEARCH

Objectives, pricing, Decisions and Pricing methods, Pricing Management. Introduction, Uses, process of Marketing Research.

8 Hours

MARKETING PLANNING & STRATEGY FORMULATION

Components of a marketing plan, strategy formulations and the marketing process, implementation, Portfolio analysis, BCG, GEC grids.

8 Hours

UNIT - III

ADVERTISING, SALES PROMOTION & DISTRIBUTION

Characteristics, Impact, goals, types, Sales promotion-Point of Purchase, Unique Selling proposition.

Characteristics, Wholesaling, Retailing, channel design, logistics, Modern Trends in retailing.

7 Hours

Course Outcomes (CO):**At the end of the course the student will be able to**

CO1	Explain the basic marketing concepts
CO2	Interpret the buying behaviour of customers and role of marketing segments
CO3	Explain the role of product pricing and marketing research in the competitive global business environment
CO4	Analyse the marketing plans and strategies.
CO5	Explain the role of sales, advertising and distribution in marketing to achieve the goals of marketing
