## Regulations and Curriculum for Bachelor of Technology (B.Tech.) in Civil Engineering

Version 2023.02

## Regulations and Curriculum for

## Bachelor of Technology (B. Tech.)

Choice Based Credit System (CBCS) Effective from AY 2023-24

(Deemed to be University under Section 3 of UGC Act, 1956)
(Placed under Category 'A' by MHRD, Govt. of India, Accredited with 'A+' Grade by NAAC)
University Enclave, Medical Sciences Complex, Deralakatte,
Mangaluru – 575 018, Karnataka INDIA

Tel: +91-824-2204300/01/02/03, Fax: 91-824-2204305 Website: www.nitte.edu.in E-mail: info@nitte.edu.in

#### **VISION**

To build a humane society through excellence in the education and healthcare

#### **MISSION**

To develop

Nitte (Deemed to be University)

As a center of excellence imparting quality education,

Generating competent, skilled manpower to face the scientific and social challenges with a high degree of credibility, integrity,

ethical standards and social concern

## Regulations and Curriculum B.Tech. Degree Programs Choice based Credit System (CBCS)

## Effective from Academic Year

2023 - 2024

Curriculum for Acquiring Professional Skills (CAPS)

With Scheme of Teaching & Examination

### **REGULATIONS: 2023**

# COMMON TO ALL B.Tech. DEGREE PROGRAMS CHOICE BASED CREDIT SYSTEM (CBCS)

**Version 2023.02** 

#### **Choice Based Credit System (CBCS)**

- 1. Choice for the selection of courses during each semester
- 2. Choice in planning the academic activities by selecting desired number of courses per semester
- 3. Balanced curriculum with engineering, science, humanities, and management courses.
- 4. Project based learning (PBL) which focusses on experiential learning
- 5. Opportunities to study inter-disciplinary courses.
- 6. Enabling slow learners by offering important courses in all semesters.
- 7. Optional Summer semester
- 8. Opportunity to get associated in research projects to acquire research experience
- 9. Value addition with Honors / Minor credentials.

#### **Curriculum for Acquiring Professional Skills (CAPS)**

- 1. Practicing outcome-based education (OBE) where Courses made student-centric rather than teacher-centric
- 2. Provisions for courses integrated with Lab/ PBL component
- 3. Focus on experiential learning
- 4. Ability enhancement and skill development courses as per National Education Policy (NEP) 2020
- 5. Focus on Industry Internship and Research Internship
- 6. Students to work on real world/interdisciplinary problems in major project
- 7. Importance is given to creativity, innovation, and development of entrepreneurship skills

## **Key Information**

Program Title	Bachelor of Technology
	Abbreviated as B.Tech.
Short description	Four-year, eight semester Choice Based Credit System (CBCS) type
	of Undergraduate Engineering Degree Program with English as
	medium of instruction.
Program Code	14ENGR04D2
Revision version	2023.02
	These regulations may be modified from time to time as mandated
	by the policies of the University. Revisions are to be recommended
	by the Board of Studies for Civil Engineering and approved by the
	Academic Council.
Effective from	09-03-2024
Approvals	Approved in the 54th Academic Council meeting of NITTE
	(Deemed to be University), held on 24.06.2023 and vide
	Notification of Ref: N(DU)/REG/AC-NMAMIT/2022-23/1264
	dated 18.07.2023.
	Approved in the 56th Academic Council meeting of NITTE
	(Deemed to be University), held on 23.02.2024 and vide
	Notification Ref: N(DU)/REG/AC-NMAMIT/2023-24/924
	dated 09.03.2024. and Notification Ref: N(DU)/REG/AC-
	NMAMIT/2023-24/925 dated 09.03.2024
Program offered at	NMAM Institute of Technology,
	Off -Campus Centre, Nitte, 574110, Karkala Taluk
Grievance and	All disputes arising from this set of regulations shall be addressed to
dispute resolution	the Board of Management. The decision of the Board of
	Management is final and binding on all parties concerned. Further,
	any legal disputes arising out of this set of regulations shall be
	limited to jurisdiction of Courts of Mangalore only

#### **PREAMBLE**

NMAM Institute of Technology (NMAMIT) was established in 1986 and is located at Nitte and off-campus center of NITTE (Deemed to be University), accredited by National Assessment & Accreditation Council (NAAC) with 'A+' grade. NMAMIT is recognized by the All-India Council for Technical Education (AICTE), New Delhi.

The Bachelor of Technology (B. Tech.) Programs focus on Pursuing Excellence, Empowering people, and Partnering in Community Development. Out of eleven UG Programs i.e., Artificial Intelligence & Machine Learning (AM), Artificial Intelligence & Data Science (AD), Biotechnology (BT), Computer & Communication Engineering (CC), Computer Science & Engineering(CS), Civil Engineering(CV), Electronics & Communication Engineering (EC), Electrical & Electronics Engineering (EE), Information Science & Engineering (IS), Mechanical Engineering(ME) and Robotics & Artificial Intelligence (RI), all seven eligible UG Programs i.e., BT, CS, CV, EC, EE, IS and ME are accredited by NBA, New Delhi under Tier - I category till 30th June 2025.

The curriculum is jointly approved by members of the Board of Studies (BoS) and Academic Council drawn from academia, Industry, Alumni, and working professionals from Industry, and has been designed to integrate hands-on practical training with the concepts of theory courses to enhance the learning experience.

The Curriculum focuses on students Acquiring Professional Skills (CAPS) through rigorous theoretical training using innovations in pedagogy, experiential learning, active learning, collaborative learning, critical thinking, project planning, Project Based Learning (PBL), Ability enhancement courses for skill-building, effective communication, professional practice, creativity & innovation and developing entrepreneurial skills.

The focus of the Institution is to impart Quality Education to generate competent, Skilled, and Humane Manpower to face emerging Scientific, Technological, Managerial and Social Challenges with Credibility, Integrity, Ethics, and Social Concern.

In the present scenario, students wish to make plans for a bright future. However, student aspirations and industry demands are highly diverse. Employers expect the graduates possess multi-disciplinary competency, Information and Communication Technology (ICT), and leadership skills. In this context, NMAMIT offers the opportunity to the students to select the courses of their choice and helps them in grooming to have well-rounded personalities and become industry ready.

Efforts have been made to make the syllabus compliant with international professional societies. As part of providing quality engineering education, at NMAMIT, Nitte, it has initiated the Choice Based Credit System (CBCS) into its academic curriculum. By this, the students can register for courses of their choice and alter the pace of learning within the broad framework of academic courses and credit requirements. CBCS allows students to plan for their academic load and alter it as they progress in learning. Students also have the option of choosing courses from a pool of courses within each classification. Ample options are given to choose interdisciplinary courses from other programs which will help the student to develop additional skills. Slow learners will also be benefitted since important courses are offered in all semesters. This arrangement helps the

students to re-register and clear the backlog courses in the subsequent semester. Suitable provisions are made for fast learners to associate them with research activities of faculty members and contribute to research beyond the working hours.

A faculty advisor helps the student in identifying the courses to be studied in each semester based on program requirements, course prerequisites, student's interest in various disciplines, past academic performance, and courses offered by the departments.

Learning becomes more 'experiential' by carrying out labs associated with theory, mini-projects, and Project Based Learning (PBL) as a part of many courses which enhances the capability of students in understanding and apply Engineering /Technology concepts to solve real life-problems. Hence students will develop the ability to apply the gained knowledge in multi-disciplinary projects and be able to take up major projects based on real-world problems and come up with better solutions while addressing social concerns.

## REGULATIONS COMMON TO ALL B.Tech. (CBCS) DEGREE PROGRAMS OF

**NITTE** (Deemed to be University)

#### 1. INTRODUCTION

- **1.1** The general regulations are common to all B.Tech.(CBCS) Degree Programs conducted at the NMAM Institute of Technology (NMAMIT), off-campus center of NITTE (Deemed to be University) and shall be called "B.Tech. Regulations".
- 1.2 The provisions contained in this set of regulations govern the policies and procedures on the Registration of students, imparting instructions of courses, the conduct of the examination & evaluation, certification of student performance, and all amendments related to the said Degree program(s).
- 1.3 This set of Regulations, on approval by the Academic Council and Governing Council, shall supersede all the corresponding earlier sets of regulations of the B. Tech Degree program of NITTE (Deemed to be University) along with all the amendments thereto, and shall be binding on all students undergoing the Graduate Degree Program(s) (Choice Based Credit System) conducted at the NMAMIT, Nitte with effect from its date of approval. This set of Regulations may evolve and get modified or changed through appropriate approvals from the Academic Council / Governing Council from time to time and shall be binding on all stakeholders (The Students, Faculty, Staff of Departments of NMAMIT, Nitte). The decisions of the Academic Council / Governing Council shall be final and binding.
- **1.4** To guarantee fairness and justice to the parties concerned given the periodic evolutionary refinements, any specific issues or matters of concern shall be addressed separately, by the appropriate authorities, as and when found necessary.
- 1.5 The Academic Council may consider any issues or matters of Concern relating to any or all the academic activities of Engineering courses for appropriate action, irrespective of whether a reference is made here in this set of Regulations or otherwise.
- **1.6** The program shall be called **Bachelor of Technology**, abbreviated as B.Tech. (Program Specialization).

#### 2. ELIGIBILITY FOR ADMISSION

Sl. No	Program	Duration	Eligibility
1	B. Tech.	4 years	Passed 10+2 examination with Physics/ Mathematics / Chemistry/ Computer Science/ Electronics/ Information Technology/ Biology/ Informatics Practices/ Biotechnology/Technical Vocational subject as per Table-1 Obtained at least 45% marks (40% marks in case of candidates belonging to reserved category) in the above subjects taken together.
2	B.Tech. (Lateral Entry to Second year)	3 years	Passed Minimum THREE years / TWO years (Lateral Entry) Diploma examination with at least 45% marks (40% marks in case of candidates belonging to reserved category) in relevant branch of Engineering and Technology.  (The University will offer suitable bridge courses such as Mathematics, Physics, Engineering drawing, etc., for the students coming from diverse backgrounds to prepare Level playing field and desired learning outcomes of the program)

1	Table-1 Academic Level and Credit Framework for admission to Bachelor of Technology (B.Tech.) degree program									
Sl. No.	Academic Level	Desired Entry Qualifications at different levels.	NHEQF / NSQF Level at Exit	Unified Credit Level (UCF) at Exit						
1	12 <sup>th</sup> Std.	-	4	4						
2	First Year B.Tech. Degree	12 <sup>th</sup> Completed (NHEQF/UCF level 4 completed)	5	4.5						
3	Second Year B.Tech. Degree	A candidate with a Diploma in the appropriate branch of Engineering /Equivalent Vocational or Technical Program with NHEQF level 5/UCF level 4.5 completed		5						

#### 2.1 Qualifications from foreign countries

Candidates with qualifications from educational institutions outside of India may be admitted to the program(s) subject to the establishment of equivalence by the university. The Program Committee will evaluate and establish the eligibility of such candidates.

## 3. PROGRAM PATHS, EXIT OPTIONS, AND DURATION OF THE B. TECH. PROGRAM

3.1 Program paths, exit options

Sr. No	Academic Level	Entry Level Qualifications	Qualifications at Exit	NCrF Level
1	1 <sup>st</sup> yr. of UG Degree	A candidate completing 10+2 years with Diploma of Vocation or passed 12 <sup>th</sup> std. or equivalent vocational training with NCrF level 4	UG Certificate*	4.5
2	2 <sup>nd</sup> yr. of UG Degree	A candidate with Diploma in appropriate branch of Engineering/ UG Certificate/ Equivalent Vocational or Technical Program NCrF level 4.5	UG Diploma (Engg.)*	5.0
3	3rd yr. of UG Degree	A candidate with 10+3+1/12+2/ UG Diploma (Engg.) in appropriate domain with NCrF level 5	B. Sc (Engg.)*	5.5
	Final yr. of UG Degree	A candidate with 3 yrs. Bachelor degree in Vocation / B.Sc. (Engg.) with NCrF level 5.5	B. Tech (on completion of 160 credits with a minimum CGPA of 5)	6
4	Final yr. of UG Degree with Honors	A candidate with 3 yrs. Bachelor degree in Vocation / B.Sc. (Engg.) with NCrF level 5.5	B. Tech (Honors) 178 credits (Additional 18 credits over and above 160 credits in the same discipline	6
	Final yr. of UG Degree with a minor in (Other Discipline).	A candidate with 3 yrs. Bachelor degree in Vocation / B.Sc. (Engg.) with NCrF level 5.5	B. Tech with Minor 178 credits. Additional 18 credits over and above 160 credits in other disciplines	6

<sup>\*</sup> It is mandatory to earn 10 credits through internship/Training/specialized courses before the award of Qualifications at exit.

#### 3.2 Duration of the B. Tech. program

- (a) The B. Tech Program shall extend over a period of a total duration of 4 years for students admitted during the first year of the program.
- (b) The total duration shall be 3 years for students admitted to the second year under the

- lateral entry scheme.
- (c) The maximum period which a student can take to complete a full-time academic program is eight years / Six years for Lateral entry diploma students for B.Tech.
- (d) Each year shall have the following schedule with 5 ½ days a week. Suggested break down of Academic Year into Semesters

1.	No. of	There are three semesters in an academic year	nr.						
-7	Semesters	Two Main semesters (Odd, Even) followed by							
	/ Year	Normally the Odd Semester will be from A	•						
	7 1 541	Even Semester from January to May during	· ·						
		The optional summer semester is offered during the vacation period							
		of the even semester.	aring the vacation period						
		The summer semester is offered considering courses of needy students, subject to the available.	· ·

	Activities	Registration of Courses & Course Work	(16)						
	(Weeks)	Examination Preparation and Examination	(04)						
		Total	(20)						
		Summer Semester							
		Registration of Courses & Course Work	(05)						
		Examination Preparation and Examination	(03)						
		Total	(08)						
		Declaration of results:	02 weeks from						
			the date of the						
			last						
		Inter-Semester Recess:	examination						
			(02)						
		After each Main Semester	(02)						
		<b>Total Vacation:</b> 10 weeks (for those who summer semester) and 4 weeks (for those who semester)							

(Note: In each semester, there will be provision for students to register for courses at the beginning, dropping of courses in the middle, and withdraw from courses towards the end,

under the advice of a faculty member. These facilities are expected to enhance the learning capabilities of students, minimizing their chances of failure in courses registered and ensuring their better monitoring by Faculty Advisors).

A candidate shall be allowed a maximum duration of eight years from the first semester of admission to become eligible for the award of a Bachelor's degree.

The calendar of events in respect of the program shall be fixed by the Institution from time to time, but preferably in line with the suggested academic calendar of the NITTE (Deemed to be University).

#### 4. DEGREE PROGRAMS

**4.1** Undergraduate B. Tech. Degree Programs are offered in the following disciplines by the respective program hosting departments listed below:

	program nosting departments instead on the	
i)	Biotechnology Engineering	(BT)
ii)	Computer Science & Engineering	(CS)
iii)	Computer Science & Engineering (Cyber Security)	(CB)
iv)	Civil Engineering	(CV)
v)	Electronics & Communication Engineering	(EC)
vi)	Electronics Engineering (VLSI Design and Technology)	(VT)
vii)	Electrical & Electronics Engineering	(EE)
viii)	Information Science & Engineering	(IS)
ix)	Mechanical Engineering	(ME)
x)	Artificial Intelligence and Machine Learning Engineering	(AM)
xi)	Computer and Communication Engineering	(CC)
xii)	Robotics and Artificial Intelligence Engineering	(RI)
xiii)	Artificial Intelligence and Data Science	(AD)
Other te	aching departments are —	
i)	Chemistry	(CY)
ii)	Humanities	(HU)
iii)	Management and Social Sciences	(MG)
iv)	Mathematics	(MA)
v)	Physics	(PH)

**4.2** The provisions of these regulations shall apply to any new discipline that may be introduced from time to time and appended to the above list.

#### 5. CREDIT SYSTEM

In the Credit System, the course work of students is unitized, and each unit is assigned one credit after a student completes the teaching-learning process as prescribed for that unit and is successful in its assessment.

- **5.1 Credit Definition:** The following widely accepted definition for credit can provide good flexibility to the students and strengthens CBCS under the University. Here, one unit of course work and its corresponding one credit (while referring to the main semester) shall be equal to:
  - Four-credit theory courses shall be designed for 50 hours of the Teaching-Learning process.

- Three-credit theory courses shall be designed for 40 hours of the Teaching-Learning process.
- Two-credit theory courses shall be designed for 25 hours of the Teaching-Learning process
- One credit theory course shall be designed for 15 hours of the Teaching-Learning process

The above figures shall also be applicable in the case of the summer semester. Other student activities which are not demanding intellectually, or which do not lend to effective assessment, like practical training, study tours, and attending guest lectures shall not carry any credit.

## 5.2 Credit Assignment and Lower & Upper Limits for Course Credits Registration in a Semester

All courses comprise of specific Lecture/Tutorial/Practical/Project (L-T-P-J) schedule. The course credits are fixed based on the following norms.

Lecture / Tutorials / Practical:

- 1-hour Lecture per week is assigned 1.0 Credit.
- 2-hour Tutorial session per week is assigned 1.0 Credit.
- 2-hour Lab. Session/project work per week is assigned 1.0 credit.

For example,

- A theory course with L-T-P schedule of 3-2-0 hours will be assigned 4.0 credits.
- A laboratory practical course with L-T-P schedule of 0-0-2 hours will be assigned 1.0 credit.
- Calculation of Contact Hours / Week A Typical Example

#### Example:

An LTP-C of 2-2-2-4 means 2 instructional units based on classroom lecture (L), one instructional unit of the tutorial (T), and one laboratory (P) based instructional unit all delivered during a calendar week and repeated for the entire duration of the semester to earn 4 credits (C) after passing the course.

• As advised by the faculty advisor, a student may register, between a minimum of 16 credits and up to a maximum of 28 credits.

The maximum number of credits a student can register during a summer semester shall be 16. However, in special cases, the student may be permitted to register additional credits with the approval of the Department Undergraduate Committee (DUGC). There is no minimum number of credits fixed for course registration during the summer semester.

#### 6 REGISTRATION

6.1 Every student after consulting his/ her Faculty Advisor in the parent department shall register for the approved courses (core and elective) to earn credits for meeting the requirements of a degree program at the commencement of each Semester on the days fixed for such registration and notified in the academic calendar. Students who fail to register on or before the specified date will be allowed to register within one week of the last date by paying a late fee. Such courses together with their grade and credits earned will be included in the grade card issued by the University at the end of each semester,

like ODD, EVEN, and summer and it forms the basis for determining the student's performance in that semester.

6.1.1 Each course will be identified by a unique Course Code of seven alpha-numerals (two alphabets followed by 5 digits). The alphabets reflect the discipline to which the course belongs. The first numeral (after the alphabet) indicates the learning level (based on prerequisites) of the course, and the rest of the three numerals indicate a running serial number. Each course also has its version to track the revisions carried out in its syllabus over time as represented by the last numerical separated by a hyphen (-). Example: EE1001-1 represents the course offered by EE Dept., Level-1, course serial number is 001 and the version is 1.

#### 6.2 Mandatory Pre-Registration for higher semester

To facilitate proper planning of the academic activities of the Semester, the students must declare their intention to register for courses of higher semesters (3rd and above) at least two weeks before the end of the current semester choosing the courses offered by each department in the next higher semester which is displayed on the Department Notice Board at least 4 weeks before the last working day of the semester.

Registration to a higher semester is allowed only if the student fulfills the following conditions

- Satisfied all the academic requirements to continue with the program of studies
- Cleared all Institute, hostel, and library dues and fines, if any, of the previous semester
- Paid all required fees of the Institute and the hostel for the current semester
- Has not been debarred from registering on any specific grounds by the Institute.

#### **6.3** Registering for Backlog Courses

- **6.3.1** Students who have not cleared a course (Theory/ Lab/ project) are shown with "F" grade. A course having an 'F' grade will be considered as a backlog and it has to be re-registered in the subsequent semesters. F-graded courses are eligible to register for the next level course (pre-requisite is met).
- **6.3.2** Re-registration fee will be as per the university norms existing at the time of reregistration. When a course is re-registered, the evaluation marks of that course shall be treated as canceled/ reset.
- **6.3.3** To provide an early opportunity for students to clear their backlog of courses, efforts will be made to offer as many courses as possible during Odd, Even and summer semesters.

#### 7 ADD/DROP/AUDIT OPTIONS

#### 7.1 Registration of courses

Each student shall have to register for course work at the beginning of a semester within 2 to 3 days of commencement after discussing with the course teacher and under faculty advice. The permissible course load is to be either average credits (20) or to be within the limits of minimum (16) and maximum (28) credits.

#### 7.2 DROP-option

During a specified period in the middle of a semester student's performance in CIE is

reviewed by the faculty advisor. Following a poor performance by a student, he/she can be facilitated to drop identified course(s) (up to the minimum credits specified for the semester). Such course(s) will not be mentioned in the Grade card. Such courses are to be re-registered by these students and taken up for study at a later point in time.

#### 7.3 Withdrawal from courses (Letter Grade "W")

During a specific period specified towards the end of the semester, a student's performance in CIE is reviewed by the faculty advisors. Following a poor performance by a student in the identified course (s) he/she is advised to withdraw from such course(s) (up to the minimum credits specified for the semester) with a mention in the Grade card (Grade "W"). Such courses to be re-registered by these students and taken up for study at a later point in time.

#### 7.4 AUDIT-option (Letter Grade "U")

A student can register for courses for audit only, to supplement his/her knowledge and/or skills. The audit courses shall not be considered in determining the student's academic performance (SGPA and CGPA) in the semester. "U" grade is awarded to such courses and will be reflected in the grade card on satisfying the attendance requirements and CIE requirements. The candidate need not appear for SEE in such courses. However, CORE courses shall not be made available for audit.

#### **8 COURSE STRUCTURE:**

#### 8.1 Types of courses

A "Course" is defined as a unit of learning that typically lasts one semester, led by one or more teachers, for a fixed roster of students. A course has identified course outcomes, modules/units of study, specified teaching-learning methods, and assessment schemes. A course may be designed to include lectures, tutorials, practical, laboratory work, field work, project work, internship experiences, seminars, self-study components, online learning modules, etc. in any combination

The following types of courses are included in the B. Tech. program:

- (a) **Humanities, Social Sciences, and Management Courses (HSMC):** These are common courses for all disciplines.
- (b) **Basic Science Courses (BSC):** Physics, Chemistry, and Mathematics: These are mandatory for all disciplines.
- (c) **Engineering Science Courses (ESC):** Basics of Electrical/ Electronics/ Civil/ Mechanical/ Computer Engineering, etc. These are mandatory for all disciplines.
- (e) **Professional Core Courses (PCC):** These are the professional Core Courses, relevant to the chosen specialization/ branch. The core courses shall be compulsorily studied by students, and it is mandatory to complete them to fulfill the requirements of a Program.
- (f) **Professional Elective Courses (PEC):** These are professional Electives, relevant to the chosen specialization/branch and can be chosen from the pool of courses. It shall be supportive to the discipline providing extended scope/enabling exposure to some other discipline /domain and nurturing student proficiency skills
- (g) **Open Elective Courses (OEC):** These are the Elective Courses from other technical areas and/ or emerging fields. Students of other departments shall opt for these courses for fulfilling the eligibility and prerequisites mentioned in the syllabus.
- (h) **Integrated Professional Core Courses (IPCC):** It refers to Professional Theory Core Course Integrated with Practical of the same course. Credit for IPCC shall be 04

- considering L: T: P as 3:0:1 or L: T:P as 2:1:1, (where L, T, and P represent credits not hours per week)
- (i) **Holistic Education Courses (HEC):** These courses are designed to look into the emotional, social, ethical and academic needs of students in an integrated learning format. It helps in the engagement of all aspects of the learner including body, mind and spirit.
- (j) **Vocational Education Courses (VEC):** These courses are designed to prepare students for jobs that are based on manual or practical activities, traditionally non-academic related to a specific trade, occupation or vocation.
- (k) **Emerging Technology Courses (ETC):** These courses are designed to teach students about developing technologies that will be available within the next five to ten years and are expected to create significant social or economic effects.
- (l) **Programming Language Courses (PLC):** These courses are designed to teach students languages that can be used to communicate with computers for developing and working on different applications.

## (m) University Core Courses (UCC): These are compulsory core courses with common course codes across all the disciplines

- i. **Project Work (PROJ):** Provide experiential learning opportunities for students. Students are required individually, or in a small group, to select and complete a project that may include review, design, development, curation, analysis, etc. with the application of skills and knowledge relevant to the area of study. Mini-project and Project work carried out at the parent Institution, or any university / Government recognized organization without affecting the regular class work
- ii. **Internship (INT):** The internship (a form of experimental learning) program is a workplace-based professional learning experience that offers supervised exposure to real-life work experience in an area related to the field of study or career interest. An internship may be undertaken at a workplace such as an industry/R&D organization/Government organization, or any other reputed organization/ institution recognized for the purpose by the University. The internship program not only helps fresh pass-outs in gaining professional know-how but also benefits corporate sectors. The internship also enhances the employability skills of the student passing out from Technical Institutions
- (n) **Mandatory Non-Credit Courses (MNC):** These courses are mandatory, without the benefit of a grade or credit, passing each mandatory course is required to qualify for the award of a degree.
  - Assessment of these courses is conducted in the college and will include Continuous Internal Evaluation (CIE). University Semester End Evaluation (SEE) may not be necessary for these courses.
  - A minimum of 40% of the prescribed marks of CIE and SEE (If any) are required to secure a passing grade in these courses.
  - The 'PP' grade is awarded for a Pass in the course and the 'NP' grade is awarded for a Fail in the course. In case an 'NP' grade is awarded, the student has to reregister for the same course wherein he has no alternative options.

- The "PP" and "NP" grades do not carry grade points and are hence not included in the Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA) computations. However, such non-credit mandatory courses are required to be included in the students' performance records (transcript) with Pass or Fail (PP or NP).
- Courses that come under this category are the following.
  - Engineering Visualization, Employability Skill Development, Environmental Science, Kannada etc.
- (o) **Ability Enhancement Courses (AEC)** These courses are designed to help students to enhance their skills in language, communication, personality development, etc. They also promote a deeper understanding of courses like social sciences, ethics, culture, human behavior human rights, and the law. Ability Enhancement Courses are based upon the content that leads to Knowledge enhancement.

#### 8.2 Typical Breakdown for the B.Tech. Degree Curriculum:

Sl. No.	Course Category	Credit Range	Suggested Credits
1.	Basic Science Courses (BSC)	18-23	22
2.	Engineering Science Courses (ESC)	10-15	13
3.	Emerging Technology Courses (ETC)	03-05	03
4.	Programming Language Courses (PLC)	03-05	03
5.	Professional Core Courses (PCC)	52 - 58	55
6.	Professional Elective Courses (PEC)	12-18	15
7.	Open Elective Courses (OEC)	6	6
8.	Humanities, Social Sciences and Management courses (HSMC)	09-15	12
9.	Ability Enhancement Courses (AEC)	9	9
10.	Mandatory Non-credit Courses (MNC)	Non-Credit	0
11.	Holistic Education Courses (HEC)	2	1
12.	Vocational Education Courses (VEC)	1	1
13.	Project Work (PROJ) (UCC)	10-12	10
14.	Internship (INT) (UCC)	8-12	10
15.	Note: Student can register between 16 to 28 credits per semeste	er	160
	Total minimum Credits to be earned: 160		100

**8.2.1** The Department Undergraduate Committee (DUGC) will discuss and recommend the exact credits offered for the program for the above components, the semester-wise distribution among them, as well as the syllabi of all undergraduate courses offered by the department from time to time before sending the same to the Board of Studies (BOS). The BOS will consider the proposals from the departments and make recommendations to the Academic Council for consideration and approval.

#### 8.3 The earned Credit Requirements for the B.Tech. Degree is 160.

Degree is awarded by prescribing the total number of credits to be earned, rather than by using the program duration, giving flexibility to a student to plan their career.

#### 8.4 Program structure and suggested Course offerings

#### 8.5 Eligibility for submission of Project Work Report

- **8.5.1** Project work during the 8th semester shall be taken up batch-wise and report can be submitted for evaluation only on completion of a minimum of **122 credits** and for Diploma lateral entry students (those who have joined the second year B.Tech.) the same is **88 credits.**
- **8.5.2** Project work can be carried out as domain-specific /interdisciplinary under the guidance of faculty/ faculty members. They can also opt for an advanced Internship or research Internship in an Industry / Research Institution/Center of excellence.
- **8.5.3** Project viva-voce examination shall be conducted individually.

#### 8.6 ELECTIVES

- **8.6.1** A candidate shall take electives in each semester from groups of electives, commencing from the 5th semester.
- **8.6.2** The minimum number of students to be registered for any Elective offered shall not be less than fifteen (15) and should not exceed forty (40).
- **8.6.3** A candidate shall opt for his/her choice of electives and register for the same at the beginning of each of the 5th to 7th semesters if pre-registration is not done. The candidate is permitted to opt for a change of elective within 15 days from the date of commencement of the semester as per the academic calendar of the college.

#### 9 ATTENDANCE REQUIREMENT:

- **9.1** Each semester is considered as a unit and the candidate has to put in a minimum attendance of 85% in each subject with a provision of condoning 10% of the attendance by the Principal for reasons such as medical grounds, participation in University level sports, cultural activities, seminars, workshops, and paper presentation.
- **9.2** The basis for the calculation of the attendance shall be the term prescribed by the institution by its calendar of events. For the first semester students, the same is reckoned from the date of admission to the course.
- **9.3** The students shall be informed about their attendance position in the first week of every month by the College so that the students shall be cautioned to make up for the shortage.
- **9.4** A candidate having a shortage of attendance (<75%) in any course(s) registered shall not be allowed to appear for SEE of such course(s). Such students will be awarded an 'N' grade in these courses.
- 9.5 He/she shall have to repeat those course(s) with an 'N' grade and shall re-register for the same course(s) core or elective, as the case may be when the particular course is offered next either in a main (odd/even) or summer semester.

#### 9.6 Attendance in CIE and SEE:

Attendance in all examinations both CIE and SEE of each course registered shall be compulsory and there shall not be any provision for re-examinations. Any student against whom any disciplinary action is pending shall not be permitted to attend any SEE in that semester.

#### 10 WITHDRAWAL FROM THE PROGRAM

#### 10.1 Temporary Withdrawal

- a) A student who has been admitted to a degree program of the college may be permitted once during the course to withdraw temporarily, for one semester, on the grounds of prolonged illness or grave calamity in the family, etc., provided
  - i. The student applies to the College within 6 weeks of the commencement of the college stating fully the reasons for withdrawal together with supporting documents and endorsement from his parent/guardian.
- ii. The College is satisfied with the genuineness of the case and that even by considering the expected period of withdrawal, the student can complete the program requirements (160 credits) within the time limits specified by the university.
- iii. The student does not have any dues or demands at the College / University including tuition and other fees as well as library material.
- iv. A student availing of temporary withdrawal shall be required to pay such fees and/or charges as may be fixed by the college until his/her name appears on the student's roll list. The fees/charges once paid shall not be refunded.
- v. A student will be entitled to avail of the temporary withdrawal facility only once during his/her studentship. However, any other concession for the concerned student shall have to be approved by the academic council.

#### 10.2 Permanent Withdrawal

Any student who withdraws the admission before the closing date of admission for the Academic Session is eligible for the refund of the deposits only. Fees once paid will not be refunded on any account.

Once the admission for the year is closed, the following conditions govern withdrawal of admissions.

- i) A student who wants to leave the College for good will be permitted to do so (and take a Transfer Certificate from the College, if needed), only after clearing all other dues if any.
- ii) Those students who have received any scholarship, stipend, or other forms of assistance from the College shall repay all such amounts.
- iii) The decision of the Principal of the College regarding the withdrawal of a student is final and binding.

#### 11 EVALUATION SYSTEM

- **11.1** The Academic Performance Evaluation of a student shall be according to a Letter Grading System, based on the Class Performance Distribution.
- **11.2** The Letter grades O, A+, A, B+, B, C, P, and F indicate the level of academic achievement, assessed on a decimal (0-10) scale.
- 11.3 The Letter grade awarded to a student in a course, for which he has registered shall be based on his performance in quizzes, tutorials, assignments, etc., as applicable, in addition to two mid-semester examinations and one semester-end examination. The distribution of weightage among these components may be as follows.

Semester End Examination (SEE)	:	50% (50 marks)
Continuous Internal Evaluation (CIE)	:	50% (50 marks)

Regulations for B. Tech. Civil Engineering							
CIE	for Non-PBL Courses						
i)	Quizzes, Tutorials, Assignments,	:	10 marks				
	Seminars, etc.						
ii)	Mid-semester Examinations	:	40 marks				
CIE	for PBL/IPCC Courses						
i)	Project Based Learning (PBL)	:	50 marks				
ii)	Mid-semester Examinations	:	40 marks				
iii)	Quizzes, Tutorials, Assignments, Seminars, etc.	:	10 marks				
60% weightage for theory + 40% weightage for PBL/Practical							

- Any variation, other than the above distribution, requires the approval of the pertinent DUGC and Academic Council.
- **11.4** The letter grade awarded to a student in a 0-0-P (Practical) course, is based on an appropriate continuous evaluation scheme that the course instructor shall evolve, with the approval of the pertinent DUGC and the performance in SEE held on the specified period in a semester.
- 11.5 Evaluation Scheme (Refer to Appendix-B for detailed evaluation guidelines): The course Instructor shall announce in the class and/or display at the Notice board/faculty door/website the details of the Evaluation Scheme, including the distribution of the weightage for each of the components and method of conversion from the raw scores to the letter-grades within the first week of the semester in which the course is offered so that there are no ambiguities in communicating the same to all the students concerned.
  - **11.5.1 Internship:** Mandatory Internship is in two parts. Internship-I (2 weeks) and Internship-II (8 weeks)

#### 11.5.2 Internship-I

- 11.5.2.1 All the students admitted to the 1<sup>st</sup> semester of engineering programs shall have to undergo Internship-I of 02 weeks (or 80 to 90 hrs duration) during the first year. The internship shall include Inter / Intra Institutional activities. A viva voce examination (Presentation followed by question-answer session) shall be conducted during the 2<sup>nd</sup> semester (for lateral entry students, during the 3<sup>rd</sup> semester) and the prescribed credit shall be included in the 4th-semester grade card.
- 11.5.2.2 All the students admitted to the 3rd semester of Engineering programs (Lateral Entry Category) shall have to undergo a mandatory internship of 02 weeks (during the 3<sup>rd</sup> semester or the intervening period of the 3<sup>rd</sup> and 4<sup>th</sup> semesters). The internship shall include Inter/Intra Institutional activities.
- 11.5.2.3 The internship shall be considered as a head of passing and shall be considered for the award of a degree. Those, who do not take up / complete the internship shall be declared to fail and shall have to complete it during subsequent University examinations after satisfying the internship requirements. (The faculty coordinator or mentor has to monitor the student's internship progress and interact to guide them for the successful completion of the internship).

#### 11.5.2.4 Procedure for the Evaluation of Internship-I

- a) Students should submit the reports immediately on completion of the Internship to the respective mentors
- b) The Examination of the internship will be carried out by the mentor
- c) The Internship-I shall be slated for 100 marks CIE only and will not have SEE.
- d) Internship-I marks are based on CIE marks (25 marks for the first presentation, 25 marks for the second presentation, and 50 marks for the report and final presentation).
- e) A Viva-Voce examination is conducted during I/II/III Semesters (Presentation followed by question-answer session) and the prescribed credit shall be included in the IV semester grade card.

#### 11.5.3 Internship-II

- **11.5.3.1** All the students admitted to engineering programs shall have to undergo Internship-II of 08 weeks during the second and third year of their Engineering studies.
- 11.5.3.2 During the intervening period of the IV & V semesters and VI & VII semesters, students shall be ready for industrial experience. Therefore, they shall choose to undergo 8 weeks Internship involving Innovation / Entrepreneurship/ or short-term (about 2 weeks) societal-related activities and 6 weeks Industry Internship.
- 11.5.4 **Project work evaluation:** The evaluation of CIE of the project work shall be based on the progress of the student in the work assigned by the project supervisor, periodically evaluated by him/her together with a department committee constituted for this purpose. Seminar presentation, project report, and final oral examination conducted by the project evaluation committee at the department level shall form the SEE of the project work.
- 11.5.5 In the case of other requirements, such as seminar, field work, or comprehensive viva voce, if any, the assessment shall be made as laid down by the DUGC/Academic council.
- **11.5.6** There shall be no re-examination for any course in the credit system. However, students
  - who have abstained from attending CIE or SEE without valid reasons ("N" grade), or
  - who have failed (F grade) to meet the minimum passing standards prescribed for CIE and/or SEE or
  - who have been detained for shortage of attendance or who have withdrawn (W grade) who have dropped any course shall be required to re-register for such course(s) and go through CIE and SEE again and obtain a grade equal to or better than "P" Grade in each case.
  - While such students should re-register for the same course(s) if core, they can re-register for the alternative course(s) from among the elective courses, as the case may be. The re-registration shall be possible when the particular course is offered again either in a main (Odd/Even) or summer semester.

#### 11.6 Qualifying standards

Evaluation Method	Qualifying Standard
Sessional (CIE)	Score: ≥40% (≥20 marks)
Terminal (SEE)	Score: ≥40% (≥20 marks)
For securing a final Pass	Total 40 % of the Course maximum marks (100)
	i.e., the sum of the CIE and SEE marks prescribed for
	the Course is desired.

#### 11.7 Grading System

The letter grade awarded to a student for his/her performance in a course is based on Absolute Grading.

**11.7.1** Absolute Grading – Letter Grade and its range **The grade point scale for absolute grading** 

Marks Range (%)	Grade Point	Letter Grade	Descriptor
90 & above	10	О	Outstanding
80-89	9	A+	Excellent
70-79	8	A	Very Good
60-69	7	B+	Good
55-59	6	В	Above Average
50-54	5	С	Average
40-49	4	P	Pass
00-39	0	F	Fails
Absent	0	F	Absent

CGPA	Classification
7.00-& above	First Class with Distinction
6.00-6.99	First Class
5.00-5.99	Second Class
CGPA < 5.00*	Academic Probation / Non-compliance

- \* If a student secures CGPA< 5.0 at any point time during his/her studies, he/she will be on Academic Probation/Noncompliance (refer to sections 14.2 and 17.3 for more details.)
  - i) **Grade "N":** A candidate having a shortage of attendance (<75%) in any course(s) or CIE marks less than 40% shall not be allowed to appear for SEE of such course(s). Such students will be awarded an 'N' grade in these courses with a grade point of 0.
  - ii) The grade points are given above help in the evaluation of credit points earned by the student in a course as the credit points are equal to the number of credits assigned to the course multiplied by the grade points awarded to the student in that course. This shall be used in Arriving at the credit index of the student for that semester, as it is the total of all the credit points earned by the student for all the courses registered in that semester.

#### 11.8 Earning of Credits

A student shall be considered to have completed a course successfully and earned the

credits if he/she secures an acceptable letter grade in the range of O-P. The letter grade "F" in any course implies the failure of the student in that course and no credits earned.

- **11.8.1** The Transitional Grades "I", "W" and "X" would be awarded by the teachers in the following cases. These would be converted into one or the other of the letter grades (O-F) after the student completes the course requirements.
- **11.8.2 Grade "I"**: To a student having attendance ≥85% and CIE ≥70%, in a course, but remained absent from SEE for valid & convincing reasons acceptable to the College, like:
  - i) Illness or accident, which disabled him/her from attending SEE.
  - ii) A calamity in the family at the time of SEE required the student to be away from the College.
  - iii) However, the committee chaired by the Principal is authorized to relax the requirement of CIE  $\geq$  70% if the student is hospitalized or advised long-term rest after discharge from the hospital by the Doctor.
  - iv) Students who remain absent for Semester End Examinations due to valid reasons and those who are absent due to health reasons are required to submit the necessary documents along with their request to the Controller of Examinations to write Makeup Examinations within 2 working days of that examination for which he or she is absent, failing which they will not be given permission.
- **11.8.3 Grade "W":** To a student having satisfactory attendance at classes, but withdrawing from that course before the prescribed date in a semester under Faculty Advice
- 11.8.4 Grade "X": To a student having attendance ≥85% and CIE ≥70%, in a course but SEE performance could result in an F grade in the course. (No "F" grade will be awarded in this case, but the student's performance record is maintained separately).

#### 11.9 Summer / Fast Track semester

- 11.9.1 The students who have satisfied CIE and Attendance requirements for the course/s and obtained an F grade in SEE are permitted to appear directly in ensuing examination/s as backlog paper/s. The students need not re-register for such course/s in the summer / fast track semester. In case the student wishes to improve CIE/ he/she has to re-register for the summer / regular semester as and when offered next.
- **11.9.2** The student who obtains required attendance and CIE in the summer semester, but obtains an 'F' grade in SEE; is permitted to appear for SEE subsequently as backlog course/s. The student need not repeat the course for Attendance and CIE.
- 11.9.3 The course/s for which the student does not possess satisfactory attendance and CIE score shall be marked as 'N' on the Grade sheet. Such students are not permitted to SEE for the Courses marked as 'N' on the Grade sheet. The students have to re-register only for course/s marked as 'N' in the summer/ subsequent semester whenever that course is offered and obtain the required CIE and attendance. Subsequently, they are eligible to appear for SEE in such course/s.
- **11.9.4** Courses with Transitional Grades viz "W", "I", and "X" are also eligible to register in the summer semester in case they wish to improve their score in CIE.

- **11.9.5** All courses may not be offered in the summer semester. It is the discretion of the University to offer the courses based on the availability of resources. The Institutes shall notify timetable for the summer semester well in advance.
- **11.9.6** Summer Semester is optional; it is for the student to make the best use of the opportunity.
- **11.9.7** A student is permitted to register for a maximum of 16 credits in the Summer / fast track semester.
- **11.9.8** A student has to choose those courses which are offered by the Institution in a given summer Semester.
- **11.9.9** In the summer semester, each course needs to be offered for the required number of lectures/ tutorial/ laboratory hours as prescribed in the syllabus.

#### 11.10 Grade Card

Each student shall be issued a Grade Card at the end of each semester. This will have a list of all the courses registered by a student in the semester, together with their credits, the letter grades with grade points awarded. Only those courses registered for credit and having grade points shall be included in the computation of the students' performance like SGPA and CGPA and the courses are taken for audit will not form part of this computation. The results of mandatory courses, which are of the non-credit type shall also be reflected in the Grade card as PP (for Passed) or NP (for not passed). Each UG student shall have to obtain the grade PP in each mandatory course to qualify for the Degree awarded by the university.

#### 11.11 Re-evaluation and paper seeing.

Re-evaluation is permitted only for theory papers. The University, on receiving application within the stipulated time and remittance of a prescribed fee for re-evaluation, shall permit re-evaluation for the course/s applied. The marks obtained after re-evaluation shall be the final marks awarded.

#### 11.12 The Make-Up Examination

The Make-Up Examination facility would be available to students who may have missed attending the SEE of one or more course(s) in a semester for valid reasons and given the "I" grade; Also, students having the "X" grade shall be eligible to take advantage of this facility. **The makeup examination would be held as per dates notified in the Academic Calendar during the summer semester.** However, it would be possible to hold a makeup examination at any other time in the semester with the permission of the Academic Council of the College. In all these cases, the standard of makeup examinations shall be the same as the regular SEE for the course(s).

- a) All the "I" and "X" grades awarded to the students would be converted to appropriate letter grades after the make-up examinations. Any outstanding "I" and "X" grades after the last scheduled make-up examinations shall be automatically converted to "F" grades.
- b) All the "W" grades awarded to the students would be eligible for conversion to the appropriate letter grades only after the concerned students re-register for these courses in a main/ Summer semester and fulfill the passing standards for their CIE

and (CIE+SEE).

#### 11.13 Rules for grace marks

- 11.13.1 Grace marks up to 1% of the maximum total marks of the courses for which he/she is eligible and have registered (non-credit courses excluded) in the examination or 10 marks whichever is less shall be awarded to the failed course(s), (with a restriction of a maximum of 5 marks per course) provided on the award of such grace marks the candidate passes in that course(s).
- 11.13.2 No grace marks for change of grade point.

#### **EVALUATION OF PERFORMANCE** 12

The overall performance of a student will be indicated by two indices:

SGPA; which is the Semester Grade Point Average, and CGPA which is the Cumulative Grade Point Average.

SGPA for a semester is computed as follows.

$$SGPA = \frac{\sum[(Course\ Credits) \times (Grade\ Point)] \text{ (for all courses in that semester)}}{\sum[Course\ Credits]}$$

CGPA is computed as follows:

$$\Sigma[(Course\ Credits) \times (Grade\ Point)]$$

$$CGPA = \frac{\text{(for all courses excluding those with F grades until that semester)}}{\sum[Course\ Credits]}$$
(for all courses excluding those with F grades until that semester)

(for all courses excluding those with F grades until that semester)

#### 13 **COMMUNICATION OF GRADES**

The SGPA and CGPA respectively, facilitates the declaration of academic performance of a student at the end of a semester and the end of successive semesters. Both would be normally calculated to the second decimal position.

#### 14 REQUIREMENTS FOR VERTICAL PROGRESSION (PROMOTION / ELIGIBILITY TO HIGHER SEMESTERS)

- **14.1** All students are promoted to the next semester or year of their program, irrespective of their academic performance.
- 14.2 However, at any stage of his/her study, if a student reaches a CGPA below 5.00, the student will be on **Academic Probation** and is permitted to register for a maximum of 16 credits during odd semester of an academic year. However, the student has the choice to re-register for the courses/courses in which he/she has obtained an 'F'/ 'N' grade.

#### 14.3 A Student shall be declared fail if he/she

- (i) Has not satisfied the CIE requirements of any Course/s.
- (ii) Has not appeared for the SEE even after satisfying the attendance and CIE requirements.
- 14.4 Vertical Progression for regular students who have taken admission to the first year: Normally a student is expected to complete a minimum of 85% of credits by the end of the 7th semester. However, for submission of B.Tech. Major Project in 8th semester, the student should have completed at least 122 credits.

## 14.5 Vertical Progression in case of Diploma students admitted to Second year (lateral entry):

- 14.5.1 Lateral entry students should complete at least 85% of credits by the end of the 7<sup>th</sup> semester. However, for submission of B.Tech. Major Project in 8<sup>th</sup> semester, the student should have completed at least 88 credits.
- **14.5.2** Diploma students should register for mandatory non-credit Mathematics Courses Bridge Courses (i) Calculus and Laplace Transforms and (ii) Probability and Differential Equations prescribed during III and IV semesters respectively. They shall attend these bridge course classes during the respective semesters to satisfy attendance and CIE requirements.
- **14.5.3** Completion of Mathematics Courses Bridge Courses (i) Calculus and Laplace Transforms and (ii) Probability and Differential Equations shall be mandatory for the award of the degree.

#### 14.6 Termination from the program

A student shall be required to withdraw (discontinue) from the program and leave the college on the following grounds.

- i) Failure to secure a minimum CGPA of 5.0 at the end of 8 years (6 years for lateral entry students).
- ii) Failure to earn 160 credits (120 for lateral entry students) in 8 years (6 years for lateral entry students) of duration from the year of admission including the duration of temporary withdrawal (leave of absence).
- iii) Absence from classes for more than six weeks at a time in a semester without leave of absence being granted by competent authorities.
- iv) Failure to meet the standards of discipline as prescribed by the college from time to time.

#### 15 AWARD OF CLASS

Sometimes, it would be necessary to provide equivalence of these averages, viz., SGPA and CGPA with the percentages and/or classes awarded as in the conventional system of declaring the results of university examinations. This can be done by prescribing certain specific thresholds in these averages for Distinction, First Class and Second Class. This can be seen in the following Table.

Percentage Equivalence of Grade Points (For a 10-Point Scale)

Grade Point	Percentage of Marks*	Class
≥ 7.00	≥ 70%	First class with
		Distinction
≥ 6.00	≥ 60%	First Class
$5.0 \ge CGPA < 6.00$	50≥ Percentage < 60%	Second Class

Percentage  $* = (CGPA) \times 10$ 

#### 16 APPEAL FOR REVIEW OF GRADES

a. The entire process of evaluation shall be made transparent and the course instructor shall explain to a student why he/she gets whatever grade he/she is awarded, if and when required. A mechanism for the review of grades is incorporated into the evaluation system.

However, before appealing for such review, a student shall first approach the concerned course Instructor and then the concerned DUGC, with the request to do the needful; and only in situations where satisfactory remedial measures have not been taken, the student may then appeal to the Department Academic Appeals Boards (DAAB) before the date specified in Academic Calendar, by paying the prescribed fees.

b. The fee for such an appeal will be decided by the Senate from time to time. If the appeal is upheld by DAAB, then the fee amount will be refunded to the student.

#### 17 AWARD OF DEGREE

#### 17.1 (1) **B.Tech. Degree**

- a) Students shall be declared to have completed the Program of B.Tech. degree and is eligible for the award of degree provided the students have undergone the stipulated Course work of all the semesters under the Scheme of Teaching and Examinations and have earned the prescribed number of credits (160 credits for regular students registered for 4-year degree programs & 120 for lateral entry students).
- b) For the award of a degree, a CGPA≥5.00 at the end of the Program shall be mandatory.
- c) Completion of Additional Mathematics I and II shall be mandatory for the award of degree to lateral entry diploma students.

#### d) Earning of Activity Points:

- i. Every student entering 4-year degree program should earn 100 activity points & every student entering 4-year degree program through Lateral Entry should earn 75 activity points as per the AICTE Activity Point Program for the award of an Engineering degree
- ii. The activities can be spread over the years (duration of the program) at any time during the semester weekends and holidays, as per the interest & convenience of the students from the year of entry to the program.
- iii. The Activity Points earned shall be reflected on the student's eighth-semester Grade Card.
- iv. Activity Points (non-credit) do not affect SGPA/CGPA and shall not be considered for vertical progression.
- v. In case students fail to earn the prescribed activity Points before the commencement of 8th-semester examinations, the eighth-semester Grade Card shall be issued only after earning the required activity Points. Students shall be admitted for the award of a degree only after the release of the Eighth semester Grade Card.

#### 17.2 Honours/ Minors Degree

#### 17.2.1 B.Tech. (Honours) Degree

- i. Students must earn a minimum of 18 additional credits in his/her major program discipline entitles a student to get an 'Honours' credential.
- ii. Students have to pay additional fees for all the courses registered for 'Honours'
- iii. Students with a minimum of 7.5 CGPA and no backlog at the end of the 4<sup>th</sup> semester will qualify for registering for courses under the 'Honours credential.
- iv. Students shall register for 'Honours' courses from the 5th semester onwards.
- v. Students should register for additional courses and plan to take courses that are prescribed under that 'Honours' list as per 'pre-requisite' courses to earn the 'Honours' credential.
- vi. Students who wish to acquire an 'Honours' credential need to carry out 'Honours'

- course registration along with their regular semester course registration.
- vii. He/she accumulates credits by registering for the required courses, and if the requirements for 'Honours' are met within the prescribed minimum time limit of the program, the 'Honours' will be awarded along with the degree.
- viii. Also, the student should meet the following **requirements to become eligible for** the 'Honours award.
  - Minimum CGPA of 7.5 in this major discipline at the end of the 8<sup>th</sup> semester
  - Minimum CGPA of 7.0 in the registered 'Honours' courses
  - ix. In case a student withdraws from the 'Honours' registration in the middle of the program, the 'Honours' courses completed will be converted to 'Audit' courses and indicated accordingly in subsequent Grade Sheets and Consolidated Grade Sheets.
  - x. It must be noted that the 'Honours' award will be mentioned in the Degree Certificate as "Bachelor of Technology in (specialization) with Honours".
- xi. This fact will also be reflected in the Consolidated Grade Sheet under a separate heading 'Honours' with similar details shown for other credited courses and the CGPA for 'Honours' will be indicated at the end of the list of courses under 'Honours'.
- xii. The grades obtained in the courses credited towards the 'Honours' award are not counted and shall not influence the GPA/ CGPA of the 'program' student has registered.

#### 17.2.2 Minor Degree

- i. Students have to earn a min of 18 additional credits from the courses focused on discipline other than his/her major program discipline entitles a student to get a 'Minor' credential.
- ii. Students have to pay additional fees for all the courses registered for 'Minor'.
- iii. Students with a minimum of 5.0 CGPA and no backlog at the end of the 3<sup>rd</sup> semester will only qualify for registering for the course under the 'Minor' credential.
- iv. Students shall register for 'Minor' degree courses from the 4<sup>th</sup> semester onwards.
- v. All Departments will offer 'Minors' in their varied disciplines and will prescribe what set of courses and/or projects is necessary for earning a minor in that discipline.
- vi. Students should register for additional courses and plan to take courses that are prescribed under that 'Minors' list as per 'pre-requisite' courses to earn the 'Minor' credential
- vii. If any of the courses listed under the 'minor' option is a course listed under his/her curriculum as PCC then the student cannot opt for that 'Minor', since all minor courses need to be earned as additional courses to his/her program curriculum and depts decision is final and binding
- viii. Students who wish to acquire a 'Minor' can register for 'Minor' courses along with their regular semester course registration.
- ix. Also, the student should have a minimum **CGPA** of **5.0** in the 'Minor' courses registered to become eligible for the Minor credential. This fact will also be reflected in the Consolidated Grade Sheet under a separate heading 'Minor in (specialization)'.

- x. If the course requirements for a particular 'Minor' are met within the prescribed minimum time limit of the program, the minor will be awarded along with the degree, and it will be mentioned in the **Degree Certificate as "Bachelor of Technology in (Major discipline) with Minor in (specialization)."**
- xi. In case a student withdraws from the 'Minor', the 'Minor' courses completed, will be converted to 'Audit' courses and indicated accordingly in subsequent Grade Sheets and Consolidated Grade Sheets.
- xii. The grades obtained in the courses credited towards the 'Minor' award are not counted and shall not influence the GPA/ CGPA of the program the student has registered for.

#### 17.2.3 Additional norms for Honours/Minors

- Students shall register for additional courses to earn Honours/Minors in consultation with their Class Advisor from the list of courses suggested by the DUGC.
- ii. DUGC may recommend Massive Open Online Courses (MOOCs)/SWAYAM/NPTEL courses to students who wish to register for Honours/Minors after justifying and establishing the equivalence of the curriculum. The decision of DUGC should be communicated to the Dean of Academics and Controller of Examinations for seeking approval.
- iii. A maximum of 40% credits prescribed for Honors/Minors may be earned through MOOCs/SWAYAM/NPTEL
- iv. Students may choose to take up additional course work, from the MOOCs courses list suggested by various departments (which can be from SWAYAM/NPTEL) with proctored examinations as approved by the University and complete the same before the last working day of the VIII semester with a final score (online assignments: 25 % + Proctored examination: 75 %) leading to the following certificates: Completed the course (40-59)− ELITE (60 to 75 %) or ELITE + SILVER (76 to 89 %) or ELITE + GOLD (≥90 %)
- v. In case, in MOOCs (ex: Coursera), there is no proctored examination, the University will conduct a SEE as deemed to be fit for the award of Credits
- vi. The Credit equivalence for online courses shall be as follows
  - 4 weeks of online course duration 1 credit (approx. 13-14 hours)
  - 8 weeks of online course duration 2 credits (approx. 26-28 hours) and
  - 12 weeks of online course duration 3 credits (approx. 39-42 Hours)

#### 17.3 Noncompliance

#### 17.3.1 Noncompliance of CGPA $\geq$ 5.00 at the end of the Program

- a) Students, who have completed all the courses of the Program but do not have a  $CGPA \ge 5.00$  at the end of the Program, shall not be eligible for the award of the degree.
- b) In the cases of 17.3 (1), a student shall be permitted to appear again for SEE in course/s (other than Internship, Technical seminar, Project (Mini and Major), and Laboratories) of any Semester/s without the rejection of CIE marks for any number of times, subject to the provision of a maximum duration of the Program to make up the CGPA equal to or greater than 5.00 for the award of the Degree.
- c) Students shall obtain written permission from the Controller of Examinations to

reappear in SEE to make up the CGPA equal to or greater than 5.00.

- d) In case, the students earn improved grade/s in all the reappeared course/s, the CGPA shall be calculated considering the improved grade/s. If it is  $\geq$ 5.00, the students shall become eligible for the award of the degree. If CGPA <5.00, the students shall follow the procedure laid in 17.3.1 (b).
- e) In case, the students earn improved grade/s in some course/s and the same or lesser than the previously earned pass grade/s in the other reappeared course/s, the CGPA shall be calculated considering the improved grade/s and the pass grades earned before the reappearance. If it is ≥5.00, the students shall become eligible for the award of the degree. If CGPA<5.00, the students shall follow the procedure laid in 17.3.1 (b).
- f) In case, the students earn improved grade/s in some courses and fail in the other reappeared course/s, the CGPA shall be calculated by considering the improved grade/s and the previously earned pass grade/s of the reappeared course/s in which the students have failed. If it is≥5.00, the students shall become eligible for the award of the degree. If CGPA <5.00, the students shall follow the procedure laid in 17.3.1 (b).
- g) In case, the students fail (i.e., earns an F grade) in all the reappeared course/s, pass grade/s of the course/s earned by the students before reappearance shall be retained. In such cases, the students shall follow the procedure laid in 17.3.1 (b).

#### 17.3.2 Noncompliance with Project/ Mini project

The project/mini project shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take up/complete the miniproject shall be declared to fail in that course and shall have to complete the same during subsequent University examinations after satisfying the Mini-project requirements.

#### 17.3.3 Noncompliance of Internship

All the students of B. Tech shall have to undergo mandatory Internship-I and Internship-II for a total of 10 weeks to earn a total of 10 credits in parts during the vacations at the end of the 1/2/3 academic year. The evaluation of Internship shall be during IV and VIII semesters. The internship shall be considered mandatory for the award of a degree. Those, who do not take up/complete the internship shall be declared to fail in that Course and shall have to complete the same during subsequent University examinations after satisfying the internship requirements. The maximum duration for a student for complying with the Degree requirements is 16 – semesters from the date of first registration for his/ her first semester (8 years from the date of admission to the first year, (12 semesters / 6 years from the date of admission for lateral entry student)).

#### 18 GRADUATION REQUIREMENTS AND CONVOCATION

- **18.1** A student shall be declared to be eligible for the award of the degree if he/she has
  - a) Fulfilled "Award of Degree" Requirements
  - b) No Dues to the College, Departments, Hostels, Library, Central Computer Centre and any other centers
  - c) No disciplinary action is pending against him/her.

- **18.2** The award of the degree must be recommended by the Governing council
- **18.3** Convocation: Degree will be awarded to the students who have graduated during the preceding academic year. Students are required to apply for the Convocation along with the prescribed fees, after having satisfactorily completed all the degree requirements (refer to "Award of Degree") within the specified date to arrange for the award of the degree during convocation.

### 19 AWARD OF PRIZES, MEDALS, CLASS & RANKS

- 19.1 For the award of Prizes and Medals, the conditions stipulated by the Donor may be considered as per the statutes framed by the University for such awards. Sometimes, it would be necessary to provide equivalence of these averages, viz., SGPA and CGPA with the percentages and/or Class awarded as in the conventional system of declaring the results of University examinations. This can be done by prescribing certain specific thresholds in these averages for Distinction, First Class, and Second Class as described in Section 15.
- 19.2 An attempt means the appearance/registration of a candidate for an examination in one or more courses either in part or failing a particular examination.
  - **19.2.1** A candidate who fails/remains absent (after submitting exam application) in the main examination and passes one or more subjects/courses or all subjects/courses in the supplementary/Make-up examination such candidates shall be considered as taken more than an attempt.
- 19.3 Merit Certificates and University Medals/ will be awarded based on overall CGPA, governed by the specific selection criteria that may be formulated by the University for such Medals / Awards
  - **19.3.1** Only those candidates who have completed the Program and fulfilled all the requirements in the minimum number of years prescribed (i.e., 3 years for Diploma lateral entry students or 4 years for students who joined after the 12<sup>th</sup> standard) and who have passed each semester in the **first attempt** are eligible for the award of Merit Certificates and /or University Medals.
  - **19.3.2** Candidates with W, N, I, X & F grades and who passes the courses in the subsequent/supplementary/make up examinations are not eligible for the award of Gold Medal or Merit Certificate.

#### 20 CONDUCT AND DISCIPLINE

- **20.1** Students shall conduct themselves within and outside the premises of the College in a manner befitting the students of an Institution of National Importance.
- 20.2 As per the order of the Honorable Supreme Court of India, ragging in any form is considered a criminal offense and is banned. Any form of ragging will be severely dealt with.
- **20.3** The following acts of omission/ or commission shall constitute a gross violation of the Code of Conduct and are liable to invoke disciplinary measures:
  - i. Ragging.
  - ii. Lack of courtesy and decorum; indecent behavior anywhere within or outside the campus.
  - iii. Willful damage or stealthy removal of any property/belongings of the College/Hostel or fellow students/citizens.
  - iv. Possession, consumption, or distribution of alcoholic drinks or any kind of

hallucinogenic drugs.

- v. Mutilation or unauthorized possession of Library books.
- vi. Noisy and unseemly behavior, disturbing studies of fellow students.
- vii. Hacking in computer systems (such as entering into another Person's area without prior permission, manipulation and/or Damage of computer hardware and software, or any other Cybercrime, etc.).
- viii. Plagiarism of any nature.
  - ix. Any other act of gross indiscipline as decided by the Senate from time to time.
  - x. Use of Mobile in the college Academic area.
  - xi. Smoking in College Campus and supari chewing.
- xii. Unauthorized fundraising and promoting sales.
- xiii. Commensurate with the gravity of the offense the punishment may be: reprimand, expulsion from the hostel, debarring from an examination, disallowing the use of certain facilities of the College, rustication for a specified period or even outright expulsion from the College, or even handing over the case to appropriate law enforcement authorities or the judiciary, as required by the circumstances.
- **20.4** For an offense committed in (i) a hostel (ii) a department or a classroom and (iii) elsewhere, the Chief Warden, the Head of the Department, and the Dean (Academics), respectively, shall have the authority to reprimand or impose fine.
- **20.5** All cases involving punishment other than reprimand shall be reported to the principal.
- **20.6** Cases of adoption of unfair means and/or any malpractice in an examination shall be reported to the Controller of Examinations for taking appropriate action.
- **20.7 Note:** Students are required to be inside the examination hall 20 minutes before the commencement of the examination. This is applicable for all examinations (Semester end/Supplementary/makeup) henceforth. Students will not be allowed inside the examination hall after the commencement, under any circumstances.

\*\*\*\*\*

#### APPENDIX - A

#### Definitions, terminology, and abbreviations

#### 1. Nitte DU / University

a. Refers to Nitte (Deemed to be University)

#### 2. BoM

a. Refers to Board of Management of Nitte (Deemed to be University)

#### 3. BoS

a. Refers to the Board of Studies in Civil Engineering

#### 4. Institute/Institution

a. Refers to NMAM Institute of Technology, Nitte

#### 5. Program

a. A range of learning experiences over a specified period, leading to the award of a degree/diploma/certificate. A program is completed when the courses that make up the program are completed, and other requirements as specified in the program regulations are met.

#### 6. Course

a. A unit of learning that typically lasts one semester, led by one or more teachers, for a fixed roster of students. Often referred to as a "subject". A course has identified course outcomes, modules/units of study, specified teaching-learning methods, and assessment schemes. A course may be designed to include lectures, tutorials, practical, laboratory work fieldwork, project work, internship experiences, seminars, self-study components, online learning modules, etc. in any combination.

#### 7. Semester

- a. An academic session, usually of 16 weeks duration, with a minimum of 90 working days during which coursework and assessments are to be completed. Typically, two semesters make up an academic year, with the first of these referred to as the Odd Semester and the second as the Even Semester.
- b. An additional short semester (usually 8 weeks) may be offered between an even semester and subsequent odd semester (in the interval between two academic years) and is termed a summer semester. The summer semester is offered to enable students to register for:
  - i. Fast-tracked courses required for clearing backlog courses
  - ii. Fast-tracked courses for earning additional credit / completing non-credit mandatory requirement
  - iii. Value added courses
  - iv. The courses offered in summer semesters are bound by the same regulations as that of regular semesters, except that they are run at an accelerated pace to provide the required contact hours and conduct assessments within the 8 weeks.

#### 8. Credit

a. A unit by which the course work is measured. It determines the number of hours of formal learning (contact hours) required per week. Credits are calculated based on the concept of "notional learning time". Notional learning time is the number of hours that a learner is expected to spend, on average, to achieve the specified learning outcomes of the course. This may comprise a variable combination of scheduled learning activities, (lectures, seminars, labs, etc.) and self-directed learning time (reading required before classes, working on assignments, examination preparation, and completion of assessments).

### 9. Credit equivalence of notional learning time for different types of activities

a. The credit values assigned to various teaching-learning activities are as follows:

Type of teaching- learning	Nature of activity	No. of contact hours per week equivalent to one credit	The total number of contact hours over a 16-week semester is equivalent to one credit
Lectures / Seminars / synchronous virtual classes / synchronous webinars	Scheduled instruction	1:1	16
Tutorials	Scheduled instruction	2:1	32
Supervised Demonstrations /Laboratory sessions / Studio / Workshops / Workplace simulation / Skill Practice Sessions	Scheduled instruction	2:1	32
Supervised Field visits/community visits/Internships	Scheduled instruction	3:1	48
Scheduled self- directed study (individual or group)	Scheduled instruction	2:1	32
Asynchronous E- Learning modules (structured self- directed study	Independent learning	2:1	32
Student Seminar	Independent /small group learning	2:1	32
Project work/dissertation	Independent /small group learning	3:1	48
Internship for credit	Industry placement/ Research Internship	3:1	48

#### 10. Choice-based credit system (CBCS)

A program structure for higher education requires students to earn a minimum of credits by completing various types of courses, including electives, which facilitate a student to have some freedom in selecting his/her own choices, within as well as across disciplines.

#### 11. Course Registration

Refers to formal registration of the Courses in the study every semester (Credits and Audit) by every student under the supervision of a faculty advisor. The institution will maintain records of the same and communicate them to the University.

#### 12. Learning outcomes

- a. Program Outcomes (PO) Statements defining the skills, knowledge, and attitude that graduates of a program will be able to demonstrate upon completing the program
- b. Course Outcomes (CO) Statements defining the skills, knowledge, and attitude that students will be able to demonstrate upon completing the course. COs are mapped to the POs such that attaining the course outcomes leads to the attainment of program outcomes.
- c. Attainment of POs-COs is mapped to the POs such that attaining the course outcomes leads to the attainment of program outcomes.

#### 13. Evaluation

For all courses, the evaluation will be based on both formative assessment (Continuous Internal Evaluation, CIE) and summative assessment (Semester End Evaluation, SEE). Weightage for CIE and SEE will be 50% each

#### 13.1 Continuous Internal Evaluation (CIE)

Refers to the periodic and continuous *formative assessment* of students' performance during the semester by the teacher(s) of the course to provide timely feedback to students and for guiding "course corrections" by the teachers. The assessment methods may include tests, quizzes, assignments, project evaluations, portfolio evaluations, seminar assessments, etc. CIE will have a weightage of 50% in the determination of the final grading of the course.

#### **13.2** Semester End Evaluation (SEE)

Refers to a *summative assessment* that covers the entire course syllabus, conducted by the University, at the end of the semester. Appropriate assessment methods aligned with the learning domain and teaching-learning methods are to be used. CIE will have a weightage of 50% in the determination of the final grading of the course.

## 14. Grading

Course Grade refers to a qualitative measure of performance of a student in each course, based on the percentage of marks secured in Continuous Internal Evaluation (CIE) and Semester End Evaluation (SEE). A Letter grade is awarded for each course.

#### 15. Semester Grade Point Average (SGPA)

Refers to the measure of a student's academic performance in a semester. It is calculated based on the credits and the grades obtained in the courses offered in the semester.

#### 16. Cumulative Grade Point Average (CGPA)

Refers to the measure of the cumulative performance of a student in all the previous semesters and is computed from the 2nd semester onwards. It is calculated based on the credits and the grades obtained in all the courses taken.

#### 17. Academic Bank of Credits (ABC)

The Academic Bank of Credits is a national-level facility for "credit transfer". It is provided by the Ministry of Education, Govt. of India, to promote the flexibility of the curriculum framework and interdisciplinary/multidisciplinary academic mobility of students across the Higher Education Institutions in the country. The banking and redemption of credits through ABC will be governed by the University's guidelines.

# **APPENDIX-B**

### **Evaluation Guidelines**

# CIE and SEE details for various types of courses

1. Theory: PCC/IPCC/PEC/OEC

1.1. Scheme of examinations: CIE+SEE =50+50=100 marks

1.2. Continuous internal evaluation (CIE):

# **1.2.1.** CIE (PCC/PEC/OEC)

Type of Questions	Questions to be set (Can have sub- questions a and b)	Questions to Be answered	Marks per question	Total marks		
Mid Sem Exam-1						
40%	of the total syllabus (	Unit-1) (15 Teac	ching hours)			
Descriptive Part-1	2	1	10	10		
Descriptive Part-2	2	1	10	10		
	Mid Sem Exam-2					
40%	of the total syllabus (	Unit-2) (15 Teac	ching hours)			
Descriptive Part-1	2	1	10	10		
Descriptive Part-1	2	1	10	10		
TASKS						
TASK  The task comprises 5 class tests/quizzes/assignments conducted for each unit for a max mark of 10. All tests/quizzes/Assignments are compulsory				10		
Maximum Marks		·		50		

# 1.2.2 CIE (IPCC/PBL)

Type of Questions	Questions to be set (Can have sub- questions a and b)	Questions to be answered	Marks per question	Total marks				
	Mid Sem E	xam-1						
40%	of the total syllabus (Uni	t-1) (15 Teac	ching hours)					
Descriptive Part-1	Descriptive Part-1         2         1         10         10							
Descriptive Part-2	2	1	10	10				
	Mid Sem Exam-2							
40%	40% of the total syllabus (Unit-2) (15 Teaching hours)							
Descriptive Part-1	2	1	10	10				
Descriptive Part-1	2	1	10	10				
Task	The task comprises 5 claconducted for each unit tests/quizzes/Assignments	for a max m	ark of 10. All	10

5	Drafting		50	20	50	20
6	Mini Project		100	40		
7	Inter/Intra Institution (2 weeks)	onal Internship	100	40		
0	Industrial/Govt./ NGO/MSME/ Rural Internship/ Innovation / Entrepreneurship (In single or two stretches =Total of 8 weeks)		100	40	100	40
9	Research Internship/ Advanced Industry Internship/Project work		100	40	100	40
10	Seminar		100	40		

All university examinations (SEE) shall be conducted for a maximum of 100 marks. For assigning the letter grade the university examination marks secured by a student, except in the case of serial

no. 06, 07, and 10 shall be reduced to 50 marks and added to CIE marks. If the total marks result in a fraction during reduction, it shall be rounded off to the nearest higher value.

#### 2 Laboratory/Practical Course

**2.1 Split-up of Marks for evaluation of Practical** for 50 CIE marks and 50 SEE marks.

#### 2.2 Split-up of Marks for evaluation of Laboratory work:

- **2.2.1** Laboratory in-charge faculty will follow rubrics given in the Tables below for an evaluation of laboratory courses
- **2.2.2** In the case of Practical, the IA marks shall be based on laboratory observation, records, viva, and at least one practical test.
- **2.2.3** Continuous Evaluation in every lab session will be done using the format mentioned in the Table to evaluate PO9 (Individual and teamwork) and PO10 (Communication).

# **2.2.4** Rubrics used for continuous Evaluation of **laboratory courses involving experiments** with hardware

Split-up: 60% (30 Marks) of Maximum CIE	
	Split-up: 40% (20 Marks) of Maximum CIE marks (50). One test of 20 Marks
conduction with an observation book and record write-up (30 marks per experiment). The final marks for conduction and record are the average	In the test, conduction of the experiment and acceptable result with viva-voce will carry a weightage of 60% per experiment, with the rest 40% for procedural knowledge and regularity of the student.

Rubrics	Marks			Marks	
per experiment	Distribution	Remarks	Rubrics	distribution	Remarks
Circuit	02		Write-up	04	
Design	02	Evaluation of	Conduction	10	
Procedure	02	Record write-up			
Conduction	06	to include			
Viva	06	weightage for			
Record write-up	12	submission on time, neatness,	Results	06	
Total Marks	30	etc.	Total Marks	20	

# **2.2.5** Split-up of Marks used for continuous Evaluation of laboratory involving experiments with software

Rubrics for Split up of Marks	Methodology / Process Steps per Experiment	Marks
#R1	Observation, Write up of Procedure / Algorithm/ Program execution, and Conduction of experiment	12
#R2	Viva – Voce	06
#R3	Record writing	12
	Total Marks for each experiment	30
	Internal Test: Lab Internal Assessment	
	(i) Write-up of Procedure/Program/Algorithm	04
#R4	(ii) Conduction/Execution	10
	(iii) Viva-Voce	06
	Total Marks	20

#### 3. Internship and Evaluation

#### 3.1 Introduction

The rise in global competition has prompted organizations to devise strategies to have a talented and innovative workforce to gain a competitive edge. Developing an internship policy is an impactful strategy for creating a future talent pool for the industry. The internship (a form of experiential learning) program not only helps fresh pass—outs in gaining professional know-how but also benefits corporate sectors. The internship also enhances the employability skills of the student passing out from Technical Institutions.

The following list provides a brief illustrative overview of the knowledge, skills, work habits, and character traits commonly associated with 21<sup>st</sup>-century skills and to be acquired by graduates:

- Critical thinking, problem solving, reasoning, analysis, interpretation, and synthesizing information.
- Scientific literacy and reasoning, the scientific method.
- Research skills and practices, interrogative questioning.
- Creativity, artistry, curiosity, imagination, innovation, and personal expression.
- Information and communication technology (ICT) literacy, media and internet literacy, data interpretation and analysis, and computer programing.
- Oral and written communication, public speaking and presenting, listening.
- Economic and financial literacy, entrepreneurial skills.
- Global awareness, multicultural literacy, humanitarianism.
- Environmental and conservation literacy, ecosystems understanding.
- Civic, ethical, and social-justice literacy.

- Leadership, teamwork, collaboration, cooperation, and facility in using virtual workspaces.
- Perseverance, self-direction, planning, self-discipline, adaptability, initiative.
- Health and wellness literacy, including nutrition, diet, exercise, and public health and safety.

The internship experience will augment the outcome-based learning process and inculcate various attributes mentioned above in a student in line with the graduate attributes defined by the NBA as well as NEP 2020

Following are the intended objectives of internship training.

- (i) Expose Technical students to the industrial environment, which cannot be simulated in the classroom, and hence create competent professionals in the industry.
- (ii) Provide possible opportunities to learn, understand and sharpen the real-time technical/managerial skills required at the job.
- (iii) Expose to the current technological developments relevant to the subject area of training.
- (iv) Use the experience gained from the industrial internship in discussions held in the classrooms.
- (v) Create conditions conducive to the quest for knowledge and its applicability on the job.
- (vi) Learn to apply technical knowledge in real industrial situations.
- (vii) Gain experience in writing reports on technical works/projects.
- (viii) Expose students to the engineer's responsibilities and ethics.
- (ix) Familiarize with various materials, processes, products, and their applications along with relevant aspects of quality control and safety measures.
- (x) Promote academic, career, and/or personal development.
- (xi) Expose the students to future employers.
- (xii) Make students available to the industry for employment.
- (xiii) Understand the psychology of the workers and their habits, attitudes, and approach to problem-solving.
- (xiv) Understand the social, economic, and administrative considerations that influence the working environment of industrial organizations.
- **3.2** Academic credit framework for the internship and project work undergone as part of the B.Tech. program.
  - A minimum of 20 credits of Internship/ Entrepreneurial activities / Project work/ Seminar and Inter/ Intra Institutional Training may be counted towards B. Tech. degree program
  - Here, 1 credit is equivalent to a minimum of 40-45 hours of work. Therefore, a full-time intern is expected to spend 40 45 hours per week on Internship, Training, Project work, Seminar activities, etc. This will result in about 800 to 900 hours of total internship and project duration for the B. Tech program.
  - To derive the benefits of an internship, it is introduced in two/ three stages of the B.Tech. program.
  - Internships may be full-time or part-time; they are full-time during the summer vacation and part-time during the academic session. The curriculum is flexible to adjust internship duration. Therefore, opportunities must be provided for experiences that cannot be

anticipated when planning the course.

• The departments have the flexibility to schedule internships, Project work, Seminars, etc. according to the availability of the opportunities. However, the suggested minimum requirement regarding Internship duration and credits are as given in Table -B1.

Table-B1 Suggested Credit Framework for Internship and Project work.

Sl. No.	Title	Schedule	Duration	Activities	Credits
1	Internship-I	Ongoing First-year academic session/ Summer vacation after 2nd Semester/ vacation during 3 <sup>rd</sup> semester (for lateral entry students	02 weeks	Inter/ Intra Institutional Activities (Evaluation in 4 <sup>th</sup> semester)	02
2	Internship- II	a) Summer vacation after 4th Semester		Industrial/Govt./ NGO/ MSME/ Rural Internship/ Innovation / Entrepreneurship/ social internship	
		b) Summer vacation after 6th Semester	04-06 weeks	Industrial/Govt./ NGO/ MSME/ Rural Internship/ Innovation / Entrepreneurship	
		c) Total of a) and b) at the beginning of the 8th semester	08 weeks	Evaluation in 8 <sup>th</sup> Semester	08
3	Project work	6 <sup>th</sup> Semester	6 hours/week	Mini -Project	02
		8th Semester	16 weeks	Extended Industry Internship /Research Internship/ Project work	10
				Report preparation and writing	
				Seminar	01
		Total Cre	edits		23

Table-1 states that during the ongoing/ summer vacations after the 2<sup>nd</sup> Semester, students are required to be involved in Inter/ Intra Institutional Activities viz; Training with higher Institutions; Soft skill training organized by Training and Placement Cell of the respective institutions; contribution at incubation/ innovation /entrepreneurship cell of the institute; participation in conferences/ workshops/ competitions, etc.; Learning at Departmental Lab/ Tinkering Lab/ Institutional workshop; Working for consultancy/ research project within the institutes and Participation in all the activities of Institute's Innovation Council for eg: IPR workshop/Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos, etc.

During the summer vacation after the  $4^{th}$  /  $6^{th}$  semester, students are ready for industrial experience. Therefore, they may choose to undergo Internship / Innovation / Entrepreneurship related activities. Students may choose either to work on innovation or entrepreneurial activities resulting in start-up

or undergo internship with industry/NGO/ Government organizations/ Micro/ Small/ Medium enterprises to make themselves ready for the industry.

#### 3.3 Internship Supervision

- i) The internship shall be carried out under the supervision of a faculty mentor. The faculty mentor/guide should,
- ii) Serve as a teacher, mentor, trainer, critic, leader, and boss.
- iii) Provide sufficient time to guide the interns. (Interns are students or a trainee who does a job to gain work experience)
- iv) Play a vital role, along with the Training and Placement Officer, in providing internship opportunities for the students.
- v) Exhibit qualities such as leadership, strong communication skills, and patience.
- vi) Provide a letter of recommendation in due consultation with students and the industrial organization (if possible) where the internship is intended to be carried out, endorsed by the authority (Principal/Institution Internship Coordinator).
- 3.3.1 Each faculty mentor shall supervise the students/Student batches allotted to them. Often, the supervision may be by an external expert. In such cases, the faculty mentor shall jointly guide the student/s without causing miscommunications/embarrassment to either side.
- 3.3.2 Depending on the activity taken up by the students, the internship shall be carried out individually or in batches having not more than three students.
- 3.3.3 Faculty Mentor, along with the external expert, shall scrupulously evaluate the work of an individual student or students of a batch and maintain the relevant documents.
- 3.3.4 For allotment of CIE marks, the institutions shall prepare the rubrics for each activity offered by the institution as given in Table B2. The marks shall be allotted by the Internship committee designated by HOD in consultation with the mentors.
- 3.3.5 For all activities conducted by the institution, the attendance of the students shall be maintained by the faculty and maintained in their respective departments.

#### 3.4 Internship-I (Activity based Internship)

While intra-activities are within the institution, inter-activities shall be between the concerned institution and neighboring institutions. Intra and Inter activities are the activities that are the impetus to learning techniques. It adds to the comprehensive growth of the mind and associated activities.

As the students are on the verge of learning technical aspects and have a limited period of internship, it is preferable to expose students to polygonal activities instead of one type of activity. Therefore, activities completed by the students shall not be one type of activity but can be few within the period of the internship. In this regard, Intra and Inter-Institutional activities shall be completed under the supervision of a faculty on a self-learning basis.

The faculty have to kindle the latent abilities of the students, encourage, guide, supervise and shape them to achieve the desired result. Therefore, a learning agenda in the form of specific learning objectives and outcomes shall be prepared before the start of the internship.

Whatever the activity/activities that are/are done under Intra and Inter-Institutional activities, should ignite the inquisitiveness to learn, enhance the knowledge, thinking ability and imagination, planning, application of mind, execution ability, innovation attitude, listening and understanding, vocabulary, personal expression, public speaking, written communication, oral presentation of the

subject matter, acquire leadership qualities and teamwork requirements, responsiveness, ethics, etc.

#### 3.4.1 List of proposed activities

- a. Activities concerned with the works of Indian scholars like Charaka and Susruta, Aryabhata, Bhaskaracharya, Chanakya, Madhava, Patanjali, Panini, and Thiruvalluvar, among numerous others
- b. Activities such as training with higher Institutions or Soft skill training
- c. Contribution at incubation/innovation/entrepreneurship cell of the institute.
- d. Learning at Departmental Lab/Tinkering Lab/ Institutional workshop.
- e. Working for consultancy/ research projects within the institute.
- f. Learning MS Word, Excel, Microsoft equations, MS drawing tools, MS Powerpoint, etc.
- g. Coding.
- h. Mini projects using commercially available assembled electronic products.
- i. Debates, quizzes, and group discussions: On technical topics already studied (both in Kannada and English).
- j. Essay competitions: Both in Kannada and English on technical topics already studied.
- k. Survey and study of published literature on the assigned topic: Technical paper survey, Preparation of synopsis. Exposure to technical paper publications.
- 1. Photography.
- m. Short film production: Contemporary aspects, technical aspects, etc.
- n. Internship in Disaster Management.
- o. Solar energy connected activities that help the common man.
- p. Working with Smart City Administration.
- q. Hackathon (it is a design sprint-like event in which computer programs and others involved in software development, including graphic designers, interface designers, project managers, and others, often including domain experts collaborate intensively on software projects).
- r. Industrial Safety, Fire Safety, Electrical Safety, Chemical Process Safety, Food Safety, etc.
- s. Internship and project work in Indian Knowledge System related Areas/Topics.
- t. Industrial visits to Small Scale Industries/ Factories/ Cottage Industries/substation visits etc., and submission of the report.

#### 3.5 Documents to be submitted by Students for Internship Evaluation

#### 3.5.1 Student's Diary

The main purpose of writing a daily diary is to cultivate the habit of documenting and to encourage the students to search for details. It develops the student's thought process and reasoning abilities. The students shall record in the daily training diary the day-to-day account of the observations, impressions, information gathered, suggestions given, if any, and activities carried out. It should contain sketches and drawings related to the observations made by the students. The daily training diary should be signed after every day or at least twice a week by the faculty/ in charge of the section (external expert) where the student has been working.

Student's Diary should be submitted by the students along with attendance records. It shall be evaluated based on the following criteria:

- i) Regularity in the maintenance of the diary.
- ii) Adequacy and quality of information recorded.

- iii) Drawings, sketches, and data were recorded.
- iv) Thought processes and recording techniques were used.
- v) Organization of the information

#### 3.5.2 Internship report

After completion of the Internship, the student shall prepare, with a daily diary as a reference, a comprehensive report in consultation with the mentor/s to indicate what he/she has observed and learned in the training period along with the internship outcomes. The training report should be signed by the mentor. The Internship report shall be evaluated based on the following criteria and/or other relevant criteria about the activity completed.

- i) Originality.
- ii) Adequacy and purposeful write-up.
- iii) Organization, format, drawings, sketches, style, language, etc.
- iv) Practical applications, relationships with basic theory, and concepts taught in the appropriate course.
- v) Variety and relevance of learning experience.

### Procedure for the Evaluation of Internship-I

- a) Students should submit the reports immediately on completion of the Internship to the respective mentors
- b) The Examination of the internship will be carried out by the mentor
- c) The Internship-I shall be slated for 100 marks CIE only and will not have SEE.
- **d**) Internship-I marks are based on CIE marks (25 marks for the first presentation, 25 marks for the second presentation, and 50 marks for the report and final presentation).
- e) A Viva-Voce examination conducted during the I/II/III Semesters (Presentation followed by question-answer session) and the prescribed credit shall be included in the IV semester grade card.

#### 3.5.3 Assessment Rubrics for evaluation of Internship-I (Intra and Inter-Institutional Activities)

S	Table – B2 Internship-I Assessment Rubrics Scheduled during the first year (Prescribed Period 02 weeks and Prescribed credits:  02)						
Sl No	Sub Activity Head	Performance/ Appraisal	Assessment Rubrics (Allotted marks decide the letter	Proposed Document as Evidence	Evaluated by		
1	Inter/ Intra	Excellent	80 to 100				
	Institutional	Good	60 to 79	(i) Student's			
	workshop/ Hanning.	Satisfactory 40 to 59	Diary and (ii) Internship				
		Unsatisfactory and fail	< 39	Report along			
2	Working for	Excellent	80 to 100	with the	Institute		
	consultancy/	Good	60 to 79	certificate	Faculty		
	Research project.	Satisfactory	40 to 59	issued from	(mentor)		
		Unsatisfactory and fail	< 39	the relevant	together		
3	Festival (Technical /	Excellent	80 to 100	authorized	with		

4	Business / Others) Events.  Contribution in Incubation/ Innovation/ Entrepreneurship Cell.	Good Satisfactory Unsatisfactory and fail Excellent Good Satisfactory Unsatisfactory and fail	60 to 79 40 to 59 < 39 80 to 100 60 to 79 40 to 59 < 39	Authority	External Expert, if any.
5	Learning at Departmental Lab/Tinkering Lab/Institutional workshop.	Excellent Good Satisfactory Unsatisfactory and fail	80 to 100 60 to 79 40 to 59 < 39		
6	Other than the above five activities	Excellent Good Satisfactory Unsatisfactory and fail	80 to 100 60 to 79 40 to 59 < 39		

**Note:** The total CIE marks shall be the sum of marks allotted to completed activities by the student.

# **3.6 Internship-II: (Societal internship and Research/Industry Internship) (08 weeks)** [Scheduled during the intervening period of IV & V semester and VI & VII semester]

During the intervening period of the IV & V semesters and VI & VII semesters, students shall be ready for industrial experience. Therefore, they shall choose to undergo an Internship involving Innovation / Entrepreneurship/short-term (about 2 weeks) societal-related activities. Students may choose to work on innovation or entrepreneurial activities, or both resulting in start-up or undergo internship with industry/NGO/ Government organizations/ Micro/ Small/ Medium enterprises to make themselves ready for the industry.

#### 3.6.1 Innovation

Innovation refers to a new or improved product or process or a combination thereof that differs marginally or significantly from the unit's previous product. An innovation center is a place where students are encouraged to implement the innovative ideas formed through imagination, brainstorming sessions, design thinking, and associated activities to bring them to reality. It is a place, where creative minds are shaped.

#### 3.6.2 Entrepreneurship

Entrepreneurship refers to setting up a new business or business and taking on financial risks in the hope of profit. It involves investment to undertake production along with arranging inputs like land, labour, material, and capital, introducing new techniques and products, identifying new sources for the enterprise, etc.

#### 3.6.3 Incubation Center

An organized unit designed for innovation as well as to accelerate the growth and success of new entrepreneurial companies through mentorship and an array of business support resources and services that could include physical space, capital, coaching, common services, and networking connections.

#### 3.6.4 Startup

An entity that develops a business model based on either product innovation or service innovation and makes it scalable, replicable, and self-reliant.

An entity shall be considered a Startup

- 1) Up to ten years from the date of incorporation/registration, if it is incorporated as a private limited company (as defined in the Companies Act, 2013) or registered as a partnership firm (registered under section 59 of the Partnership Act, 1932) or a limited liability partnership (under the Limited Liability Partnership Act, 2008) in India.
- ii) Turnover of the entity for any of the financial years since incorporation/ registration has not exceeded one hundred crore rupees.
- iii) The entity is working towards innovation, development, or improvement of products or processes, or services, or if it is a scalable business model with a high potential for employment generation or wealth creation.
- iv) Provided that an entity formed by splitting up or reconstruction of an existing business shall not be considered a Startup.

#### 3.6.5 Societal (Social) related activities

Short-term internships (about 2 weeks) in villages, slums, or urban areas can be under social internship. The internship will be more fruitful if students work in teams. The teams can select one or more fields to do their best in the field of agriculture, watershed management, wastelands development, non-conventional energy, low-cost housing, sanitation, nutrition and personal hygiene, schemes for skill development, income generation, blood bank, government schemes such as

- (Swachch Bharat: Swachh Bharat Mission, Swachh Bharat Abhiyan, or Clean India Mission is a country-wide campaign to eliminate open defecation and improve solid waste management.
- ii) Accessible India: Accessible India Campaign or Sugamya Bharat Abhiyan is a program to serve the differently able community of the country.
- iii) Digital India: A campaign to ensure the Government's services are made available to citizens electronically by improved online infrastructure and by increasing Internet connectivity or making the country digitally empowered in the field of technology.
- iv) Beti Bachao and Beti Padhao: A campaign of the Government of India that aims to generate awareness and improve the efficiency of welfare services intended for girls in India.
- v) Environment and Energy Conservation and Education, legal aid, consumer protection, and allied field including Indian Red Cross Society, National Cadet Corps, Bharat Scouts, and Guides.

Societal activities are one of the NBA graduate attributes that are part of PO6 and PO7, which are reproduced below.

- vi) PO-6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- vii) PO-7: Environment and Sustainability: Understand the impact of the professional engineering solution in societal and environmental contexts and demonstrate the knowledge of and need for sustainable development. The long-term goal under Societal (social work) related activities, particularly in a rural area, results in a rural internship. In urban areas, the student may adopt slum/ economically weaker section areas for short duration social internship to uplift the living conditions.

Given the above, internship coordinators should encourage students to take up a societal internship as far as possible.

#### 3.6.6 Places for Innovation/Entrepreneurial Activities

Students shall carry out Innovation or Entrepreneurial activities or both at the Incubation Center and Entrepreneurship Cell of the parent institution or elsewhere such as ATAL Incubation Centers [A flagship of Atal Innovation Mission (AIM), NITI Aayog for promoting the culture of innovation and entrepreneurship in India], institutes of national importance, public sector units, IT companies, government organizations, and non-governmental organizations, industries including MSME, etc.

• Institutes should deter students to opt for internships at places established for commercial benefits.

#### 3.6.7 Industrial Internships

The gap between the theoretical knowledge obtained in the classrooms and the practical skills required in the actual workplace scenarios is fast growing. This has put forth varied challenges to graduating students when it comes to job placements. As institutes cannot have a relevant facility to expose students to a real-time industrial environment, an industrial internship is an appropriate solution.

The main objective of the industry internship is to ensure that the intern is exposed to a real job world environment and gains practical experience. Often, it may be a practical exposure to the theory that has been learned during the academic period. The industry internship helps students understand analytical concepts and tools, hone their skills in real-life situations, and build confidence in applying the skills learned.

#### 3.6.7.1 Industry Internship Benefits

- i) Have ample opportunities to attend seminars, symposiums, workshops, etc. This in turn provides an opportunity to establish rapports with professionals and pioneers in their respective fields for further growth.
- ii) Have wide scope to publish paper/s in journals.
- iii) Good recommendation letter/s that increase the prospectus for further internships, higher studies, and placements.
- iv) Helps to acquire team spirit, motivated acts, techniques to resolve conflicts, etc.
- v) Helps to develop a lot of leadership skills.
- vi) Increases the prospect of placement in the same concern, provided the intern has exhibited a clear understanding of basics and completed the internship.
- vii) Fosters to substantiate the issues with facts and figures.

  For AICTE Internship opportunities refer to <a href="https://internship.aicte-india.org/">https://internship.aicte-india.org/</a>

# 3.6.8 Assessment Rubrics for Innovation / entrepreneurship/ Societal Internship Activities

Once the internship begins, the students are required to maintain a diary/journal and submit a report regularly to the guide. These reports should summarize the activities in which the student was involved during the previous week's period. At the end of the internship, each student is required to submit a hard copy of the consolidated diary/journal and report for evaluation. The report should indicate the learning and achievements of the internship.

Table – B3 Innovation/entrepreneurship/ Societal Internship Activities and Assessment Rubrics

Scheduled during the intervening period of IV & V semester and VI & VII Sem (Prescribed Period 08 weeks: Credits 08)

Sub Activity Head	Performance/ Appraisal	Assessment Rubrics	Proposed Document as Evidence	Evaluate d by
(1) Development of new product/ Business Plan/ registration of start- up/societal internship	Excellent Good Satisfactory Unsatisfactory and fail	80 to 100 60 to 79 40 to 59 < 39	from relevant Authorized	(i)Institute Faculty (mentor)
(2) Internship with Industry/ Govt. / NGO/ PSU/ Any Micro/ Small/Medium Enterprise.	Excellent Good Satisfactory Unsatisfactory and fail	40 . 70	Authority. Wherever only Certificate is issued,	together with External Expert if any.

#### Note:

(i) The total CIE marks shall be the sum of marks allotted to successfully completed activities by the student.

#### 3.7 Research Internships / Extended Industry Internships

- 3.7.1 Research Internship /Extended Industry Internship of sufficient duration encourages students early on in their careers. Its main goal is to allow improving their analytical and technical skills in an international environment. An internship can be in an industry or at an appropriate workplace.
- 3.7.2 Research internships and industrial internships have different purposes and come with a set of benefits. A prior experience in any field is always preferred over a fresh start. Therefore, one of them can be selected depending on the interest the students have. Internships pose unexpected challenges and make students think appropriately, tackle difficulties with ease, and act in a scholarly way to get past the hurdles and practical constraints. An internship is always beneficial however good or bad it is.
- 3.7.3 Internships not only enhance one's learning but also identifies him/her as someone who commits to approaching a project and completing it with or without guidance. Internship learning is an impetus for professional development.
- 3.7.4 While a research internship is a stepping stone to higher studies, an industry internship is a pathway to a placement. Those who are self-motivated and interested in searching for new things that are original and unique can choose a research internship. Those who are interested in real industry- experience and aspire to get a job soon after graduation can choose an industry internship.
- 3.7.5 Research Internships (Also known as dissertation internships) are focused research projects that push students' intellectual abilities beyond those driven by the classroom. Often, a research internship typically helps solve problems that are usually part of major research projects. It involves a short theoretical or experimental research project supervised by a researcher.

- 3.7.6 The research internships, under the advice of a faculty supervisor, can be one's own selected project or a project on which a Researcher is researching, or a new project/real-world project offered by an organization. The research area may be about single or multidisciplinary fields such as science, technology, engineering, mathematics, management, and business studies. Research internships can be carried out either individually or in teams (not exceeding 3 or 4 students).
- 3.7.7 Research internship opportunities, before graduation, maybe in a laboratory of college, a research institute, or a company's R & D department. Apart from fixed working hours of the day of an organization, the researcher can devote sufficient time to other researcher lated activities for early and successful completion of the Research Internship.

#### 3.7.8 Necessary Skills for Research Internship and Industrial Internship

For the internships to progress without hurdles and for successful completion, the Researchers should maintain a harmonious relationship with the guide/s, administrators, coworkers, and others, and strictly adhere to the rules and regulations of the workplace. The other skills required or acquirable during the Internship are,

- 1. Good Communication skills.
- 2. Attention to detail.
- 3. Planning and scheduling.
- 4. Documentation.
- 5. Critical thinking.
- 6. Data collection.
- 7. Data analysis.
- 8. Ability to maintain quality, safety, and/or infection control standards.
- 9. Appreciating and practicing ethical issues.

#### 3.7.9 Responsibilities of an Intern

Interns,

- 1. If working with a researcher, shall assist the researcher in an ongoing research project or work collaboratively in designing a new project of mutual interest.
- 2. Shall engage in literature survey and get an insight of the research work at the initial stages.
- 3. Shall compile data, sort, file, implement ideas with minimal guidance and assist write papers.
- 4. Shall become familiar with several tools [meters (Electrical and Electronics, mechanical, computer, etc.)] used in data collection, software, graphic software, Statistical Package for the Social Sciences (SPSS) software [IBM's statistical software platform], etc.
- 5. Shall attain skills with Microsoft Word Office, Excel, PowerPoint, Outlook, etc.
- 6. Shall give a mid-term oral presentation to a committee for review and feedback.
- 7. Shall attend discussions, meetings, symposiums, classroom lectures, etc., to learn new scientific techniques, design experiments, analyze results, and formulate different hypotheses.
- 8. Shall learn to write reports and be able to correspond independently.
- 9. Shall manage time effectively.
- 10. Shall keep a track of the progress of the project.
- 11. Shall develop integrative thinking.

#### 3.7.10 Research internship Outcomes

- 1. Generating technical paper/s and publishing in refereed journal/s.
- 2. Possibility of acquiring intellectual ownership and patent.
- 3. Build a prototype for an idea on which the research was carried out.
- 4. File patent/s.
- 5. Add academic knowledge to the field.
- 6. Enhanced ability in arranging meetings, presentations, seminars, training, etc.
- 7. Improved conscientiousness and ethics.

#### 3.7.11 Research internships Benefits

- 1. Are a great way to pursue an academic career in teaching and research, as a Research Scientist at a Research Organization, Company, Industry sector, etc.
- 2. Establish professional networks for a future career.
- 3. Pave the way to join a research team and work alongside leading experts in the field.
- 4. Introduced to new ideas through interaction with like-minded students and others.
- 5. Develop research skills and knowledge in a specific area of interest.
- 6. Provide opportunities for growth, achievement, and personal development.

  Offer an opportunity to publish a research paper that will boost the resume while applying for Post Graduate Studies

# 4. Evaluation Procedure of UC3001-1 Research Internship /Extended Industry Project/Internship/Project work (16 weeks)

- **4.1** The students pursuing the course UC3001-1 shall submit the diary recordings of day-to-day activities to the concerned guide, reporting progress achieved in the course and seeking guidance to proceed with the internship. The interns should provide all the details to the guide so that he/she can discuss with the employer to make the internship successful.
- **4.2** The intern should constantly update the guide about the progress of the internship. The guide should know the intern's internship tasks, duties, responsibilities, and potential projects. The evaluation of interns and their internship progress should be honest and constructive.
- **4.3** The hardcopy or softcopy of the diary maintained by the interns must be signed at regular intervals by the guide.
- **4.4** Regarding the intern's feedback, the guides should propose changes in internship activities so that they are helpful to the internship.
- **4.5** Illustrations, drawings, photos, forms, samples, classified materials, etc., are to be included in the report only after obtaining the consent of the concerned authorities and should indicate the source of all such material. The final report should also be submitted to the place where the internship was carried out. The report should avoid a tone that is predominantly cynical or unduly critical of the employer or of those with whom the student intern has worked. The content of the report must be based on interns' own work.

#### **4.6 Continuous Internal Evaluation (CIE)**

The guides should evaluate the interns using the following as well as any other appropriate methods:

- a) Punctuality of intern.
- b) Conduct and character.
- c) Tactfulness and politeness with colleagues and the public.
- d) Attitude regarding professionalism.

- e) Inquisitiveness and eagerness to learn.
- f) Research attitude.
- g) Problem-solving techniques.
- h) Innovation mindset.
- i) Time management and meeting deadlines.
- j) Receptiveness to feedback and critiques.
- k) Ability to work in a team as a member.
- 1) Ability to work without supervision.
- m) Supervisory skills and leadership skills.
- n) Judgment and decision-making skills.
- o) Writing skills, oral communication skills, technical communication skills, computer skills, analysis skills, and business writing skills.
- p) Appropriateness of technical skills.
- q) Familiarization with writing technical papers, standards, codes, etc.
- r) Reading Behavioural attitude.
- s) Outcomes.
- t) Successes and failures experienced

#### 4.7 Recommendation letter

The guide must state whether the intern,

- a) Exceeded the expectations of the internship.
- b) Met the expectations of the internship.
- c) Did not meet the expectations of the internship.
- d) Did work to a satisfactory level.
- e) Did an unsatisfactory internship.

In the end, the guide should issue a recommendation letter.

#### 4.8 Assessment of CIE marks

- 4.8.1 **Single discipline:** The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the internship, shall be based on the evaluation of the diary, presentation skill, and viva-voce in the ratio of 50:25:25.
- 4.8.2 **Interdisciplinary:** The CIE marks awarded for the internship, shall be group-wise at the institution level with the participation of all guides of the internship. Participation of external guide/s, if any, is desirable.
- **4.8.3** The CIE marks awarded for the internship, shall be based on the evaluation of the diary, presentation skill, and viva-voce in the ratio of 50:25:25.

#### 4.9 Assessment of SEE marks

- 4.9.1 Single discipline: Contribution to the internship and the performance of each group member shall be assessed individually in the semester-end examination (SEE) conducted at the department. Marks shall be awarded based on the evaluation of the report, presentation skill, and viva-voce in the ratio of 50:25:25.
- 4.9.2 Interdisciplinary: Contribution to the internship and the performance of each group member shall be assessed individually in the semester-end examination (SEE) conducted separately at the departments to which the student/s belongs. Marks shall be awarded based on the evaluation of the report, presentation skill, and viva-voce in the ratio of 50:25:25.

# 4.10 Evaluation of research Internship/Extended Industry Internship/Project Work:

# **Split-up of marks for evaluation of Project work** for 100 CIE marks and 100 SEE marks

Split up Rubrics						
		Abstract/ Synopsis Write-up	10			
	Content Development	Selection of Topic/ Relevance of the subject to the concerned discipline	05			
		Problem Identification	05			
Report (50 Marks)		Objectives and Methodology	05			
		Literature Survey (Papers/Sites/Sources Surveyed)	10			
	Problem- Oriented	Documentation/ Systematic Approach	10			
	Exposition	Results (with inferences, Conclusions, etc.)	05			
Project		Quality of preparation of presentation	05			
Presentation Skill		Communication Skills	05			
(25 Marks)		Technical knowledge and awareness	05			
(20 1/141115)		Individual involvement	10			
Viva- Voce		The clarity in answering questions relating to fundamentals and concepts	10			
(25 Marks)		The clarity in answering the questions related to the project	05			
		The understanding ability of the questions asked	05			
		The confidence in answering the questions asked.	05			
		Total Marks	100

## B. Tech in DEPARTMENT OF CIVIL ENGINEERING

#### Vision

To uphold the Department as a leader in community development through innovation and excellence in diverse areas of Civil Engineering to meet the global challenges and market demands.

#### Mission

- 1. To provide the students a strong theoretical knowledge and practical skills to understand the basic concept and fundamentals of various Civil Engineering subjects.
- 2. To be competent and skilled enough to take the challenges in Research, Consultancy and Entrepreneurship.
- 3. To encourage the students in developing professional ethics through discipline and principles.

# **Programme Educational Objectives (PEOs)**

The graduates of the program will be

- **PEO1** Equipped with fundamentals of civil engineering along with interdisciplinary science, engineering and management concepts.
- **PEO2** Equipped with advanced and emerging field of civil engineering practices to compete and match with the industrial requirements.
- **PEO3** Competent enough to conceive the ideas, prepare plan, design, execute, monitor and manage the project with the effective utilization of resources such as men, material, machine and money along with time effectively.
- **PEO4** Continue to learn and adapt to suit the needs and challenges of real-world problems and come up with optimal solutions.

#### **Programme Outcomes (POs)**

- **PO1 Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3 Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

- **PO4 Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7 Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8 Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9** Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10 Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO12 Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### **Program Specific Outcomes (PSOs)**

- **PSO1** Ability to apply the knowledge of Civil Engineering domains, conduct experiments, analyze, interpret data and design the system components.
- **PSO2** Enrich the knowledge in Structural, Geo technical, Transportation, Environmental Engineering, Water Resources, Infrastructure and Development, Surveying and Geo-informatics by means of innovative practices.
- **PSO3** Competency to plan, produce detailed drawings, write specification, prepare cost estimates, selection of materials, schedule work plans, execute and value real properties.

#### **Teaching Department: Mathematics**

#### **Course Objectives:**

1. This course will enable the students to master the basic tools of differential calculus, infinite series, elementary linear algebra, partial differentiation, multiple integration and become skilled for solving problems in science and engineering.

#### **UNIT-I**

Matrices 8 Hours

Elementary transformation of a matrix, Echelon form and rank of a matrix. Consistency and solution of system of linear equations; Gauss elimination method and approximate solution by Gauss Seidel method. Eigen values and eigen vectors of square matrices, Rayleigh's power method to find the largest eigen values and eigen vectors of square matrices.

#### **Sequences and Series**

7 Hours

Convergence and divergence of infinite series. Tests for convergence of positive term series- comparison test, D-Alembert's ratio test and Cauchy's root test. Power series- Taylor's theorem for a function of single variable with remainder (without proof), expansion of functions into Taylor's and Maclaurin's series.

#### **UNIT-II**

#### Differential Calculus 7 Hours

Polar curves, angle between the radius vector and the tangent, angle of intersection of two curves. derivatives of arcs, radius of curvature - cartesian, parametric and polar forms. Rolle's Theorem (without proof), mean value theorems and applications to simple problems.

#### **Partial Differentiation**

8 Hours

Partial derivatives of simple functions, total differentiation - differentiation of composite and implicit functions, Jacobians. Taylor's theorem for functions of two variables, maxima and minima for functions of two variables, Lagrange's method of undetermined multipliers (with one subsidiary condition).

#### **UNIT-III**

#### **Multiple Integrals**

10 Hours

Double integrals and triple integrals, evaluation by change of order of integration, change of variables and applications to area and volume. Beta and Gamma functions and their properties.

#### Course Outcomes: At the end of the course student will be able to

- **1.** Solve the system of linear equations and find eigen values and eigen vectors of the given matrix.
- 2. Develop the power series of the given function and understand the concept of convergence and divergence of series.
- 3. Apply the concept of radius of curvature and mean value theorems.

- 4. Learn the concept of partial differentiation of a function with two or more independent variables, apply them to solve engineering problems and examine the given function for its extrema.
- 5. Apply the notion of multiple integrals to find areas and volumes.

Course Code:	CY1004-1	Course Type:	BSC
Teaching Hours/Week (L: T:P: S):	2:2:2:0	Credits:	04
Total Teaching Hours:	40+0+26	CIE + SEE Marks:	50+50

# **Teaching Department: Chemistry**

# **Course Objectives:**

- To enable students to acquire knowledge on principles of chemistry for engineering applications.
- To develop an intuitive understanding of chemistry by emphasizing the related branches of engineering.
- To provide students with a solid foundation in analytical reasoning required to solve societal problems.

#### **UNIT-I**

#### Structural Materials

8 Hours

**Metals and Alloys:** Introduction, Properties and application of Iron and its alloys, Aluminium and its alloys.

Ceramics: Introduction, Types of ceramics, properties, application of ceramics in construction. Refractories: Introduction, classification based on chemical composition, properties, and application of refractory materials.

Glass: Introduction, Composition, Types, Preparation of Soda-lime glass, properties, and applications of glass.

# **Smart construction materials and their applications**

03 Hours

Introduction, types of smart materials – Shape memory alloys, shape memory polymers, piezoelectric materials, electrochromic materials, applications of smart materials in construction.

Nanomaterials 04 Hours

Nanotechnology: Introduction, size dependent properties of nanomaterial (surface area and catalytic), Synthesis of nanomaterial by sol-gel method and co-precipitation method. Nanomaterials: Introduction, properties and engineering applications of carbon nanotubes, graphene, and nanomaterials for water treatment (Metal oxide).

## **UNIT-II**

## **Polymers and Composites**

08 Hours

**Polymers**: Introduction, methods of polymerization, molecular weight of polymers, numerical problems. Synthesis, properties, and engineering applications of polyethylene (PE) and Chloro polyvinylchloride (CPVC).

Fibers: Synthesis, properties, and applications of nylon fibers.

Polymer composites: Introduction, properties, and applications of fiber reinforced polymers composites (FRPC) and Carbon Fiber

Geopolymer concrete: Introduction, synthesis, constituents, properties, and applications.

Adhesives: Introduction, properties, and applications of epoxy resin.

Biodegradable polymers: Synthesis of polylactic acid (PLA) and their applications.

Soil Chemistry 07 Hours

Chemical (elemental) composition of soil.

Soil fertility and soil productivity – definition and factors affecting, Classification of essential nutrients: Macronutrients and Micronutrients, Functions and deficiency symptoms of N, P, K. Micronutrients - critical limits in soils and plants; factors affecting their availability and correction of their deficiencies in plants; role of chelates in nutrient availability.

Acid soils and calcareous soils – their formation and Management.

#### **UNIT-III**

# **Electrochemical cells and Analytical Techniques**

10 Hours

**Electrode System**: Introduction, types of electrodes. Reference electrode- Introduction, calomel electrode— construction, working and applications of calomel electrode. Concentration cell-Definition, construction, working, and Numerical problems. Ion selective electrode-definition, construction, working and applications of glass electrode. Determination of pH using glass electrode.

**Analytical techniques:** Introduction, principle, instrumentation of potentiometric sensors and its application in the estimation of iron, conductometric sensors and its application in the estimation of acid mixture, pH sensors and its application in the determination of soil sample.

	Suggested List of Experiments
1.	Determination of strength of an acid in Pb-acid battery (Demonstration).
2.	Determination of Total Hardness of a sample of water using disodium salt of
	EDTA.
3.	Estimation of iron in TMT bar by diphenyl amine/external indicator method.
4.	Synthesis of polyurethane (Demonstration).
5.	Conductometric estimation of strong acid with standard NaOH solution.
6.	Potentiometric estimation of FAS using standard K <sub>2</sub> Cr <sub>2</sub> O <sub>7</sub> solution.
7.	Determination of pKa of vinegar using pH sensor (Glass electrode).
8.	Determination of the viscosity coefficient of a given liquid using Ostwald's viscometer.
9.	Estimation of Copper present in electroplating effluent by optical sensor (colorimetry).
10.	Colorimetric determination of iron.
11.	Conductometric estimation of a weak acid using standard NaOH solution.
12.	Estimation of Sodium present in soil/effluent sample using flame photometer.
13.	Synthesis of biodiesel (Demonstration).

14. Synthesis of Iron-oxide Nano particles (Demonstration).

# Course Outcomes: At the end of the course student will be able to

- 1. Identify the terms processes involved in scientific and engineering and applications.
- 2. Explain the phenomena of chemistry to describe the methods of engineering processes.
- **3.** Solve the problems in chemistry that are pertinent in engineering applications.
- 4. Apply the basic concepts of chemistry to explain the chemical properties and processes.
- 5. Analyze properties and multi processes associated with chemical substances in disciplinary situations.

ENGINEERING MECHANICS									
Course Code:	CV1003-1	Course Type	ESC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50						

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

- Develop the analytical skills to solve coplanar concurrent and non-concurrent force system
- **2. Understand** centroid and moment of inertia of plane areas
- **3. Understand** free body diagram concept and **analyze** cylinders, strings, block and ladder using equilibrium conditions.
- **4. Identify** different types of supports, loadings and **analyze** determinate beams
- **5. Understand** bending and shear force variation in determinate beams

#### **UNIT-I**

08 Hours

**Engineering mechanics:** basic idealizations, definition of force, characteristics of a force, classification of force system, principle of transmissibility.

**Resultant of coplanar concurrent force system:** resolution of a force, composition of forces, resultant and equilibrant, resultant of coplanar concurrent force system.

**Resultant of Coplanar non-concurrent force system:** Moment of a force, couple, characteristics of couple, Equivalent force - couple system; Varignon's theorem, resultant of coplanar non-concurrent force system.

08 Hours

**Centroid:** Centroid of plane areas, locating the centroid of rectangular, triangular and circular areas using method of integration, centroid of simple composite areas.

**Moment of Inertia:** Moment of inertia of an area, polar moment of inertia, radius of gyration, perpendicular axis theorem and parallel axis theorem; moment of inertia of rectangular, triangular, and circular areas from the method of integration; moment of inertia of plane areas.

# **UNIT-II**

**08 Hours** 

**Equilibrium of rigid bodies:** Definition, conditions of equilibrium for coplanar concurrent force system, concept of free body diagram, equilibrium of cylinders and strings.

**Friction:** Theory of friction, types of friction, Coulumb's laws of friction, limiting friction, angle of friction, plane friction and ladder friction.

08 Hours

**Support Reactions:** Types of beams, loads, and supports, support reactions for statically determinate beams with point load (normal and inclined), uniformly distributed load(UDL), uniformly varying loads(UVL), and moments.

#### **UNIT-III**

08 Hours

**Shear force and bending moment:** Definition, relationship between loading, shear force and bending moment, shear force and bending moment diagrams for statically determinate beams subjected to point loads, UDL, UVL and couple.

Course Outcomes: At the end of the course student will be able to

- **1. Solve** resultant of coplanar concurrent and non-concurrent force system.
- **2. Determine** the centroid and moment of inertia of plane areas about the reference axes.
- **3. Analyze** for unknown forces in the cylinders, strings, block and ladder using equilibrium conditions.
- **4. Find** the support reactions of determinate beams.
- **5. Analyze** the determinate beams and draw the variation of bending moment and shear force.

BASIC ELECTRICAL AND ELECTRONICS ENGINEERING								
Course Code:	EE1002-1	Course Type	ESC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
Total Teaching Hours	40	CIE + SEE Marks	50+50					

# **Teaching Department: Electrical and Electronics Engineering**

# **Course Objectives:**

1.	To get familiarized with the DC circuit analysis.
2.	To understand the working principle of transformer and electrical machines.
3.	Understand the working of Semiconductor Diodes, Zener Diodes and its
	applications.
4.	Understand the construction, working and characteristics of diodes, BJT and
	MOSFET
5.	Understand the working of Op-Amp and their applications

## UNIT-I

# Circuit Fundamentals 08 Hours

Basic nodal and mesh analysis excited by independent DC voltage sources, Power and Energy. Generation of sinusoidal voltage, frequency of generated voltage, definition and numerical values of average value, root mean square value, form factor and peak factor of sinusoidally varying voltage and current, phasor representation of alternating quantities.

Analysis of R, L, C, R-L, R-C and R-L-C series and parallel circuits. Phasor Diagrams. Real power, reactive power, apparent power and power factor.

## **Transformers and electrical machines**

08 hours

**Transformers:** Necessity of transformer, principle of operation, Types and construction of single-phase transformers, EMF equation, losses, variation of losses with respect to load. Efficiency (simple numerical)

**DC Motor:** Principle of operation, back emf and its significance. Torque equation, types of motors, characteristics and speed control (armature & field) of DC motors (series & shunt only). Applications of DC motors (simple numerical)

**Three-phase induction Motors:** Concept of rotating magnetic field, Principle of operation, constructional features of motor, types – squirrel cage and wound rotor. Slip and its significance (simple numerical)

UNIT-II	
Diodes, Transistors and their applications	16 Hours

Semiconductor Diode, Diode Equivalent circuits, Half Wave Rectifier, Full wave Bridge Rectifier, capacitor, and choke filter circuit (only qualitative approach). Zener Diode and its use in Voltage Regulation.

**Bipolar Junction Transistor:** Construction and operation, Common Emitter and Common Base Characteristics, DC load line analysis, RC coupled amplifier (frequency response excluded), BJT as a switch, BJT circuit to switch ON/OFF an LED. Field Effect Transistor, Enhancement mode MOSFETs, CMOS Inverter.

#### UNIT-III

# **Op-Amp & Linear IC Applications**

**08 Hours** 

Introduction, Op-Amp Specifications, Differential & Common-Mode operation, Op-Amp applications:

Inverting/Non-Inverting Amplifier, Summing, Integrator, Differentiator, Comparator. 555 Timer IC in Astable mode. 78XX series IC Voltage Regulators.

**Course Outcomes:** At the end of the course student will be able to

1	L.	Analyse DC and AC circuits to determine circuit parameters
2	2.	Describe the construction, operating principle of Transformers, DC & Induction
		motors to study performance characteristics.
3	3.	Analyze characteristics of p-n junction and Zener diode to understand their operation
		in specific applications
4	1.	Describe the construction and operation of BJT and FET to operate it as a switch
5	5.	Describe the basic building blocks of Op-Amp and signal processing circuits to design
		On-Amn for timing circuits

INTRODUCTION	INTRODUCTION TO PYTHON PROGRAMMING									
Course Code:	CS1005-1	Course Type:	PLC							
Teaching Hours/Week (L: T: P: S):	2:0:2:0	Credits:	03							
Total Teaching Hours:	26+0+26	CIE + SEE Marks:	50+50							

# Teaching Department: Computer Science & Engineering

# **Course Objectives:**

1.	Construct python programs using data types and looping.
2.	Make use of python operators for manipulating lists, dictionaries and files.
3.	Design function based Python programs.
4.	Design list, tuple related programs in Python.

**5.** Write string handling programs in python.

## **UNIT-I**

Introduction 10 Hours

Introduction to Computer generations and types, CPU, Primary Memory, Secondary Memory, Ports and Connections.

Problem solving, Program Development steps, Introduction to Algorithms and Flowcharts. Introduction to python, basic syntax, interactive shell, editing, saving, and running a script. The concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program; understanding error messages;

Conditions, Boolean logic, logical operators; ranges; Control statements: if-else, loops (for, while); short-circuit evaluation

## **UNIT-II**

#### Data structure and function

10 Hours

LISTS, TUPLES, AND DICTIONARIES; basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.

#### **FUNCTIONS**

Design with functions: hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Recursive functions, Lambda functions. Introduction to Object oriented concepts – Class, object and member function

#### **UNIT-III**

# Strings and text files

06 Hours

STRING MANIPULATIONS: subscript operator, indexing, slicing a string; strings and number system: converting strings to numbers and vice versa, Binary, octal, hexadecimal numbers Manipulating files and directories, text files: reading/writing text and numbers from/to a file; creating and reading a formatted file (csv or tab-separated).

# **Suggested List of Experiments**

- **1.** Experiments related to basic operation, data types and variables.
- **2.** Experiments related to operations of Lists, tuples and dictionaries.
- **3.** Experiments on writing functions and parameter passing.
- **4.** Experiments related to working with strings.
- **5.** Experiments related to file handling.

# Course Outcomes: At the end of the course student will be able to

- 1. Experiment with the basics of python programming like data types and looping
- **2.** Experiment string manipulation operators in programming
- **3.** Apply the Python operators for manipulating lists, dictionaries and files
- **4.** Design functions in python for modular programming
- **5.** Perform operations on string

	IT SKILLS		
Course Code:	CS1651-1	Course Type:	AEC
Teaching Hours/Week (L: T: P: S):	1:0:2:0	Credits:	02
Total Teaching Hours:	13+0+26	CIE + SEE Marks:	50+50

# **Teaching Department: Computer Science & Engineering**

# **Course Objectives:**

Demonstrate the basics of Android Programming.
Design and develop effective static web pages.
Describe the basic concepts of Cloud.
Analyse data using Microsoft Excel.

# **Suggested List of Experiments**

# 6. Design and create simple game using MIT-scratch/Code.org

**5.** Create interactive gaming applications through Scratch coding.

- Design and create catch game using MIT scratch coding.
- Design and create a Jumping game using MIT scratch coding.
- Design and create pong game using MIT scratch coding.

# 7. Design and create simple android applications using MIT app inventor.

- Create an application to display a "Hello, World!" message on screen.
   Application should also display the current time and date.
- Implement an application to change the background colour and image of the screen.
- Create a simple calculator which can perform basic arithmetic operations like addition, subtraction, multiplication, or division depending upon the user input.
- Build a bouncing ball app or make a ball bounce around on the screen (on a Canvas).
- Write an application to send SMS using MIT app inventor and also implement a text-to-speech application by passing text from the user.

# 8. HTML and CSS

HTML: Basic Tags - paragraph, headings, Hyperlinks, image, tables, HTML forms.

- **9.** HTML Lists: Unordered Lists, Ordered Lists and Definition list.
- **10.** Create a form for a survey on the topic of your choice.Include a variety of answer options, including text fields, dropdowns, radio buttons, checkboxes, and a submit button. Use CSS to improve the look of your form.
- **11.** Design and create web page for a travel book /recipe book with more than 3 pages, add table to list places /recipes (iframe, hyperlink)
- 12. Create user account and demonstrate use of Google drive, Google docs, Google Form.

- Upload and share any files and folders in google drive using different file permissions.
- Creation of google forms for applications such as a registration form, feedback form, quiz etc.
- Creation of google docs with citation from websites.

# 13. Data Analysis using Microsoft Excel.

- Basic Excel Formulas: Concatenate(),Len(),Days(), Net workdays(), Count(), Counta(), If(), Iferror(), Find(), Search(),Left(), Right() and Rank().
- Conditional Math: Learn to use SUMIF(), SUMIFS(), AVERAGE(), AVERAGEIF(), AVERAGEIFS(), COUNTIF(), COUNTIFS() to add cells only when certain conditions are met.
- VLOOKUP with Approximate or Exact Match: Learn to use VLOOKUP to find an approximate or exact match and return the corresponding value, work with INDEX, MATCH, and HLOOKUP as alternatives to the VLOOKUP function.
- Conditional Formatting: Apply the different rules to the values of the cell in sheets to carry out the analysis of data.
- Optimizing Data: Sorting, Filtering, Excel PivotTables
- Data Validation: Use Data Validation to ensure that users enter valid data in input cells, o restrict users' ability to enter invalid data in cells by providing them with a drop-down list of valid options.
- Data Visualization in Excel-Charts by generating various types of charts.

## Course Outcomes: At the end of the course student will be able to

Develop Gaming Applications using Scratch Coding.
 Understand the basics of Android Programming.
 Design attractive and effective Static Web pages.
 Analyse the basic concepts of Cloud.
 Utilize Microsoft Excel to conduct data analysis.

# **Teaching Department: Biotechnology**

# **Course Objectives:**

- To learn the types of cells, biomolecules, and life processes
   To know the applications inspired by nature in various streams
- 3. To be updated application of biology in real life scenarios.

#### **UNIT-I**

# **Introduction For Biology for Engineers**

05 Hours

Why Biology for Engineers? Cell Types & Properties: Prokaryotes - Bacteria, Viruses and Fungi, Eukaryotes - Plant and Animal Cells, Biomolecules, Life Processes at Cellular Level.

#### **UNIT-II**

# **Applications Inspired by Nature**

05 Hours

05 Hours

Composites in Construction, Termite Mound architecture, Counter current heat exchangers, Design of aeroplane, helicopter and submarine, Information Theory and Biology, SONAR, Medical Devices.

#### UNIT-III

Real Life Scenarios

Recent scenarios in Environment, Agriculture and Medical Technology.

Course Outcomes: At the end of the course student will be able to

- Ascertain the importance of Biology to be applied in various engineering streams
   Interpret the basics of cell and life processes
  - 3. Draw inspiration nature in design of machinery and construction
  - 4. Analyze the significance of mimicry of nature in design of electrical, electronic, and medical devices
  - 5. Judge knowledge on recent advances in application of biology to Environment, Agriculture and Medical Technology

ENVIRONMENTAL STUDIES											
Course Code:	CV1002-1	Course Type	MNC								
Teaching Hours/Week (L: T: P)	1:0:0	Credits	00								
Total Teaching Hours 15+0+0 CIE + SEE Marks !											

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

- 1. To raise consciousness about environmental conditions and to imbibe environmentally appropriate behaviour.
- 2. To equip the engineering undergraduates to identify the significance of environmental practice in their daily life and in the engineering practices.
- 3. To make them conscious of understanding the environment where we live and act up on.

# **UNIT-I**

03 Hours

#### **Environment**

Definition, significance of environmental studies- current scenario, local, regional, national and global problems

Components of environment: atmosphere, hydrosphere, lithosphere, and biosphere. Layers of atmosphere and its role.

Parts of Earth-lithosphere and its role; hydrological cycle

Eco system

Definition, ecology and environment, ecosystem components: biotic and abiotic components; ecological balance; elements of ecosystem: biotic, abiotic; producers, consumers and decomposers.

Habitat, range of life, Biome, balanced eco- system, food chain, food web and ecological pyramids

**Human** activities

The Anthropogenic System- human activities like growing food, building shelter and other activities for economy and social security. Soil erosion, water logging -definition. Organic farming- definition.

Natural resources 03 Hours

**Resources** - Natural resources, water, minerals, Fossil fuels and energy

**Water resources** - Global water resources: distribution, uses of water for irrigation, domestic and industrial purposes in India.

**Quality aspects** - Water quality parameters, drinking water standards for turbidity, pH value, total hardness, iron, fluoride, lead, arsenic, nitrate

**Mineral resources**- Metallic minerals, non-metallic minerals Fossil fuels - Coal and petroleum

**Forest Wealth** - Components of the forest, key benefits of forests. Deforestation-environmental effects of deforestation and remedies Sustainable development- definition, objectives

Material cycles - Carbon, Nitrogen, and Sulphur cycles.

#### **UNIT-II**

# **Environmental pollution: Definition, harmful effects related to public health**

03 Hours

# Water pollution:

Definition, types, and sources – agriculture (pesticides and fertilizers), industry, domestic and mining, harmful effects, water borne and water induced diseases- definition, common diseases and their causatives, Fluoride problem in drinking water

# Land pollution:

Definition, sources\_agriculture, housing, industry, mining, transportation. Types of municipal Solid waste Disposal (Sanitary landfills, composting, incineration (in brief) and effects

# Air Pollution:

Definition, types, and sources: industry, mining, agriculture, transportation, and effects **Noise pollution**:

Definition, sources, mining, industries, rail-roads, aviation, effects and control measures

Energy 02 Hours

# Different types of energy-

Non-renewable energy; fossil fuels- coal, oil, and natural gas- brief description only. Nuclear energy- nuclear power plants,

Renewable energy: solar energy- Photovoltaic systems for street and domestic lighting, solar water heating-brief description only

Wind energy- definition, merits and demerits, Hydro power- definition, merits, and demerits. Biomass energy- definition, sources of bioenergy, biogas, biofuels, India's position in renewable energy

Hydrogen as an alternative future source of energy- brief scope, fuel cells.

#### UNIT-III

# **Current environmental issues of importance**

04 Hours

Population growth- Definition, growth rate, effects, remedies Urbanization - environmental impacts and remedies Global warming and climate change-

Definition,

Concept of greenhouse effect, sources of greenhouse gases, effects, and remedial measures of greenhouse gases

Acid rain: Definition, causes and effects, control measures. Ozone Depletion: Definition, causes, effects, and control measures.

Environmental Impact Assessment- EIA definition, objectives, and benefits of EIA.

# Course Outcomes: At the end of the course student will be able to

- 1. Identify the significance of environmental practice in their daily life and in the Engineering practices.
- 2. Create awareness about environmental conditions.
- 3. Follow environmentally appropriate behaviour.
- 4. Understand the importance of their surroundings.
- 5. Understand Current environmental issues of importance

# Calculus and Laplace Transforms (common to BT\CV \ME)

Course Code:	MA1008-1	Course Type	BSC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50

# **Teaching Department: Mathematics**

# **Course Objectives:**

1. This course will enable the students to master the basic tools of Laplace transforms, differential equations, partial differential equations and become skilled for solving problems in science and engineering.

#### **UNIT-I**

20 Hours

#### **DIFFERENTIAL CALCULUS**

Polar curves, angle between the radius vector and the tangent, angle of intersection of two curves. derivatives of arcs, radius of curvature - cartesian, parametric and polar forms. Rolle's Theorem (without proof), mean value theorems and applications to simple problems.

Applications: Structural design and paths, Strength of materials, Elasticity.

#### **PARTIAL DIFFERENTIATION**

Partial derivatives of simple functions, total differentiation - differentiation of composite and implicit functions, Jacobians. Taylor's theorem for functions of two variables, maxima and minima for functions of two variables, Lagrange's method of undetermined multipliers (with one subsidiary condition).

Applications: Estimating the critical points and extreme values

# **UNIT-II**

# LAPLACE TRANSFORMS 12 Hours

Definitions, transforms of elementary functions, transforms of derivatives and integrals-properties. Periodic functions, unit step functions and unit impulse functions.

Inverse Transforms and properties, convolution theorem, initial & final value theorems. Applications to engineering problems.

Applications: solving the free vibration problems of structural beams.

#### **UNIT-III**

# PARTIAL DIFFERENTIAL EQUATIONS

08 Hours

First and higher order partial differential equations. Formation of partial differential equations by elimination of arbitrary constants/arbitrary functions. Derivation of one-dimensional heat and wave equations, Solution of PDE's by direct integration method, by the method of separation of variables, by Lagrange's Method. Solution of partial differential equations of derivatives involving only one independent variable.

# Course Outcomes: At the end of the course student will be able to

**1.** Apply the concept of radius of curvature and mean value theorems.

2.	Learn the concept of partial differentiation of a function with two or more independent variables, apply them to solve engineering problems and examine the							
	given function for its extrema.							
3.	Understand the concept of Laplace Transform and apply it to solve engineering							
	problems.							
4.	Make use of Laplace transform method to solve linear ordinary differential							
	equations with constant coefficients							
5.	5. Understand the derivation of one dimensional heat and wave equations and solve							
	partial differential equations

PHYSICS FOR BUILDINGS AND CONSTRUCTIONS							
Course Code:	PH1005-1	Course Type:	IPCC				
Teaching Hours/Week (L:T:P:S):	2:2:2:0	Credits:	04				
Total Teaching Hours:	40+26	CIE + SEE Marks:	50+50				

# **Teaching Department: Physics**

# **Course Objectives:**

1.	To understand the concepts of oscillations and resonance.						
2.	To study the theory of elasticity.						
3.	To understand the principles of lasers.						
4.	To study the concepts of optical fibers						
5.	To study the acoustics of buildings.						

#### UNIT-I

# **Oscillations and Elasticity**

Oscillations 08 Hours

Introduction, Simple Harmonic motion (SHM), Differential equation for SHM (No derivation), Free, Damped and Forced oscillations, Resonance, coupled oscillations, Sprigs: Stiffness Factor and its Physical Significance, Series and Parallel combination of springs (Derivation), Types of Springs and their applications. Theory of Damped oscillations (Qualitative), Types of Damping (Graphical Approach). Engineering applications of Damped oscillations, Theory of Forced oscillations (Qualitative), Resonance, Sharpness of resonance. Numerical Problems.

Elasticity 07 Hours

Basics of elasticity, Stress-Strain Curve, Hook's law, Different Moduli of Elasticity, Poisson's ratio, Relation between Y, n and  $\sigma$  (with derivation), mention of relation between K, Y and  $\sigma$ , limiting values of Poisson's ratio. Torsion of a cylinder and determination of couple per unit twist – Torsion pendulum, Beams: Bending moment and derivation of expression, Cantilever and I section girder and their Engineering Applications, Elastic materials (qualitative), Numerical problems

	UNIT-II
Pl	notonics
LASER	8 Hours

Introduction to lasers, Properties of a LASER Beam, Interaction of Radiation with Matter, Components of LASER, LASER action, Population Inversion, Metastable State, Requisites of a LASER System— active medium, pumping mechanism and optical resonant cavity, Semiconductor LASER, Applications: LASER Range Finder, LIDAR, Road Profiling, Bridge Deflection, Speed Checker, Numerical Problems.

Optical Fibers 7 Hours

Introduction to optical fibers, Principle and Construction of Optical Fibers, Propagation mechanism in optical fibers - Acceptance angle and Numerical Aperture (NA), Expression for NA, Modes of Propagation, Types of optical fibers, Attenuation and Fiber Losses, Applications: Fiber Optic Displacement Sensor, Fiber Optic Temperature Sensor, Numerical Problems.

# **UNIT-III**

# **Acoustics**

Acoustics 10 Hours

Introduction to Acoustics, Introduction to sound, Velocity, frequency and wavelength of sound, Classification of sound, Characteristics of musical sound, Loudness and Intensity, Weber-Fechner law, Sound intensity level, Sound pressure level, Human audiogram, Units of loudness, Reflection, refraction and diffraction of sound waves, Reverberation and reverberation time, Absorption power and Absorption coefficient, Requisites for acoustics in auditorium, Sabine's formula (derivation), Measurement of absorption coefficient, Factors affecting the acoustics and remedial measures, Sound Insulation and its measurements. Noise and its Measurements, Impact of Noise in Multi-storied buildings.

	List of Experiments							
	1.	Spring constant (k) by static and dynamic methods						
2.		Effective spring constant of the given springs in series and parallel combinations						
3.		Young's modulus of the material of the given bar by single cantilever.						
4.		Young's modulus of the material of the given bar by Uniform Bending						
5.		Rigidity modulus of the Material of the wire using Torsional Pendulum.						
6.		Wavelength of Laser using Diffraction Grating.						

7.	Numerical Aperture of the given Optical Fiber.
8.	Photo-Diode characteristics
9.	Diffraction Halos - Determination of size of the particles.
10.	Ultrasonic interferometer

#### **Course Outcomes:** At the end of the course student will be able to

	L.	Elucidate and explore the concepts of oscillations and resonance.						
2	2.	Discuss and apply the concepts of Elasticity.						
	3.	Describe the principles of LASERS and their relevant applications.						
4	1.	Describe the principles of Optical fibers and their relevant applications.						
ļ	5.	Elucidate the concepts of acoustics in buildings

Elements of	Mechanical	Engineering	
Course Code:	ME1003-2	Course Type	PCC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50

# **Teaching Department: Mechanical Engineering**

# **Course Objectives:**

5.

Students belonging to all branches of Engineering are made to learn certain fundamental topics related to mechanical engineering so that they will have a minimum understanding of mechanical systems, equipment and processes.

- Understand the principles of energy sources, formation of steam and boilers.
   Know the working principles of pumps, compressors, and turbines.
   Understand basic principles of I. C. Engines, Refrigeration and Airconditioning.
   Understand the basic principles of power transmission and metal joining processes.
  - **UNIT-I**

Understand the different machining operations, automation, and robotics.

09 Hours

# **Introduction to Mechanical Engineering (Overview only):**

Role of Mechanical Engineering in Industries and Society- Emerging Trends and Technologies in different sectors such as Energy, Manufacturing, Automotive, Aerospace, and Marine sectors. Biomaterials, Biomedical applications, implants.

# Simple stress and strain

Introduction, stress, strain, Mechanical properties of materials, Linear elasticity, Hook"s Law and Poisson's ratio, Stress-Strain relation - behavior in Tension for Mild steel and nonferrous metals. Modes of heat transfer, Laws of Thermodynamics, Steam Formation and its application.

# **Energy Sources and Power Plants:**

Basic working principles of Hydel power plant, Thermal power plant, nuclear power plant, Solar power plant, Tidal power plant and Wind power plant.

06 Hours

**Hydraulic Pumps:** Introduction, classification and specification of pumps, reciprocating pump and centrifugal pump, concept of cavitation and priming.

Compressors: Classification, Single Stage Reciprocating Compressor

**Turbines:** Working principles of Impulse and Reaction steam turbines (De Laval and Parson's turbines), Hydraulic/ Water turbines (Pelton wheel, Kaplan, and Francis turbines), Gas turbines (Open and Closed cycles).

#### **UNIT-II**

09 Hours

**Introduction to IC Engines:** Components and working principles, 4-Stroke Petrol and Diesel engines, Application of IC Engines, performance of IC engines (Simple numericals).

**Insight into future mobility technology;** Electric and Hybrid Vehicles, Components of Electric and Hybrid Vehicles. Advantages and disadvantages of Electric Vehicles (EVs) and Hybrid vehicles.

**Introduction to Refrigeration and Air Conditioning:** Principle of refrigeration, Refrigerants and their desirable properties. Working principle of VCR refrigeration system, working principle of room air conditioner & Applications of air Conditioners.

06 Hours

## **Mechanical Power Transmission:**

**Gear Drives:** Types - spur, helical, bevel, worm and rack and pinion, velocity ratio, simple and compound gear trains (simple numerical problems)

**Belt Drives:** Introduction, Types of belt drives (Flat and V-Belt Drive), length of the belt and tensions ratio (simple numerical problems)

**Joining Processes:** Soldering, Brazing and Welding, Definitions, classification of welding process, Arc welding, Gas welding, (types of flames), TIG welding, MIG welding and Fusion welding.

## **UNIT-III**

10 Hours

# **Machine Tool Operations:**

**Lathe:** Principle of working of a center lathe, lathe operations: Turning, facing, knurling, thread cutting, taper turning by swivelling the compound rest,

**Drilling Machine:** Working of simple drilling machine, drilling operations: drilling, boring, reaming, tapping, counter sinking, counter boring,

**Milling Machine:** Working and types of milling machine, milling operations: plane milling, end milling and slot milling.

(No sketches of machine tools, sketches to be used only for explaining the operations).

**Mechatronics and Automation:** Meaning, Need for automation, Types - Fixed, Programmable & Flexible automation. Elements of automated systems, Open and Closed loop control systems. Example of a simple pneumatic/ hydraulic/ electro-pneumatic circuit with function of each component.

**Robotics:** Introduction, Robot Anatomy, Classification based on Robot Configuration, Applications of Robots.

# Course Outcomes: At the end of the course student will be able to

1.	Explain the principles of energy sources, formation of steam and Energy sources.
	And simple stress sand strain.
2.	Discuss the working principles of pumps, compressors, and turbines.
3.	Explain basic principles of I. C. Engines, Future mobility and Refrigeration,
	Airconditioning
4.	Discuss the basic principles of power transmission and metal joining processes.
5.	Explain the different machining operations, automation, and robotics.

COMPUTER AIDED ENGINEERING GRAPHICS											
Course Code:	ME1002-1	Course Type	ESC								
Teaching Hours/Week (L: T: P: S)	2:0:2:0	Credits	03								
<b>Total Teaching Hours</b>	60	CIE + SEE Marks	50+50								

# **Teaching Department: Mechanical Engineering**

# **Course Objectives:**

- 1. To impart and inculcate understanding of the theory of projection and concepts like dimensioning, conventions and projection of points and lines in different quadrants of projection system.
- 2. To know and understand the projection of different plane surfaces.
- 3. To impart the knowledge on understanding and drawing of different solid objects in different positions.
- 4. To develop the lateral surfaces of solid objects and its use in sheet metal development

#### **UNIT-I**

# **Orthographic Projection**

10 Hours

Orthographic Projection: Planes of Projection, First angle projection, reference line. Conventions employed for drawing, Projection of points located in first, second, third and fourth quadrants, Projection of Lines (First angle projection only), True and apparent lengths, true and apparent inclinations.

# **UNIT-II**

# **Projection of Plane surfaces**

12 Hours

Projection of plane surface: Triangle, Square, Rectangle, Pentagon, Hexagon and Circle in different positions.

#### UNIT-III

# **Projection of Solids**

16 Hours

Projection of right regular solids: Prisms, Pyramids, Cones, and Cylinders in different positions.

#### **UNIT-IV**

# **Development of Lateral surfaces of solids**

12 Hours

Development of lateral surfaces of: Right regular Prisms, Pyramids, Cylinders and cones and their frustums.

# **Isometric projection and Isometric view**

10 Hours

Isometric scale, Difference between Isometric projection, and isometric view: To draw Isometric views of simple solids and machine components using their orthographic projections.

#### **Course Outcomes:** At the end of the course student will be able to

- 1. Identify a coordinate system in which a point element exists. Draw the orthographic projections of a point and a line.
- 2. Draw the orthographic projections of a plane surface (Triangular, square, rectangular, pentagonal, hexagonal and circular) for a given position using conventional drafting method and Solid Edge software.

- 3. Draw the orthographic projections of a solid object (Pyramid, Prism, Cubic, Conical, cylindrical) for a given position using conventional drafting method and Solid Edge software.
- 4. Draw the development of lateral surfaces of standard solid objects. Draw isometric projection of solid objects individually or in combination using conventional drafting and Solid Edge software.

GREEN BU	JILDING AN	D PLANNING		
Course Code:	CV1004-1	Course Type	PCC	
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03	
Total Teaching Hours	40	CIE + SEE Marks	50+50	

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	Illustrate concepts related to building planning and functions.
2.	Illustrate the needs of principles of planning
3.	Identify suitable factors in adoption of vaastu shastra in building site selection.
4.	Illustrate the organizing principles of vaastu shastra in building design.
5.	Implement standards and provisions in architectural aspects.

# **UNIT-I**

# **Building Planning**

06 Hours

Classification of buildings, Provisions of National Building Codes and Rules, Building bye-laws, open area, Setbacks, FAR terminology, Design and drawing of Building.

# **Design concepts and philosophies**

09 Hours

Preparing sketch plans and working drawings of various types of buildings like residential building, institutional buildings and commercial buildings, site plans, presentation techniques, pictorial drawings, perspective and rendering, model making. Principles of planning- orientation in detailed drawings, Applying of principle of architectural composition (i.e. unity, contrast, etc.)

#### **UNIT-II**

#### **Introduction to Vaastu Shastra**

06 Hours

Importance of Vaastu Shastra in modern times, the significance of each element in Vaastu Shastra, Selection of site based on Vaastu Shastra principles, evaluating land based on direction, shape, and slope. The impact of neighboring structures and environmental factors on site selections.

# Vaastu Shastra Principles for Building Design

09 Hours

Guidelines for designing buildings according to Vaastu Shastra principles, Importance of direction, shape, and placement of rooms and doors. Vaastu Shastra guidelines for colors, materials, and furnishings Vaastu Shastra Principles for Interiors. Applying Vaastu Shastra principles to interiors of a building Principles of room layout, furniture placement, and decor. Vaastu Shastra guidelines for lighting, ventilation, and space utilization Vaastu Shastra Remedies. Integrating Vaastu Shastra principles into modern architecture

#### **UNIT-III**

# Principles of architectural design

**05 Hours** 

Definition of architecture, factors influencing architectural development, characteristics features of style, historic examples, creative principles. Principles of architectural composition— Unity, balance, proportion, scale, rhythm, harmony, Accentuation and contrast.

## **Elements of architecture:**

04 Hours

Functions – Pragmatic utility, circulatory function, symbolic function, Physiological function. Structure – Physical structure, Perceptual structure. Space in architecture Positive and negative space. Aesthetics: Visual perception. Protective: Protection from climate and other elements, architecture a part of the environment, comfort factors.

# Course Outcomes: At the end of the course student will be able to

- **1. Make use of** concepts related to building planning and functions.
- **2. Utilize** principles of planning in design of buildings.
- **3. Identify** and **choose** suitable factors in vaastu shastra to select sites .
- **4. Implementation** of organizing principles of vaastu shastra in building design.
- **5. Implementation** of standards and provisions in architectural aspects.

Teaching Hours/Week (L: T:P)	1:0:2	Credits	02
Total Teaching Hours	13+0+26	CIE + SEE Marks	50+50

#### **Teaching Department: Humanities**

# **Course Objectives:**

- Identify the nuances of Phonetics, Intonation and enhance pronunciation skills Understand Technical Communication along with the barriers and application of effective Interpersonal Communication Skills Enhance basic English grammar and essentials of language skills
- Improve sentence structure with the help of cohesive devices
- 5. Develop spoken and writing skills

#### UNIT - I

#### **Phonetics & Pronunciation**

8 Hours

Introduction to Phonetics; Word Stress, Rhythm, and Intonation; Weak Forms and Strong Forms, Role of IPA in past tense and plural forms of words, Awareness of Different Accent

## **Communication Skills**

8 Hours

Introduction to Communication, Greeting and Introducing, Making Requests, asking for and Giving Permission, Offering Help. Understanding Telephone Communication, Handling Calls, asking for and Giving Information, Telephone Etiquette

#### UNIT - II

# Language Skills

15 Hours

Basic English Grammar, Ability to identify, Analyze, Interpret and Describe the critical ideas, values, and themes through literary works

#### UNIT - III

# **Writing Skills**

8 Hours

Paragraph writing, Refutations, Linkers, Types of Letters

**Course Outcomes:** At the end of the course student will be able to

- Identify the nuances of phonetics, intonation and pronunciation to appreciate and incorporate Received Pronunciation
- Interpret and assess nuances of oral communication skills and the non-verbal communication for professional usage
- Identify, interpret and describe the critical ideas, values, and themes to appreciate literary pieces for its language and social interpretations
- Implement English vocabulary at command and language proficiency in personal and professional life
- Develop effective writing skills for incorporating them in different forms of writing

CONSTITUTION OF INDIA										
Course Code	HU1002-1	Course Type	HSMC							
Teaching Hours/Week (L: T:P)	1:0:0	Credits	0							
<b>Total Teaching Hours</b>	13+0+0	CIE + SEE Marks	50+0							

# **Teaching Department: Humanities**

# **Course Objectives:**

- 1. Inculcate Social and Political consciousness of the Indian Polity.
- 2. Understand their Obligations, Responsibilities, Privileges and Rights, Duties, and the Role that they have to play in deciding the Administrative Machinery of the country.
- 3. Develop National and Patriotic Spirit.
- 4. Understand the nature and character of relations between union and state governments.
- 5. Divulge the students about the statutory institutions and policies.

## UNIT - I

# **Evolution of the Indian Constitution**

6 Hours

1909 Act, 1919 Act, 1935 Govt of India Act, Constituent Assembly: Composition and Functions, Basic structure of Indian Constitution, Fundamental features of the Indian Constitution, Salient Features of Indian Constitution

# UNIT - II

#### **Structure of Government**

6 Hours

Union Government: Legislature; Executive-President, Prime Minister, Council of Ministers; Judiciary, Judicial Review, and activism. State Government: Executive: Governor, Chief Minister, Council of Ministers.

Local Government: Panchayat Raj Institutions, Urban Governance

#### **UNIT - III**

## **Statutory Institutions**

3 Hours

Elections - Election Commission of India, National Human Rights Commission, National Commission for Women.

## **Course Outcomes:** At the end of the course student will be able to

- 1. Analyze the legalities and related issues of drafting, adoption, and enforcement of the Indian Constitution as a fundamental law of the nation and the provisions and privileges of Indian Citizenship
- 2. Understand and judiciously use the fundamental rights, fundamental duties and privileges envisaged in the constitution propagating social harmony and equality and respecting the rights and liberties of other people.
- 3. Contribute in protecting and preserving the sovereignty and integrity of India and have a compassion to all living creatures, uphold sense of brotherhood ness among all citizens of the nation and promote peace and harmony
- 4. Respect the Constitutional Institutions and all noble ideals cherished during Indian struggle for freedom
- 5. Develop a Spirit of belongingness to the country.

ENGINEERING SKILL DEVELOPMENT PRACTICES											
Course Code:	ME1001-1	Course Type:	ESC								
Teaching Hours/Week (L: T: P):	0:0:2	Credits:	01								
Total Teaching Hours	26	CIE + SEE Marks	50+50								

# **Teaching Department: Mechanical Engineering**

# **Course Objectives:**

Students belonging to all branches of Engineering are made to learn certain fundamental topics related to mechanical engineering so that they will have a minimum understanding of mechanical systems, equipment and process.

- 1. Prepare simple fitting and carpentry models by using workshop hand tools. Fabricate a simple metallic frame using drilling machine, angle grinder, chop saw machine and welding.
- 2. Prepare carpentry models using carpentry tools and sheet metal models of simple solids using soldering tools.
- 3. Understand how to assemble/ disassemble machine parts such as machine vice and deadbolt door lock on a wooden block.
- 4. Understand the basic principles of power transmission such as calculation of velocity ratio of belt drive along with theoretical and actual speed of driven shaft of stepped cone pulley.
- 5. Understand how to assemble automatic Linear actuator using Power tools/ power tool kit

### **UNIT-I**

Fitting Shop/ Carpentry Shop/ Metal fabrication processes	10
	Hours

Fitting: Study and use of engineering steel rule, height gauge, caliper, micrometer, files, chisels, hacksaw, hammers, drill bit, taps etc. Models: Preparation of fitting models by making use of filing, sawing and chipping. (1 Model among square fitting, V fitting and dovetail fitting joints).

Carpentry: Study the use of carpentry tools and joints. Model: 1 model (Dovetail Joint)

Metal Fabrication Processes

Fabrication of simple frames using a magnetic drilling machine, chop saw machine, angle grinder with slider, Jig saw machine and MIG/ TIG welding processes

### **UNIT-II**

# **Plumbing - Pipes and Pipe Fitting**

10 Hours

Selection and use of different pipes like GI Pipes, Plastic pipes, PVC pipes, HDPE pipes, Cast iron pipes, Plumbing symbols / accessories; Bends, Elbows, Sockets, Tees, Unions, Pipe cutting, Pipe bending, Pipe Threading, Pipe joints, Pipe fitting, Alignment of pipes, Branching of pipes, Safety precautions, relevant IS codes are to be taught.

# List of Experiments:

- 1. Identification of type of pipe and type of plumbing accessories
- 2. Development of pipe fitting as per drawing
- 3. Alignment of pipes with level on the wall surface
- 4. Pipe threading and preparing pipe joints as per drawings

# Sheet metal Work and Soldering/ Electrical Wiring

Study the development of surfaces of simple solids like prism, cylinder and cone.

Models: Preparation of two sheet metal models (square/ rectangular prism and cylinder).

Electrical wiring exercises – Electrical circuit of one-way and two-way switch operation.

#### UNIT-III

# **Demonstration/ Active learning**

06

Hours

Calculation of speed/velocity ratio of a V belt of a drilling machine

Assembly/ Disassembly of a machine part such as the machine vice/ tailstock of a lathe.

Assembly and actuation of a XY slide/ Linear actuator.

# Course Outcomes: At the end of the course student will be able to

- 1. Prepare fitting models/ metallic frame by using required tools and operations.
- 2. Draw the development of sheet metal models and prepare sheet metal models using the required tools and soldering operation. Construct the necessary circuit and to

operate a one-way/ two- way switch. Identify the required components and prepare a plumbing joint as per the given drawing.

# **Teaching Department: Mathematics**

<b>C</b>	$\Delta \mathbf{L}$	•4•
Course	UD.	jectives:

- 1. Understand the use of the basic operators, some built-in functions of MATLAB. 2. Create and work with arrays
- 3. Create and display simple plots
- 4. Solve by Symbolic and Numerical computation techniques

# **List of Experiments**

- 1 Introduction to MATLAB: Basic Operators: Arithmetic, Logical and Relational operators. Elementary math functions such as algebraic, trigonometric, logarithmic, exponential functions, Conditions and Loops.
- 2 Symbolic Computation, plotting curves, surfaces and vector fields.
- 3 Computation of
  - (a) eigenvalues and eigenvectors of a square matrix;
  - (b) largest eigenvalue and the corresponding eigenvector of a square matrix;
  - (c) rank of a square matrix
- 4 Solution of system of linear equations by Gauss elimination method
- 5 Solution of system of linear equations by Gauss-Seidel method
- 6 Taylor's/ Maclaurin's series expansion of a function of single variable.
- 7 Computation of partial derivatives and Jacobians
- 8 Evaluation of double/triple integrals with constant/variable limits.
- 9 Computation of angle between
  - (a) radius vector and tangent;
  - (b) two curves
- 10 Solution (with solution curve) of first order ordinary differential equation
- 11 Solution (with solution curve) of second and higher order linear differential equation with constant coefficients
- 12 Compute the roots of algebraic or transcendental equation using Regula-Falsi and Newton Raphson's Method.

# **Course Outcomes:** At the end of the course student will be able to

1. Write and compile simple MATLAB codes. Implement basic operators and conditions and loops effectively.

- 2. Construct MATLAB programs gradually for the mathematics concept they are studying in theory.
- 3. Appreciate the pictorial representation of the mathematics concept.

# **HUMANITIES**

Holistic education is not only about teaching the basic subjects, but it is more about redefining the way a student should be taught. The purpose of holistic language teaching is the development of the learners' ability to handle both their language oral skills as well as maximizing their life skills. The department contributes to educational life and work spaces that are creative and meaningful. Multidisciplinary and holistic learning is an ancient method used in Indian education system as well as the other parts of the world. This is the reason that such type of education system was advocated by scholars like Kautilya, Banabhatta, Plato, and Aristotle among many others. Holistic approach is essentially a student centered strategy rather than a teacher centered one.

Holistic education through courses allied to Humanities is created within the inclusive connections of social and human experience. A curriculum built around such stages is considered holistic if they involve the practices that integrates language acquisition and fills multiple cognitive demands in interlocking activities that spiral learning. Through the applied learning style of a person--mind, body and spirit student will learn more effectively the nuances of language, responsibilities towards social fabrics and ethics.

The approach strives to make a learner construct his own understanding of the text he/she interacts with and converses with others according his understanding. Intensive experiential and group sessions, a co-created learning ambience and hands-on engagement through real-life cases, field trips and internships to make learning exciting, rigorous and transformative. As a part of the holistic approach and its philosophy, a student is educated beyond core academics providing him/her virtuous and holistic education. This helps the students to discover their individuality and comprehend the significance of life purposefully, creatively, and morally in a complex world. Krishnamurti writes If the unity of life and the oneness of its purpose could be clearly taught to the young, how much brighter would be our hopes for the future! (Krishnamurti, J. 1974).

# **MATHEMATICS**

## **INDIAN MATHEMATICIANS**

It is essential to know about the ancient, medieval and modern time Indian mathematicians and their contribution to Science and Mathematics. Ancient Indian mathematicians have contributed immensely to the field of mathematics. The invention of zero is attributed to Indians and this contribution outweighs all other made by any other nation since it is the basis of the decimal number system, without which no advancement in mathematics would have been possible. The number system used today was invented by Indians and it is still called Indo-Arabic numerals because Indians invented them and the Arab merchants took them to the western world.

Here we are introducing some of the important Indian mathematicians from ancient times.

**Aryabhata:** (500 A. D.) - Studied at the University of Nalanda, which was considered as a great centre of learning. Aryabhata was a great Indian mathematician. He gave the value of " $\pi$ " as 3.1416, claiming for the 1<sup>st</sup> time, that it was approximation. Aryabhata also dealt with other aspects of mathematics and Astronomical calculations, namely Geometry, Mensuration,

<u>Square root</u>, <u>Cube root</u>, <u>Progression</u> and <u>Celestial sphere</u>. He presented a method to solve an intermediate equation of certain type that are important in astronomy and computer science.

**Bhaskara:** (1100 A. D.) - was a great Mathematician and Astrologer. He was the first Mathematician to declare confidently that any term divided by ZERO is infinity and the sum of any term and infinity is infinity. His concept of "Tatkalikagati", which means instantaneous motion, used by astronomers to determine the motion of the planet accurately brought credit to him. He explained the solutions of quadratic and cubic equations. He stated the Rolle's theorems in analysis, the mean value theorem.

**Srinivas Ramanujan** was an Indian Mathematician who made significant contributions to mathematical analysis, Number theory and continued fractions. He made many important contributions in the field of mathematics with his wonderful and unique knowledge. That's why his birthday is celebrated as Mathematics Day.

# **PHYSICS**

The ancient world had considered Physical Sciences, Chemical Sciences, Earth Sciences, Biological Sciences, Mathematical Sciences etc. as study of nature, which were all studied under the banner of Philosophy. Even today, the philosophers are studying Metaphysics which connects physical attributes to mind. Physics is a branch of science which deals with the study of matter and energy. The Physical Science was a matter of interest for all the civilizations including Vedic era of India dating back to over 3000 years. The physical science in ancient India was majorly restricted to Astronomy and Astrology. It was **Kaṇāda** (600 B.C.) who presented holistic approach of physics, by blending science, philosophy and religion through 'Vaisesika Sutra'. Their essence is the atomic theory of matter. He gave the name 'Paramanu' (Atom), to be the indivisible entity of matter. The idea of chemical change was also put forward by Kanada. Bharadwaja is credited with teaching missile technology. Aryabhata (500 A.D.) was a great astronomer. He was the first to state that the earth is round and it rotates on its own axis, creating day and night. He declared that the moon is dark and shines only because of sunlight. Aryabhatta contributed greatly to the field of science particularly astronomy. Varaha mihira (500 A.D.) studied astrology and astronomy and declared that the earth was spherical. He also proposed that the moon and planets are lustrous not because of their own light but due to sunlight. Bhaskra (1100 A. D.) was a great scientist his concept of "Tatkalikagati", which means instantaneous motion, used by astronomers to determine the motion of the planet accurately brought credit to him. Brahmagupta (598 A.D.) calculated the instantaneous motion of a planet, gave correct equations for parallax, and some information related to the computation of eclipses and is widely regarded as one of the most accomplished of the ancient Indian astronomers.

"If you wish to make an apple pie from scratch, you must first invent the universe." So said astronomer Carl Sagan in an episode of his landmark television series, Cosmos. Embedded in Sagan's memorable quip is a certain holistic understanding of the universe — a notion that the existence of any one thing is intimately tied to the existence of everything else. There are no apple pies without apples; there are no apples without the proper climate for growing apple trees; there is no proper climate for growing apple trees without a planet on which the apple trees can grow

— and so on, all the way back to the Big Bang.Pythagoras and his followers held mathematics in an almost holy regard, and they saw numbers as a basic form of matter. According to their view, all things had numbers, and the objects of the universe — including human societies — were arranged in harmonious mathematical relationships with one another.

All sciences were originated from philosophy. Physics was called natural philosophy until the 19th century, but once it was proven to be correct it was no longer philosophy and became a science. Physics is the science of the natural world, more specifically dealing with the matter, energy, spacetime, and fundamental forces that govern the physical world. In physics we study a wide range of physical phenomena from subatomic particles to large galaxies of the material universe, and use empirical data and mathematics to find results and conclusions. Physics is also deeply concerned with arriving at knowledge about the ultimate nature of reality. Since we cannot know whether we have discovered everything which would affect our theories of the universe, all such theories are perpetually subject to modification or change. Mathematics is a language and a tool that we use in physics to explain the universe. Quantum physics is a mathematical description that rules the tiny world of atoms and subatomic particles in our universe. Without quantum physics, much of the information technology that we rely on, from microcircuits to lasers, would not exist. Today many scientists argue that metaphysics plays an important role in quantum mechanics at a deeper level; the nature of reality is all mathematical. This could be an example of how metaphysical assumptions can get in the way of our understanding the paradoxical nature of quantum mechanics. But even when quantum mechanics appears a mystical science of metaphysics, it is not metaphysics but productive science.

Thus, the Physics though has many branches and uses many other branches of science and philosophy, in the past and the present, its aim is to understand the whole universe which is nothing but matter and energy which is seen or unseen.

# **CHEMISTRY**

# **ANCIENT SEERS OF INDIA – CHEMISTRY**

In ancient India, chemistry was called **Rasayan Shastra**, **Rasa-Vidya**, **Rasatantra and Rasakriya** all of which roughly mean '*Science of Liquids*'. There also existed chemical laboratories which were called **Rasakriya-nagaram/Rasakriya-shala**, which literally mean '*School where liquids are activated*'. Rigveda (earlier than 1500 BCE) mentions many fermented drinks and methods of fermentation, apart from various metals. Soma juice from the stems of the soma plant was considered a divine drink. The Vedic Indians were acquainted with the art of dyeing with certain natural vegetable colouring matters. A type of pottery, now known as 'Painted Grey Ware', is also associated with the Vedic period.

Ancient chemistry in India grew out of the early efforts to develop an elixir; to turn base metals into gold and on metallurgy. Chemical techniques in India can be traced back all the way to the Indus valley or Harappan civilisation (3rd millennium BCE). Pre-Harappan Indians were acquainted with the art of making baked or burnt clay pottery as well as painting the same with two or more colours (by addition of iron oxide, manganese oxide, etc.). Kautilya's Arthashaastra (3rd or 4th century BCE) has a lot of information on prevailing chemical practices. Apart from mines and minerals, it discusses the details of precious stones (pearl, ruby, beryl, etc.); preparation of fermented juices (sugarcane, jaggery, honey, jambu, jackfruit, mango, etc.) and oil extraction.

It is said that **Maharshi Kanada** was the first to propound that the *Parmanu* (atom) was an indestructible particle of matter and that Universe is made up of *Kana*. When matter is divided and sudivided, we reach a stage beyond which no division is possible, the undivisible element of matter is *Parmanu*. Kanada explained that this indivisible, indestructible y cannot be sensed through any human organ.

**Nagarjuna** (931 A.D.) from Somnath in Gujarat was a chemist/alchemist, who concentrated his efforts in transforming the base metals into gold. His reputation was such that people believed Nagarjuna to be in communion with gods and goddesses who had blessed him with the power of changing base

metals into gold and extracting the 'elixir of life'.

**Prafulla Chandra Ray** (1861-1944), an Indian chemist, is often referred to as the Father of Chemistry in India. He received his BS in 1882 and his PhD in 1887 from University of Edinburgh. In 1896, he announced a major discovery of a new compound, mercurous nitrite.

Today's Science and Technology has been greatly inspired by the contributions of these wise seers. Indians have continued to show their global impact in the Field of Science. In the 21<sup>st</sup> century, biochemist **Har Gobind Khorana** won the Nobel Prize (1968) for demonstrating how the nucleotides in nucleic acids control the synthesis of proteins.

Thus, the seers of ancient India have contributed significantly in the development of Modern Chemistry.

# **BIOTECHNOLOGY**

# **Biology for Engineers**

Science deals with matter. It is based on starting from scratch with what a human can observe, test, and rationalize. Ancient sages have worked hard to be seen as the only reliable providers of knowledge to the world. In 1875, the Vymaanika Shaastra, a 4th Century BC text written by Sage Bharadwaj was discovered in a temple in India. It contains 3000 shlokas in 8 chapters which was physically delivered by the ancient Hindu Sage Bharadwaj. The book greatly deals with the operation of ancient vimanas and included information on steering, precautions for long flights, protection of the airships from storms and lightning and how to switch the drive of solar energy or some other form of energy. One of the chapter will reveal the secrets of constructing aeroplanes that cannot be broken or cut, that is indestructible, that is fire resistant. It also deals with the secret of making planes motionless and invisible. It also describes how to defeat the enemy planes etc. as per the Sage Bharadwaj the vimanas were classifies as per the Yugas. During the period of Krita Yuga, Dharma was establishes firmly. The pushpak Vimana which was used by Ravan was an Aerial vehicle. He used this vehicle to kidnap Sita from jungle and took him to his Kingdom Srilanka. Ramayana was during the Treta Yug in which the Vimanas were highly discovered. During this period "Laghima" gave them the power to lighten their vehicle do they can travel freely in the air.

# **COMPUTER AND INFORMATION SCIENCE ENGINEERING**

The Indians (**Aryabhata**, 476 BC - 550 BC) contributed **Zero (0)** to the number system. So that numeric system and computing world found an ease in solving numerical problems using computer programs.

Acharya **Pingala** was an ancient Indian mathematician who lived around 300 BCE. He wrote the Chandaḥśāstra, where he analysed **Sanskrit poetry mathematically**. It also contained the first known explanations of **digit zero**, **binary numbers**, **Fibonacci numbers and Pascal's triangle**.

**Baudhayana** (8th century BCE) composed the Baudhayana Sulba Sutra, which contains examples of Pythagorean triples, such as: (3,4,5), (5,12,13), (8,15,17), (7,24,25) and (12,35,37) as well as a statement of the Pythagorean theorem for the sides of a square: "The rope which is stretched across the diagonal of a square produces an area double the size of the original square."

In Indian astronomy, the study of **trigonometric functions** flourished in the Gupta period, especially due to **Aryabhata (sixth century CE)**, who discovered the **sine function**.

Quadratic equation of the form  $ax^2 + bx + c = 0$ ,  $a \ne 0$  and is given by  $x = (-b \pm \sqrt{b^2 - 4ac})$  / 2a. was discovered by **Sridharacharya** in the 11th century.

The largest numbers the Greeks and Romans used were 106. In 5000 BC **Indians used numbers** as big as 10<sup>53</sup> (10 to the power 53) with specific names. The largest used number today is **Tera** 10<sup>12</sup>.

**Kaṭapayadi numerical notation** is an ancient Indian system to depict letters to numbers for easy remembrance of numbers as **words or verses**.

For example:  $\Box$ (Ka)=1  $\Box$ (Ka)=2  $\Box$ (Ga)=3  $\Box$ (Ga)=4  $\Box$ (Gnya)=5  $\Box$ (Cha)=6  $\Box$ (Cha)=7  $\Box$ (Ja)=8  $\Box$ (Ja)=9  $\Box$ (Nya)=0. The modern **Hasing technique in computing system** which is resembling was then being used in the **Indian Katapayadi system**. For example, the hashing number based on Katapayadi system would be as follows for '**Gurudev**'

Gu=Ga(is the consonant)=3, Ru=Ra(is the consonant)=2, De=Da(is the consonant)=8 Va=Va(is the consonant)=4, So Gurudeva=4823.

In the recent decades, following are the few of the major contributors to the computing world:

- 1. In 1996 the USB port invented by the **Ajay Bhatt**, an Indian at Intel Oregon which involved low level **programs delt with embedded C Language** to perform flexible IO transfer and opened up an area to use plug-and-play devices efficiently.
- 2. The Pentium chip invented by Vinod Dham, that made C compiler to speed up the program execution and do well with GUI applications (both System and User Level) that are wiritten in C language.
- 3. **Amit Singhal** is an Indian who rewrote (search engine in 2001) the **google algorithm** (C language coding embedded with Assembly Language service routins in Windows and Unix/Linux). Then on the Google processes over 40,000 search queries every second on average which translates to over **3.5 billion searches per day** and **1.2 trillion searches per year** worldwide.

Few of the contribution as Auther of CP and Educators of C language:

- 1. **Yashavant Kanetkar** is an Indian computer science author, known for his varieties of C Programming books.
- 2. E. Balagurusamy: An Computer scientist known for Programming in ANSI C

# **ELECTRONICS AND COMMUNICATION ENGINEERING**

The idea of a holistic approach to engineering design and education has been envisioned to meet the perceived and emerging needs for innovation in the 21st century. Many engineering educators, practicing engineers and engineering students have already recognized the gaps and areas of potential improvements in the knowledge acquisition process implemented in current engineering degree programs when compared to current societal and technological issues and developments.

Society and humanity have progressed drastically over the past few generations. Engineers as a network of professional problem solvers have been heavily involved in these global communities and the engineering profession is evolving from one that focuses on targeted, isolated issues, to one that embraces challenges that incorporate physical, economic, environmental, and humanitarian aspects.

Currently, engineering students are required to take classes on ethics, liberal studies and technology and society courses, however engineering students are not prefaced with the importance of rounding out their education with these topics, and while social issues are discussed, they are not related to engineering specifically. That being said, explicitly linking the technical aspects of engineering to society is paramount in training effective problem solvers for the 21st century. With some exposure to multi-disciplinary, inter-disciplinary and trans-disciplinary approaches to engineering and design, students will be better prepared for their future careers in industry or research fields.

The functional requirements for the perceived solution were determined by the expected outcomes and what students should take away after experiencing the new educational product. Some of them are:

• students will be inspired and driven to seek opportunities in engineering for environmental, social, medical, and human development/poverty issues.

- students will be able to identify the issues that are emerging from new technology, how to mitigate the negative aspects and reduce the amount of impact, while leveraging the positive outcomes.
- students will have respect and knowledge of the importance of ethics and policy matters in the field of engineering and be able to determine between unethical and an ethical situation in a proactive manner.

The courses should overcome the challenges of the current engineering educational system. Approaching the degree from a holistic perspective. The integrated system that fosters collaboration among faculty and students. A new organizational and pedagogical model, which emphasizes knowledge integration and interweaves thematic content threads throughout the curriculum should be proposed.

- Foundations thread (math and science) Key mathematical concepts lay the foundation for understanding the anchoring concepts in courses throughout the ECE curriculum. The foundations thread unpacks mathematics and physics concepts to help students learn fundamentals in ECE topics like circuits, signals and systems, and electromagnetics. The foundations thread champion spearheads the collaboration between the math and ECE departments to introduce and promote the value and utility of mathematics in ECE courses, as well as the importance of mathematical thinking.
- Creativity thread (research, design, and optimization tools) The creativity thread is intended
  to integrate research and design throughout the undergraduate experience. By showing
  the impact of research, students will see the practical applications and potential
  breakthroughs of fundamental ECE concepts. Likewise, exposing students to design at
  every level of the undergraduate experience allows them to experience the excitement of
  engineering by applying their foundational knowledge to a tangible product.
- Professional formation thread (communications, cultural adaptability, ethics, leadership, and teamwork) Partnering with faculty and industry leaders to ensure students develop professional skills meaningfully and effectively to enhance student-industry interactions.

# **ELECTRICAL AND ELECTRONICS ENGINEERING**

Agastya Samshita available at Prince's Library of Ujjain in India, dates back to the first millennium BC, contains a detailed description construction of an electric battery/cell along with way to utilize the battery to 'split' water into its constituent gasses. The method of generating electricity using modern battery cell resembles Agastya's method. The materials used by Sage Agastya for generating electricity were an earthen pot, copper plate, copper sulphate, wet saw dust, zinc amalgam. As quoted in Agastya Samhita the open circuit voltage and short circuit current of the prepared cell are 1.138 volts and 23 mA respectively. He articulates 100 earthen pots on water, has the power to change the form of water to oxygen and hydrogen. If hydrogen is contained in an air tight cloth, it can be used in aerodynamics, i.e. it will fly in air. In an iron vessel and in a strong acidic medium, gold or silver nitrate covers copper with a layer of gold or silver. The copper that is covered by gold is called Shatakumbha or artificial gold.

Rao Saheb Krishnaji Vajhe, an engineer from Pune while reading books related to science found the pages of Agastya Samhita with Damodar Tryambak Joshi of Ujjain. Dr. M. C. Sahastrabuddhe, the Head of the Sanskrit Department in Nagpur, when reading Agastya Samhita found the similarity of it with of Daniel Cell. He requested P.P. Hole, the Professor of Engineering at Nagpur to investigate on the same.

On the basis of the descriptions in Agastya Samhita Mr. Hole and his friend started preparing the apparatus for the experiment. While preparing the set up they could not understand the meaning of shikhigreeva and while checking the Sanskrit dictionary, they understood that it meant the neck of a peacock. They went to Maharaja Park and asked the chief when a peacock would die. The chief was very angry and asked them to give in an application. After few days during a conversation with an Ayurveda expert he confirmed that shikhigreeva is copper sulphate, which solved their problem. Thus, a cell was formed and it had an open circuit voltage of 1.38 volts and short circuit current of 23 milli amperes. The results of the experimentation were communicated to Dr. M.C. Sahastryabuddhe. It was exhibited fourth general meeting at the Swadeshi Vigyan Sanshodhan

Sanstha, Nagpur on August 7, 1990 to the scholars. It was concluded that the description was of an electric cell

On the basis on Agastya Samhita and other scriptures, Rao Saheb Vajhe, who spent his life in rummaging the Indian scientific scriptures, gave different names to electricity. The six ancient terminologies for electricity are:

- Tadit—produced by friction from leather or silk,
- Saudamini—produced by friction from gems or glass,
- Vidyut— from clouds or steam,
- Shatakoti alias Shatakumbhi—produced from a battery of hundreds of cells,
- · Hradini—obtained from storage cells,
- Ashani—the one emanating from a magnetic rod.

# **MECHANICAL ENGINEERING**

Mechanical engineering is one of the oldest disciplines of engineering, which requires the knowledge of mathematics, materials, physics and other engineering technologies. It is concerned with materials, processes and machines and requires the concepts of forces, moments, energy, entropy, work etc. The developments that are visible in all spheres of life have connection to mechanical engineering. Engineering has made a significant contribution in the development of civilizations and contribution of mechanical engineering in areas like construction of large scale structures including for irrigation, architecture, military etc. is significant. Difficult problems of the society have been solved using simple concepts of mechanical engineering, say for eg. use of lever principle to move heavy objects. In fact, mechanical engineering made a significant contribution to the first cycle of industrial revolution, i.e., industrial revolution 1.0 during the 18<sup>th</sup> century. James Watt is often called the 'Father of Mechanical Engineering', as his invention of steam engine led to significant developments during the industrial revolution and beyond. The earliest computers were mechanical devices with electronics.

Significant contributions have been made during the Vedic ages and the first ever mechanical device that was invented was wheel and potter. Surmyam Suiramiva identified metals like Fe, Cu, Ag, Au etc., during the Vedic times. People knew about materials and material processing during those times and identified terminologies for the same in Sanskrit and produced gold and silver coins.

Seers like Tritala, Jalayan, Karaa, Vayurathaa and Vidyutrathaa discovered about aerodynamics during Rig Veda period, much before Wright Brothers discovered about aero planes. Computational Fluid Dynamics (CFD) analysis, which we are talking about today for different analysis, was there in the Vimana Shastra slokas.

Mechanical and manufacturing technology of ancient India ensured processing of natural products and their transformation into goods of trade, commerce and export.

Many scientists have made significant contributions to this domain. Leonardo da Vinci (16<sup>th</sup> century) studied and designed many mechanical systems that were related to transportation and warfare. In 17<sup>th</sup> century, Isaac Newton contributed the Laws of Motion used in several applications. Rudolf Diesel (18<sup>th</sup> century) was a German inventor, who created the first successful diesel engine and today diesel engines play a very important role in the transport and power sector in the world. Carl Frederich Benz (18<sup>th</sup> century) was a German automotive engineer, who developed the first practical automobile.

Mechanical engineering has evolved over the years and today the advent of computer and IT tools has facilitated better mechanical engineering in terms of design, analysis, and manufacturing. A mechanical engineer needs to work in multiple domains and needs to possess multiple skills like design, redesign, analyze, test, manufacture etc. It has been one of the founding disciplines of engineering and has contributed and will keep contributing to the growth and developments in this physical world.

# **CIVIL ENGINEERING**

Indian civilization was the oldest civilization in the world and has a strong tradition of science and technology. It was the land of sages, seers, scholars, and scientists. Hinduism is a knowledge-based civilization, the Vedic texts should not be ignored dismissed as mythologies or as the work of imagination or just containing some moral stories. The Veda means knowledge and they contain relevant knowledge otherwise these texts would not have survived the millennia years of the historic storm. Let us know some of the great work done in ancient times.

Ancient India not only practised scientific methods of design and construction but also documented them for future generations. Here are some tips given by ancient sages on selection of site and construction

(1) Vishwakarma Vastu Shastra- Vishwakarma explains the first point of construction in the ancient
book Vastu Shastra – '00000 00000 000000 000000 000000
$\square\square\square\square\square\square\square\square\square\square'$ , This means that before construction one should test the land. Vishwakarma
further says that construction should not be done on the land which is very mountainous or on
land with large cracks.

Vastu shastra literally "science of architecture" are texts on the traditional Indian system of architecture. These texts describe principles of design, layout, measurements, ground preparation, space arrangement, and spatial geometry. The designs aim to integrate architecture with nature, the relative functions of various parts of the structure, and ancient beliefs utilising geometric patterns (yantra), symmetry, and directional alignments.

- (2) Kashyap Shilpa (Craft) In this ancient book, Kashyap Rishi has said that the foundation should be dug until water is seen because this way you would ensure that you have reached the rock level and the foundation would be strong.
- (3) Bhrigu Samhita In this scripture saint Bhrigu says that before buying land, one should test it for form, colour, juice, smell and touch. Rishi Bhrigu also explains its methods in his book.

Ancient cities of India found on the basis of archaeological discoveries:

- Rama was the world's first king to build a bridge across the sea. But he did not do it on his own. He sought the help of a great engineer called Nala according to Valmiki Ramayana. Any wise man will seek local knowledge when he ventures into new places. Nala knew the shallow areas across the sea in and around Tamilnadu. American space agency NASA also confirmed that there was a bridge through the satellite pictures. Any wise engineer will use such naturally elevated areas instead of deep waters to build a bridge.
- Bageeratha changed the course of the mighty river Ganges. The vast forest areas of modern Bihar, Uttar Pradesh, and West Bengal were made into fertile lands by his marvelous engineering feat. In those days very few people lived in those jungles. Puranas say that Bageeratha did penance for several thousand years to do this that too 'standing in one foot'. This is a phrase Indians use very often. Even the great Tamil poet Tiruvalluvar uses the simile of Stork that stands in one foot to catch a fish. This is the hidden language to say that he tried for a very long time with focused attention.
- Vedic Saint Agasthya discovered the land route to South India via Vindhyas. The Puranas
  say that he "subdued the arrogance of the hills", this is hidden language. Till Agastya's this
  great discovery kings and travellers used only sea routes. Since they knew the secret of
  monsoon winds they can travel to West Bengal or Maharashtra from Sri Lanka in a few
  months' time.
- Uparichara Vasu, an ancient king made mountain passes for the benefit of land travellers. He was a Vasu king ruling over the Chedi kingdom. Mahabharata says that he kicked the Kolahal Mountain which was blocking the flow of the Shaktimati River. This is a hidden language to say that he diverted the river for irrigation by cutting the hills.
- In short Bageerathan, Agastya, and Uparichara Vasu are the earliest engineers who built dams across the rivers. But unlike modern engineers, they did not use cement or mortar but they used the hills themselves. To avoid the force they made checks and balances. They use a hidden language saying that Shiva bore the force when Ganga came down from heaven.

- Parasuraman retrieved a lot of lands and gave it to Indians. A Pandya king called Nilam Tharu Vil Nediyon built sea walls to prevent the sea from invading the land.
- Balraman always travelled with an axe to clear the forests and make them cultivable. He
  was a great agriculturist. When Krishna spent most of his time in politics, his brother
  Balarama did constructive work.
- engineering. Found in archaeological excavations even the ruins prove that this town was well settled and its buildings and roads all were made using symmetry and geometrical measurements. The roads found in this city were straight and were made from east to west and north to south and surprisingly they were at an angle of 90 degrees from each other. Buildings were also constructed in proportion. The intersection of the corners, the heights of the walls was equal. The city had public buildings, gardens, a restaurant, a large public bath as well as residential buildings. There was a provision for bathroom, living room etc in the residential buildings. The public buildings were 11.82m long, 7.01m wide and 2.44m high, and there were two streams of water. The building material and bricks of the walls were coated with a substance on which there was no effect of water. Archaeological research shows that people living here were well-versed in the construction techniques.
- Indus Valley Cities such as Harappa, Mohanjadaro, Lothal, Dholavira, Kalibangan need no new interpretations. The well-laid cities with uniform brick structures, Great Bath, most hygienic drainage systems, grain storage barns, and wells are all already well known to the world.
- Dwarka, also known as Lord Krishna's city, also narrates a similar story. Dr S R Rao discovered Dwarka in the archaeological excavation and found that the ancient city (Dwarka Nagar) was well built and settled. There was a wall around the city. The stones used for the construction of buildings did not erode despite the fact that the city was very close to the sea. Two-storey buildings, roads and water system are also found in the city. Copper, bronze and some alloys with zinc mixed up to 34 percent have also been found during the excavation. The size of columns, windows, etc reveals that they were designed with a complete mathematical precision.

- South Indian Tamil saint Appar always travelled with a pickaxe to clear the bushes from the temple towers. He simply followed Balarama. Great Chola king Karikalan built a dam across river Cauvery in Kal Anai. The Grand Anicut was an engineering wonder of ancient Tamils. It was built around the 1st century AD. Big temples of India, the number of which runs into thousands, stand as monumental proof for the engineering skills of Indians. Mamallapuram and other Pallavacave temples are well-known milestones in Indian architecture.
- The Group of Monuments at Hampi are also recognized as a UNESCO World Heritage Site.
   The Vittala temple—the stone chariot is the most iconic symbol of Hampi. The Virupaksha
   Temple at Hampi was built in the seventh century by the Chalukya rulers.

Virupaksha and Vithala Temple in Hampi

# BASIC SCIENCE COURSES

VECTOR CALCULUS & COMPLEX FUNCTIONS										
Course Code:	MA2003-1	Course Type:	BSC							
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	03							
Total Teaching Hours:	40+0+0	CIE + SEE Marks:	50+50							
Prerequisite	MA1005-1									

# **Teaching Department: Mathematics**

# **Course Objectives:**

- **1.** To apply operators like gradient, divergence and curl to both scalar as well as vector functions.
- 2. To evaluate surface and volume integrals in terms of line integrals using various integral theorems.
- **3.** Determine analyticity of a function and find the derivative of a function. Evaluate an integral using Cauchy's integral formula.
- **4.** Compute the residue of a function and use the residue theory to evaluate a contour integral or an integral over the real line.
- **5.** Find Fourier series of a function, obtain the half range series and harmonics. Find the Fourier transform and inverse Fourier transform of a function.

### **UNIT-I**

Vector Calculus 15 Hours

Vector algebra (review), vector differentiation-gradient, directional derivatives, divergence, curl, Laplacian, solenoidal and irrotational vectors. Curvilinear, spherical and cylindrical coordinates.

Vector integration: Line, surface & volume integrals. Green's theorem, Gauss divergence theorem, Stoke's theorem and applications.

### **UNIT-II**

# **Theory of Complex Variables**

15 Hours

Functions of complex variables, Cauchy Riemann equations, properties of analytic functions, conformal mapping, bilinear transformations.

Line integrals in complex plane, Cauchy's theorem, Cauchy's integral formula. Power series-Taylor's and Laurent's series. Residues, Cauchy's residue theorem. Evaluation of standard real integrals using contour integration.

#### **UNIT-III**

### **Fourier Series and Fourier Transforms**

10 Hours

Periodic functions, Euler's formulae, Fourier series of odd and even functions, functions with arbitrary period, half range series, harmonic analysis. Fourier integral theorem, Fourier transforms, inverse Fourier transform, convolution theorem and Parseval's identity. Fourier sine and Fourier cosine transforms, inverse Fourier sine and inverse Fourier cosine transforms.

<b>Course Outcomes:</b> At the end of the course student will be able to
--

- **1.** Solve the vector functions and their derivatives for engineering applications.
- **2.** Demonstrate the applications of Gauss divergence and Stoke's theorem.
- **3.** Recognize analytic functions, differentiate and integrate complex functions.
- **4.** Compute the residue of a function and use the residue theorem to evaluate a contour integral over the real line.
- 5. Understand and appreciate the concepts of Fourier series. Find the Fourier transform and the inverse Fourier transform of a function and will be able to apply these concepts in his technical subjects.

PROBABILITY THEORY AND COMPUTATIONAL MATHEMATICS						
Course Code:	MA2009-1	Course Type:	BSC			
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	03			
<b>Total Teaching Hours:</b>	40+0+0	CIE + SEE Marks:	50+50			
Prerequisites	MA1001-1					

# **Teaching Department: Mathematics**

# **Course Objectives:**

- Understand the concept of probabilistic models for situation involving chance effect.
   Study different types of probability distributions.
- **3.** Apply interpolation technique in real life problems
- **4.** Apply numerical differentiation and integration methods, where the function is a
- **5.** Complicated expression or given in terms of tabular values or not possible to evaluate

# **UNIT-I**

# **Probability Theory**

15 Hours

Finite sample space, probability and conditional probability and independence, Bayes' theorem. One dimensional random variable: discrete and continuous random variable, probability functions, cumulative distribution function, expectation and variance. Two Distributions: Binomial, Poisson, Normal and exponential distributions

#### **UNIT-II**

# **Finite Differences and Interpolation**

15 Hours

Finite differences: forward, backward and central difference operators, Newton-Gregory forward and backward interpolation formulae, Lagrange's interpolation formula. Newton's divided difference interpolation formula.

Numerical Differentiation: Numerical differentiation using Newton's forward & backward formulae.

Numerical integration: General quadrature formula, Trapezoidal rule, Simpson's one third rule, Simpson's three eighth rule.

#### **UNIT-III**

#### Numerical Methods

10 Hours

Solution of algebraic and transcendental equations: Regula falsi Method and Newton Raphson Method.

Numerical solution of ordinary differential equations: Taylor's series method, modified Euler's method and 4th order Runge –Kutta method, Predictor-Corrector methods

Numerical solution of partial differential equations: Solution of Laplace and Poisson equations by standard five point formulae, solution of heat and wave equations.

# Course Outcomes: At the end of the course student will be able to

**1.** Demonstrate and appreciate probabilistic models for situations involving chance effect.

- 2. Illustrate the applications different types of distributions for engineering problems.
- **3.** Using finite differences and interpolation technique in solving real life problems
- **4.** Understand the numerical differentiation and integration methods and be able to apply these methods to solve engineering problems
- **5.** Apply numerical methods to solve partial differential equations.

# BRIDGE COURSES FOR LATERAL ENTRY STUDENTS

DDINGE CALIDSE		ADIACE TRANSFORMS
DRIDGE COOKSE -	CALCULUS AIND LA	APLACE TRANSFORMS

DINDGE COOKSE CAL	COLOS AILD	LAI LACE INAISION	1419	
Course Code:	MA1011-1	Course Type:	MNC	
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	00	
Total Teaching Hours:	40+0+0+0	CIE + SEE Marks:	100+0	

# **Teaching Department: Mathematics**

This course is prescribed to the lateral entry Diploma holders admitted to III semester of BE/B. Tech., programs, they shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student must fulfill the requirements during subsequent semester/s to appear for CIE.

MNC Courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree

# **Course Objectives:**

**1.** This course will enable the students to master the basic tools of differential calculus, partial differentiation, Laplace Transforms and Integration and become skilled for solving problems in science and engineering.

#### UNIT-I

# Differential Calculus 15 Hours

Limit, continuity, differentiation rules-product rule, quotient rule and chain rule. Taylor's series, Maclaurin's series of simple functions in single variable.

# **Partial Differentiation**

Definition, simple problems to find partial differentials, total differentiation, differentiation of composite functions, illustrative examples, and problems. Taylor's and Maclaurin's series for a function of 2 variables

# **UNIT-II**

# **Laplace Transforms**

15 Hours

Definitions, transforms of elementary functions, transforms of derivatives and integrals-properties.

# **Inverse Laplace Transform**

Inverse Laplace transforms and properties. Solutions of ordinary differential equations. Applications to engineering problems.

# **UNIT-III**

# **Integral Calculus**

10 Hours

Introduction, rules of integration, solution of integrals using the methods-substitution and partial fraction, integrals of standard functions, definite integral, simple problems.

Double integrals, change of order of integration, change in to polar coordinates. Triple integrals, simple Problems and applications.

Course Outcomes: At the end of the course student will be able to

1.	Learn the concept of limit, continuity, differentiability, and Taylor's theorem.
2.	Learn the concept of partial differentiation of a function with two or more
	independent variables.
3.	Apply the concept of Laplace transform in engineering applications.
4.	Find the inverse Laplace transform and hence to solve differential equations
5.	Apply the notion of multiple integrals to find areas and volumes.

In such a case, the student has to fulfill the requirements during subsequent semester/s to appear for CIE.

MNC Courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree

# **Course Objectives:**

1. This course will enable the students to master the basic tools of matrix theory, probability, differential equations, partial differential equations and become skilled for solving problems in science and engineering.

#### UNIT-I

Matrices 08 Hours

Elementary operations of a matrix, echelon form of a matrix, Rank of a matrix (both definitions). Consistency and solution of system of linear equations - Gauss elimination method. Eigen values and eigen vectors of matrices.

Probability 07 Hours

Finite sample space, event, mutually exclusive event, equally likely event, probability, addition theorem, conditional probability and independence conditions, multiplication theorem. Bayes' theorem.

#### **UNIT-II**

#### **Differential Equations**

08 Hours

Introduction, order and degree of differential equations, examples. Solution of first order and first-degree differential equations–variable separable method, Linear, Bernoulli's and exact differential equations (without I. F).

# **Second And Higher Order LDE**

07 Hours

Second order linear differential equation with constant coefficients, solution by inverse differential operator and method of variation of parameters.

### **UNIT-III**

# **First and Higher Order Partial Differential Equations**

10 Hours

First and higher order partial differential equations. Formation of partial differential equations by elimination of arbitrary constants/ arbitrary functions. Solution of PDE's by direct integration method.

#### Course Outcomes: At the end of the course student will be able to

- **1.** Reduce the matrix to echelon form and find its rank
- 2. Understand the concept of probability and apply Bayes theorem to real life problems
- **3.** Solve the differential equations
- **4.** Solve higher order linear differential equations
- **5.** Form partial differential equations by eliminating the arbitrary constants and functions

# INTEGRATED PROFESSIONAL CORE COURSES

# **BUILDING MATERIALS AND CONSTRUCTION**

Course Code:	CV2001-1	Course Type:	IPCC
Teaching Hours/Week (L:T:P: S):	3:0:2:0	Credits:	04
<b>Total Teaching Hours:</b>	40+0+26	CIE + SEE Marks:	50+50

# **Teaching Department: CIVIL ENGINEERING**

# **Course Objectives:**

- **1. Know** the types, uses, manufacturing process and properties of building materials like stone, brick and tiles.
- **2. Understand** the properties, types, uses of timber, cement and Other building material.
- **3. Discuss** the purpose of site investigation and types of foundation.
- **4. Identify** different types of masonry and building components.
- **5. Understand** the various materials used in different structural components.

#### **UNIT-I**

**BUILDING STONE**: Common building stones and their uses, quarrying, dressing of stones, deterioration and preservation.

**BRICKS**: Manufacture, properties, testing, classification, uses and qualities as per BIS. **TILES**: Types and uses of tiles, testing and classification of Mangalore Tiles.

07 Hours

**TIMBER**: Varieties and uses, defects, seasoning, preservation and test for good timber its uses.

**ENGINEERED TIMBER PRODUCTS**: Types, properties and uses.

**Cement:** Types, Properties and applications.

**MODERN BUILDING MATERIALS**: Properties and uses of Aluminum, Mild steel,

07 Hours

Brass and Cast iron.

#### **UNIT-II**

**SITE INVESTIGATION**: Necessity, Importance, Bearing Capacity-definition and determination (method of dropping weight and plate load test).

06 Hours

**FOUNDATIONS:** Introduction, classification, types- spread, combined, strap, raft and pile foundation (friction and load bearing piles).

**STONE MASONRY:** Classification – Rubble and Ashlar, masonry joints.

05 Hours

**BRICK MASONRY:** Terminologies, Bonds – Rules, Types-English and Flemish bond (1

LINTELS: Classification and method of construction. ARCHES: Technical Terms, stability

and 1.5 brick thick)

**COMPOSITE MASONRY**: Reinforced brick and Glass block.

05 Hours

and classification.

CHEJJA, CANOPY AND BALCONY: method of construction

#### **UNIT-III**

FLOORS: Requirements, Types and method of laying: mosaic, ceramic, marble, granite, vitrified tile and industrial flooring (granololitic) and floor coverings.

ROOFS AND ROOF COVERINGS: Roof-Requirements and types.

Roof Coverings-Mangalore tiles, Asbestos Cement Sheets and Galvanised Iron sheets, weather proofing for RCC roof slab.

STAIRS: Technical terms, requirements and classification.

**DOORS:** Technical terms, location and types- paneled, glazed, flush, collapsible and rolling shutters. **WINDOWS:** Types -paneled, glazed, bay, dormer and corner window. **PLASTERING:** Types - lime and cement mortar. Special type of plastering: asbestos marble, acoustic, granite silicon, gypsum, stucco and lath plastering. **PAINTING:** Purpose, types of paint- Varnishes, distemper, enamels and emulsion, application of paints on new and old surfaces.

05 Hours

# **Suggested List of Experiments**

# **MATERIAL TESTING LABORATORY**

1	Determination of Specific gravity of aggregates.
2.	Determination of grain size using sieve analysis of aggregates.
3.	Determination of Water absorption of aggregates.
4.	Determination of Bulk density of Aggregates.
5.	Determination of Bulking of Fine aggregate.
6.	Determination of compressive strength of Bricks and Tiles.
7.	Efflorescence and Hardness test on Brick.
8.	Determination of Normal Consistency of Cement.
9.	Determination of Setting time of cement.
10.	Determination of Specific gravity of cement.
11.	Determination of compressive strength of cement.

# Course Outcomes: At the end of the course student will be able to

1.	<b>Describe</b> the properties, types and applications of common building materials like stone,
	brick and tiles.
2.	<b>Explain</b> the properties, types and uses of Timber, cement and modern building materials.
3.	<b>Explain</b> the field tests to determine the bearing capacity of soil and discuss the types of
	foundation.
4.	<b>Explain</b> the types of masonry and summarize the importance of building components.
5.	Outline the importance of floors, roof and roof coverings, stairs, doors, windows, plastering
	and painting

# **FLUID MECHANICS AND HYDRAULICS**

Course Code:	CV2002-1	Course Type:	IPCC
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	03
Total Teaching Hours:	40+0+0	CIE + SEE Marks:	50+50

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	Explain the basic properties of fluids, types of fluids and measurement of pressure
2.	Classify the flows and Apply continuity equation and Bernoulli's energy equation for
	fluid flow problems
3.	Analyse flow through pipes and measuring devices
4.	Explain uniform flow, determine most economical channel sections applying Chezy's
	and Manning's formulae
5	Determine force of impact of jet on vanes

### **UNIT-I**

# INTRODUCTION, FLUID PROPERTIES AND CLASSIFICATION OF FLUIDS 07 Hours

Scope and Importance, Definition of fluid, Distinction between solids and fluids, liquid and gas, fluid continuum, Definitions: Mass density, Specific Volume, Specific Weight, Relative density, Viscosity, Newton's law of viscosity, Newtonian and Non-Newtonian Fluids, Ideal and Real fluids, Compressibility, Vapour pressure, Surface tension and Capillarity.

# FLUID PRESSURE, FLUID STATICS AND FLUID KINEMATICS

08 Hours

Definition of pressure, Pressure at a point, Pascal's law and Hydrostatic pressure law (no derivation), Absolute and Gauge pressure, Measurement of pressure - Simple and Differential manometers, Bourdon's pressure gauges. Introduction to total pressure and center of pressure on immersed plane surfaces (no derivations). Classification of flow, lines of flow, continuity equation (for one dimensional flow only) and its applications.

#### **UNIT-II**

FLUID DYNAMICS 04Hours

Euler's equation and Bernoulli's energy equation with assumptions and limitations ( No derivation), Applications of Bernoulli's energy equation - Pitot tube and Venturimeter.

# **FLOW THROUGH PIPES**

04 Hours

Major and minor losses in pipe flow, Equation for head loss due to friction (Darcy-Weisbach equation-no derivation), Minor losses (types), Pipes in series, Parallel and equivalent pipe. Water hammer in pipes -Definition, causes, effects and control, Surge tanks- Functions and types.

#### **FLOW MEASUREMENTS**

07 Hours

Flow through Orifices - Classification, Hydraulic co-efficients of an Orifice and relationship between them, Flow through mouth pieces- Classification.

Classification of notches and weirs, Equation for discharge over rectangular, trapezoidal, V-notch and Cippoletti notch.

# **UNIT-III**

#### **FLOW IN OPEN CHANNELS**

**05 Hours** 

Definition, classification, comparison between pipe flow and open channel flow, types of flow, Geometric properties, Uniform flow –Chezy's and Manning's formulae, most economical sections. Derivation of conditions for most economical rectangular and trapezoidal channel sections.

# **IMPACT OF JET ON VANES**

05 Hours

Introduction, Impulse–momentum equation and its applications, Force exerted by a jet on fixed and moving vanes, on a series of flat vanes and curved vanes (no derivations) work done and efficiency.

### Course Outcomes: At the end of the course student will be able to

1.	Illustrate properties of fluids.
2.	Explain measurement of pressure, classify the flows and apply continuity equation on
	fluid flow problems.
3.	Explain Bernoulli's energy equation for fluid flow and make use of this equation on
	venturimeter, Pitot tube, flow through pipes and analyse water hammer in pipes
4.	Determine flow through orifices, mouthpieces, notches and weirs
5.	Determine most economical channel sections applying Chezy's and Manning's
	formulae and analyse force exerted by a jet striking on vanes applying impulse-
	momentum principle

Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	04
Total Teaching Hours:	40+0+26	CIE + SEE Marks:	50+50
Prerequisite	CV1002-1		

# Course Objectives: This Course will enable students to

- Discuss various methods of population forecasting and explain the characteristics of water.
- **2.** Depict the information about water treatment units
- **3.** Determine the objectives of wastewater collection and analyzing the characteristics of wastewater
- **4.** Depict the information about wastewater treatment units.
- **5.** Discuss the various methods of the water distribution system and explain the laying, testing of sewers and sewer appurtenances.

# **UNIT-I**

# **QUANTITY and QUALITY OF WATER**

08 Hours

Human activities and environmental pollution, Types of water demands, Per capita consumption, Factors affecting per capita demand, Population forecasting methods, Fire demand, design periods & factors governing the design period. Physical, chemical and biological examinations using analytical and instrumental techniques.

#### TREATMENT OF WATER

08 Hours

Flow diagram of municipal water treatment plant. Preliminary treatment. Primary treatment: sedimentation tanks – theory and operation, types, Sedimentation aided with coagulants like copperas and alum. Filtration: Mechanism, theory of filtration, slow sand, rapid sand and pressure filters. Disinfection- methods of disinfection, Softening: lime soda process and zeolite process, fluoridation and de-fluoridation.

#### **UNIT-II**

#### **QUANTITY AND ANALYSIS OF SEWAGE**

08 Hours

Introduction: Necessity for sanitation, methods of domestic waste water disposal, types of sewerage systems and their suitability. Quantity of sewage: Dry weather flow, factors affecting dry weather flow, estimation of storm flow, rational method and empirical formulae for design of storm water drain, time of concentration. Self-cleansing and non-scouring velocities. Physical, chemical and biological characteristics, BOD and COD. Disposal of effluents – natural methods.

#### TREATMENT OF WASTEWATER

08 Hours

Flow diagram of municipal water and wastewater treatment plant, Preliminary treatment-Screening, grit chambers, skimming tanks, Primary treatment, Secondary treatment: Attached growth process-trickling filter, suspended growth process – Activated sludge process.

#### **UNIT-III**

#### **CONVEYANCE AND DISTRIBUTION OF WATER**

04 Hours

Collection and conveyance of water from surface and subsurface sources, intake structures. Methods of distribution systems- System of supply and Methods of layout distribution.

# LAYING, TESTING OF SEWERS AND SEWER APPERTENUNCES

04 Hours

Laying, testing, ventilation of sewers. Sewer appurtenances: manholes, oil and grease traps, drainage traps.

dramaç	dramage traps.										
	Suggested List of Experiments										
	Determination of solids in sewage: Total solids, suspended solids, dissolved solids,										
	volatile Solids, fixed Solids and settable solids.										
2.	Determination of Electrical conductivity.										
3.	Determination of Turbidity										
4.	Determination of Chlorides.										
5.	Determination of Alkalinity, Acidity and pH.										
6.	Determination of Calcium, Magnesium and Total Hardness										
7.	Determination of Dissolved Oxygen.										
8.	Determination of BOD										
9.	Determination of COD.										
10.	Determination of Available Chlorine in bleaching powder										
11.	Determination of Chlorine Demand and Residual Chlorine										
12.	Determination of Optimum dosage of Alum by Jar test.										
13.	Determination of Iron.										
14.	Determination of Sulphate.										
15.	Determination of Nitrates.										

# Course Outcomes: At the end of the course student will be able to

1	<u>.                                    </u>	Identify the sources and characteristics of water.										
2		Estimate the quantity of drinking water and design the various treatment units.										
3	3.	Identify the source and estimate quantity of wastewater generated.										
4	·	Analyze characteristics of wastewater, explain the importance of disposal of sewage										
		and design the various treatment units.										
5	5.	Understand the process of conveyance and distribution of water and laying and										
		testing of sewers.

Course Code:	CV2004-1	Course Type:	IPCC
Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	04
Total Teaching Hours:	40+0+26	CIE + SEE Marks:	50+50

# Course Objectives: This Course will enable students to

- **1. Summarize** the surveying; **explain** the basic principles, **measure** distances and angles.
- **2. Summarize** the methods of leveling, traversing and **compute** the levels and closing error.
- **3. Summarize** the use of contours and **compute** the area and volume measurements.
- **4. Study the** digital surveying instruments, such as Total station, GNSS and Global Positioning Systems
- **5. Study** the basics of photogrammetry, Remote sensing, GIS and its Applications.

#### **UNIT-I**

# Introduction; Measurement of Horizontal Distances, Angles and Directions 07 Hours

Definition, objectives and importance, primary divisions, classification, instruments for setting out right angles. Surveying measurements and errors, types of errors, precision and accuracy.

Horizontal distances - using tapes, taping on level ground and sloping ground, systematic errors in linear measurement by tape, ranging of lines – types. Direction of a line, types of bearings, azimuth, conversion of bearing and azimuth.

# **Computation of levels; Traversing**

08 Hours

Computation of levels - Basic terms and definitions, curvature and refraction, Principle of leveling, Types - Differential, Profile, Reciprocal leveling. Level Computation - Height of Instrument Method, Rise and Fall Method.

Traversing - Types, Latitudes and departures, Closed traverse computations and adjustments - Transit rule, Bowditch (compass) rule, omitted measurements.

#### **UNIT-II**

# **Contours; Measurement of area and volumes**

07 Hours

Contours - Basic definitions, Characteristics of contours, uses of contours, Interpolation of contours.

Measurement of area – by dividing into geometrical figures, area from offsets, mid ordinate rule, trapezoidal and Simpson's one third rule, area from co-ordinates, planimeter – principle and measurement.

Measurement of Volumes - Trapezoidal and prismoidal formula, reservoir capacity.

Digital land surveying instruments: Total Station, Global Positioning Systems & GNSS

08 Hours

Electronic Distance Measurement (Total Station) - Basic Concept, Classification of Electromagnetic Radiation, Principle of EDM, Errors, Accuracy, Effect of Atmospheric conditions on wave velocity, computing distance from the phase differences, Instrumental errors, Triangulation and Trilateration, Working principle of Global Positioning Systems & amp; GNSS and its applications.

#### **UNIT-III**

# **Maps**; Photogrammetry

05 Hours

Photogrammetry: Stereo images, Scale in Aerial photographs, Parallax, Advantages, Geometry of Aerial Photographs - Scale of Vertical Photographs, Relief Displacement, Flight planning, Applications.

# **Geospatial Techniques**

05 Hours

Introduction to remote sensing and Geographical Information System: Applications in Civil Engineering (transportation, town planning).

	Suggested List of Experiments								
	Minor Exercise								
1.	Determination of Reduced levels of given points.								
2.	Introduction to Total Station, Components, Temporary Adjustments								
3.	Measurement of Horizontal and Sloping Distance / Horizontal and Vertical angle measurement using Total Station								
4.	Orientation of Total Station using compass and Measurement of Magnetic Bearings and co-ordinates (N, E, Z) of various points from one instrument position.								
5.									
6.	Detailed survey of an area including creation of job file, selecting appropriate point								
	codes, measurement of coordinates, downloading of data and preparation of								
	contour map.								
_	Major Exercise								
7.	Traversing using Total Station (Orientation at the first station by compass and at								
	subsequent stations by back sighting) and Area measurement.								
8.	Setting out positions of column centres of a Multi-storey Building								
	Demonstration Experiments								
1.	Demonstration of L/S, C/S using SW_DTM and Auto CAD								
2.	· · · · · <b>J</b> =								
Course	• Outcomes: At the end of the course student will be able to								

- Classify the surveying, explain the principles, measure distances and angles 1.
- 2. **Explain** the methods of leveling, traversing and **compute** the levels and closing error.

Explain the use of contours and compute the area and volume measurements.
 Summarize the principles and applications of Total Station GPS, GNSS, and Global Positioning systems.
 Explain the concepts and applications of Photogrammetry, Remote Sensing, GIS and its applications.

DESIGN OF R.C.C. STRUCTURAL ELEMENTS												
Course Code: CV2005-1 Course Type: IPCC												
Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	04									
Total Teaching Hours:	40+0+26	CIE + SEE Marks:	50+50									
Prerequisite	CV2107-1											

# **Course Objectives:**

	<b>J</b>
1.	To summarize the basic knowledge of construction materials, codal requirements,
	limit state method and working stress method.
2.	To analyze the singly reinforced section and doubly reinforced section subjected to
	flexure and shear.
3.	To know the design and detailing concepts of RC beams by limit state method as per
	IS 456: 2000.
4.	To know the design and detailing concepts of RC columns by limit state method as
	per IS 456: 2000.
5.	To know the design and detailing of RC one way slabs and two way slabs for different

#### **UNIT-I**

16 Hours

#### **Introduction to RCC**

boundary conditions as per IS 456: 2000.

Materials, advantage and general features of Reinforced Concrete (RC), design requirements of IS 456:2000, design philosophy – Working stress and Limit State Methods.

# Principles of Limit State Method of design and Ultimate Strength of RC sections

Introduction, characteristic and design loads, principles of LSM of design, characteristic and design strength, general aspects of ultimate strength, stress block parameters for limit state of collapse, analysis of RC sections - ultimate flexural strength of singly reinforced and doubly reinforced sections, ultimate shear strength of RC sections, Concepts of development length and anchorage

#### **UNIT-II**

14 Hours

# **Serviceability Limit States**

General aspects, deflection limits as per IS 456:2000, calculation of deflection (theoretical method), cracking in structural concrete members, crack width computation.

# **Design of Beams**

Practical requirements, critical section design procedures for moments and shears, check for anchorages and development length, design of rectangular sections (simply supported and cantilever beams).

**Design of Columns -** General aspects, effective length, loads, slenderness ratio, minimum eccentricity, design of short axially loaded columns, design of columns subjected to combined axial load, uniaxial and biaxial bending using IS 456:2000 and SP 16.

#### **UNIT-III**

10 Hours

# **Design of Slabs**

Practical requirements, design of simply supported one way and two way slabs for selected boundary conditions and design of cantilever slabs as per IS456:2000.

# **Suggested List of Experiments (Detailing)**

Detailing of RC structures using Auto Cad – Beams (Singly reinforced and doubly
reinforced beam).

- **2.** Detailing of RC structures using Auto Cad Cantilever beam.
- **3.** Detailing of RC structures using Auto Cad Slabs (One way slab and two way slab).
- **4.** Detailing of RC structures using Auto Cad Continuous slabs.
- **5.** Detailing of RC structures using Auto Cad Cantilever slab.
- **6.** Detailing of RC structures using Auto Cad Continuous Beams.
- **7.** Detailing of RC structures using Auto Cad Columns.
- **8.** Detailing of RC structures using Auto Cad footings (Isolated square and rectangular footing).
- **9.** Detailing of RC structures using Auto Cad Combined footing.
- **10.** Detailing of RC structures using Auto Cad Mat foundation
- **11.** Detailing of RC structures using Auto Cad Dog-legged stair case.
- **12.** Detailing of RC structures using Auto Cad Spiral stair case.

# Course Outcomes: At the end of the course student will be able to

- **1.** Explain the working stress and limit state methods as per IS 456:2000.
- **2.** Estimate the moment carrying capacity and shear resistance of singly reinforced section and doubly reinforced section using limit state method.
- **3.** Analyze, design and sketch the structural detailing of rectangular RC beams.
- **4.** Analyze, design and sketch the structural detailing of RC columns.
- **5.** Analyze, design and sketch the structural detailing of one way, two way and cantilever RC slabs.

Course Code:	CV2006-1	Course Type:	IPCC
Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	04
Total Teaching Hours:	40+0+26	CIE + SEE Marks:	50+50
Prerequisite	CV1001-1		

**Teaching Department: Civil Engineering** 

# **Course Objectives:**

- To acquire knowledge of Soil as a three-phase system and explain index properties.
   To understand the need for soil classification based on IS classification systems and to know the concept of Soil Structure also to Describe the various types and methods
- involved in the study of stresses under various types of loadings.
- **3.** To understand the concept of Permeability and Capillarity on soils and study the effect of Compaction Characteristics on soil.
- **4.** To understand the Consolidation characteristic of soil and its use in the field of foundation engineering.
- **5.** To understand the Shear Strength of soil and its determination-using laboratory experiments, and Assess the bearing capacity of various types of shallow foundations and estimate the probable settlements.

#### UNIT-I

# INDEX PROPERTIES OF SOILS AND THEIR DETERMINATION:

07 Hours

Phase Diagram, Definitions- void ratio, porosity, degree of saturation, percentage air voids, air content, specific gravity, water content, soil densities, functional relationships, field identification of soils.

Index Properties: Grain size distribution, Atterberg's Limits and Indices, Insitu density, density index Laboratory determination: specific gravity, grain size distribution-sieve analysis and sedimentation analysis (Hydrometer Method), Liquid Limit (Casagrande Method), plastic limit and shrinkage limit.

#### **SOIL CLASSIFICATION and STRUCTURE**

04 Hours

Classification of soils: Need for classification, Plasticity Chart and its importance, IS Soil Classification System.

Soil structure Soil structure –Single grained, honey combed, flocculent and dispersed structures.

#### **STRESS DISTRIBUTION IN SOILS:**

05 Hours

Boussinesq's theory – point load, line load, strip load, uniformly loaded circular area, Vertical stress distribution diagrams, Newmark's influence chart, Westergard's equation, Comparison.

#### **UNIT-II**

#### **SOIL HYDRAULICS:**

05Hours

Darcy's law - assumptions and validity; coefficient of permeability, Seepage velocity, superficial velocity and coefficient of percolation. Laboratory determination (constant head and variable head tests), field determination (pumping out test). Factors affecting permeability.

# SOIL COMPACTION: 04 Hours

SOIL COMPACTION: Moisture—density relationship, Zero-air voids line, laboratory tests (light and heavy compaction), factors affecting compaction. Field compaction methods, compaction specifications and field control.

#### COMPRESSIBILITY OF SOIL AND CONSOLIDATION:

05Hours

Compressibility of soil and consolidation: Compressibility of soil and volume change-compression index, coefficient of compressibility, coefficient of volume change. The consolidation process- spring analogy, normally consolidated and over consolidated soils, pre-consolidation pressure and its determination (Casagrande method). Terzaghi's theory of one-dimensional consolidation — assumptions, coefficient of consolidation and its determination by square root of time and logarithm of time fitting methods, computation of consolidation settlement.

#### **UNIT-III**

#### SHEAR STRENGTH OF SOILS:

05 Hours

**S**hear strength of soils: Stress – strain curve, Mohr - Coulomb failure criterion, peak and residual strength theory. Total and effective shear strength parameters, laboratory measurement of shear strength parameters by direct shear test, tri-axial compression test (different drainage condition), unconfined compression test and vane shear test. Factors affecting shear strength of soils, sensitivity and thixotropy.

# BEARING CAPACITY AND SETTLEMENT OF SHALLOW FOUNDATIONS

05 Hours

bearing capacity of shallow foundations: Basic definitions, types of shear failure in foundation soil, Terzaghi's and IS code methods, effect of ground water table and eccentricity.

SETTLEMENT: Types and modes of settlement -Allowable limits of settlement (IS 1904- 1986) allowable bearing pressure.

# **Suggested List of Experiments**

- 1. Specific gravity of coarse and fine grained soils, moisture content (oven drying and pycnometer).
  - 2. Grain size analysis (sieve analysis) and classification.
- 3. In situ density by core cutter and sand replacement methods
- 4. Atterberg's limits and indices.
- 5. Standard Compaction Test (IS light compaction test).
- 6. Coefficient of permeability (constant head and variable head methods).
- 7. Consolidation Test.
- 8. Direct shear test
- 9. Tri-axial Compression Test (undrained)
- 10. Unconfined compression strength test
- 11. Laboratory Vane shear test
- 12. California Bearing Ratio test.

# Course Outcomes: At the end of the course student will be able to

**1.** Assess the index properties of soil and to analyze the index properties of soil using laboratory tests .

2.	Explain the need for classification, classify the soil based on ISSCS, illustrate thesoil
	structure, and Describe the various types and methods involved in the study of
	stresses under various types of loadings.

- **3.** Assess the permeability and compaction characteristics of soils.
- **4.** Make use of principle of consolidation and to estimate the coefficient of consolidation using odometer test.
- **5.** Evaluate the shear strength parameters of soil and measure its shear strength, Determine the bearing capacity of shallow foundations applying Terzaghi's, IS code methods and estimate the settlement of foundation.

DESIGN OF ST	TEEL STRUCTURA	AL ELEMENTS	
Course Code:	CV2007-1	Course Type:	IPCC
Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	04
Total Teaching Hours:	40+0+26	CIE + SEE Marks:	50+50
Prerequisite	CV2107-1		

# **Course Objectives:**

1.	Understand the behavior of different types of steel structures
2.	Identify different types of sections used in steel construction
3.	Assess the strength and stability of components of steel structures
4.	Analyse the strength of various types of members as per the codal provisions
5.	Study the concepts of Design the structural components, viz., tension members,
	compression members, flexural members, column bases, bolted and welded connections
	using IS800:2007, steel tables and they are to Understand the importance of steel structures
	and their connections.

#### **UNIT-I**

16 Hours

**INTRODUCTION**: Advantages and disadvantages of steel structures, failure criteria for steel, IS codal provisions, section classification.

**BOLTED CONNECTIONS**: Advantages and disadvantages, Design strength of HSFG bolts, design of simple bolted connections (lap and butt), bracket connections.

**WELDED CONNECTIONS**: Advantages and disadvantages, strength of welds, design of simple welded connections.

Limit State Method of design, Types of welds, defects in welds

#### **UNIT-II**

14 Hours

**DESIGN OF TENSION MEMBERS:** Modes of failure, design of axially loaded tension members and their connections.

**DESIGN OF COMPRESSION MEMBERS:** Modes of failure, Design of single angle struts, compression members, Design of built up compression members.

**COLUMN BASES:** Design of simple slab base, gusseted base.

#### **UNIT-III**

10 Hours

**DESIGN OF FLEXURAL MEMBERS:** Types of beams, Modes of failure, Design strength of laterally supported and unsupported beams in bending and shear, Maximum deflection, Design of laterally supported and unsupported beams.

**TYPES OF CONNECTIONS:** Bracket connections - bolted and welded.

# Suggested List of Experiments 1. Detailing of Steel Structure using Auto Cad – Simple Seated Connection and Cleated

- Connection

  2 Detailing of Steel Structure using Auto Cod Peam to Peam connection
- 2. Detailing of Steel Structure using Auto Cad Beam to Beam connection
- 3. Detailing of Steel Structure using Auto Cad Beam to Column Connection
- 4. Detailing of Steel Structure using Auto Cad Slab Base
- 5. Detailing of Steel Structure using Auto Cad Gusseted Base
- 6. Detailing of Steel Structure using Auto Cad Simple Truss end connection

# Course Outcomes: At the end of the course student will be able to

- **1.** Explain the basic design philosophy to analyze and design the bolted and welded connections, as per IS 800:2007 guidelines.
- **2.** Analyze and design the tension and compression members with connections for the failure mechanisms.
- **3.** Analyze and design the compression, built-up compression members with slab base and gusseted base connection.
- **4.** Design laterally restrained and unrestrained beams and check the adequacy.
- **5.** Analyze and design bolted and welded bracket connections,

QUANTITY SURVEYING	QUANTITY SURVEYING AND CONTRACT MANAGEMENT											
Course Code:	CV2008-1	Course Type:	IPCC									
Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	04									
Total Teaching Hours:	40+0+26	CIE + SEE Marks:	50+50									
Prerequisite	CV2001-1, C	V2002-1, CV2003-1	•									

# **Course Objectives:**

- Estimate the quantities of different items of work by using Centre line method to know the approximate construction cost of buildings.
   Estimate the quantities of various items of work using the long wall-short wall method to determine the approximate cost of building construction.
   Explain the specifications of Civil construction works.
- **4.** Find the quantities and able to calculate the rates of items.
- **5.** Outline the contract systems from the point of contractor's interest to avoid conflictsbetween client and contractors.

#### UNIT-I

ESTIMATES: 08 Hours

Types, units of measurements, abstract, cost of materials and labour.

#### **BUILDING ESTIMATE:**

08 Hours

Methods of quantity extraction, cost of materials from Schedule of Rate (SR), preparation of detailedestimate for the load bearing structures using center line method and long wall-short wall method,

preparation of detailed estimate of R.C.C structures.

#### **UNIT-II**

#### SPECIFICATION:

08 Hours

Objectives, essentials, general and detailed specification of common building items.

#### **RATE ANALYSIS:**

08 Hours

Working out quantities and rates for earth work in different types of soils, P.C.C and R.C.C for differentmixes, bricks and stone masonry, centering and form work for different RCC structural components

flooring, plastering and painting.

#### **UNIT-III**

# **CONTRACT MANAGEMENT (Pre award):**

04 Hours

Tendering Process: Invitation to tender, Prequalification, administrative approval & Technicalsanction.

Bid submission and Evaluation process.

Letter of intent, Award of contract, letter of acceptance and notice to proceed.

#### **CONTRACT MANAGEMENT (Post award):**

04 Hours

Basic understanding on definitions, Performance security, Mobilization and equipment advances, Secured Advance, Suspension of work, breach of contract, Liquidated damages and bonus,

measurement and payment.

	measurement and payment.								
	Suggested List of Experiments								
1	Preparation of detailed estimate for the load bearing structures by center line method using AutoCAD and MS Excel								
2	Preparation of detailed estimate for the load bearing structures by long wall short wall method using AutoCAD and MS Excel								
3	Preparation of detailed estimate of the R.C.C structures using AutoCAD and MS Excel								
4	Rate analysis and preparation of Bill of Quantities (BOQ) by using MS Excel for different Civil Engineering items.								

# Course Outcomes: At the end of the course student will be able to

1	•	Prepare a detailed estimate for load bearing and RCC structures by center line method.
2	•	Prepare a detailed estimate for load bearing and RCC structures by long wall-short wall method.
3	•	Write the general and detailed specification of common building items to the clients.
4		Calculate the quantities and determine the rate of items.

**5.** Explain the tender and contract terminologies as applied to civil works.

# PROFESSIONAL CORE COURSES (THEORY)

Problem Solving Using Python									
Course Code:	CV2101-1	Course Type	PCC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
Total Teaching Hours	40	CIE + SEE Marks	50+50						
Prerequisite	CS1001-1	·							

# **Course Objectives:**

1.	Understand fundamental programming concepts using functions.
2.	Write and execute basic python programs using functions.
3.	Work on visualization using the built-in matplotlib functions.
4.	Create graphs using built-in matplotlib functions.
5.	Construct simple Graphical User Interface (GUI)

#### **UNIT-I**

15 Hours

**Functions:** Scope, parameter passing, mutable/immutable properties of data objects, passing strings, lists, tuples, dictionaries to functions, default parameters, positional parameters, return values, functions using libraries, mathematical and string functions.

#### **UNIT-II**

15 Hours

**Visualization with Matplotlib** - General Matplotlib Tips, Simple Line Plots, Simple Scatter Plots, Visualizing Errors, Density and Contour Plots, Histograms.

#### **UNIT-III**

10 Hours

**Graphical user interfaces;** event-driven programming paradigm; creating simple GUI; buttons, labels, entry fields, dialogs; widget attributes - sizes, fonts, colors layouts, nested frames.

# **Course Outcomes:** At the end of the course student will be able to

1.	Explain the basic program constructs and file operations in Python and express it.
2.	Design the Python programs using the concepts like strings, conversion of strings to
	numbers, lists, tuples and dictionaries.
3.	Implement the functions and object-oriented programming concepts in python.
4.	Create a Graphical User Interface, multiple threads and Client/Server programs in python.
5.	Implement a database connection and CGI programs in python.

Strength of Materials										
Course Code:	CV2102-1	Course Type	PCC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50							

<b>Course Obj</b>	ectives:
-------------------	----------

1	•	Understand and determine the stresses,	strains	in bars,	volumetric	strain,	elastic
		constants and thermal stresses					

- 2. Understand and determine normal and shear stresses on a given plane, principal stresses and their planes for a general 2-D stress system
- **3.** Understand the variation of bending and shear stress across various beam sections and find slope and deflection in determinate beams applying Mecaulay's method
- 4 Analyze thin and thick cylinders subjected fluid pressure
- **5.** Understand the behavior of different types of columns subjected to axial load and compute buckling load of long columns and to design a shaft subjected to torque

#### **UNIT-I**

**Simple Stresses and Strain:** Introduction, Total Elongation of bars of constant and varying sections. Elongation due to self-weight, statically indeterminate members. volumetric strain, elastic constants, and their relationship. Thermal stresses (excluding thermal stresses in compound bars).

8 Hours

**Compound stresses:** Introduction, stress components on inclined planes, general two-dimensional stress system, principal planes and principal stresses, Mohr's circle of stresses.

7 Hours

# **UNIT-II**

**Bending stresses and shear stresses in beams:** Introduction, simple bending theory, bending equations (no derivation), modulus of rupture, section modulus, flexural rigidity, expression for horizontal shear stress in beam, shear stress diagram for rectangular, I and T section (fletched beams not included).

07 Hours

**Deflection of beams:** Introduction, slope and deflection, differential equation of elastic curve, slope and deflection for statistically determinate beams using first principles and Macaulay's method subjected to point loads, UDL and couple.

06 Hours

#### **UNIT-III**

**Thin and Thick Cylinders:** Thin cylinders subjected to internal pressure, change in length, diameter and volume, thick cylinders - Lame's equations (excluding compound cylinders).

06 Hours

**Columns and Struts:** Introduction, short and long columns, Euler's theory for columns with both ends hinged, effective length, slenderness ratio, radius of gyration, Euler's buckling load and Rankine's load for different end conditions and limitations of Euler's theory.

06 Hours

# Course Outcomes: At the end of the course student will be able to

- **1. Determine** the stresses, strains in bars, volumetric strain, elastic constants, and thermal stresses.
- **2. Determine** normal and shear stresses on a given plane, principal stresses and their planes for a general 2-D stress system.
- **4. Determine** bending stresses, shear stresses for statically determinate beams and **compute** slope and deflection applying Mecaulay's method.
  - **Determine** stresses developed in thin and thick cylinders subjected fluid pressure
- **5. Determine** buckling load for axially loaded columns using Euler's and Rankine's theory

Structural Analysis-I												
Course Code:	CV2103-1	Course Type	PCC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50									
Prerequisite	CV2106-1											

# **Course Objectives:**

- **1.** Determine member forces of the truss by method of joints.
- **2.** Determine slope and deflection of determinate beams by conjugate beam method.
- **3.** Develop strain energy expression and calculate the displacement of beams and cantilever frames by strain energy method and unit load method.
- **4.** Analyze indeterminate beams using Clapeyron's theorem of three moments.
- **5.** Analyze three hinged parabolic arches, circular arches and cables under loading cases.

## **UNIT-I**

## **Structural Systems**

08 Hours

Forms of structures, conditions of equilibrium, degree of freedom, linear and nonlinear structures; one, two- and three-dimensional structural systems, determinate and indeterminate structures, degree of static indeterminacy and kinematic indeterminacy.

## **Plane Truss**

Types, Assumptions, Analysis by method of joints.

# **Displacement of Beams**

08 Hours

Slope and deflection: definition, sign conventions.

Conjugate beam method: Concept and application to find slope and deflection of determinate beams (uniform and varying cross section).

## UNIT-II

## Strain Energy

08 Hours

Concept, Strain energy due to axial load, bending and shear, Castigliano's theorems, Displacement of beams and cantilever frames by strain energy method and unit load method.

# **Analysis of Beams**

08 Hours

Clapeyron's theorem of three moments for continuous and fixed beams.

#### **UNIT-III**

# **Analysis of Arches and Cables**

08 Hours

Three hinged parabolic and circular arches with supports at same level. Determination of normal thrust, radial shear and bending moment.

Analysis of cables under point loads, UDL and determination of cable length with supports at same level.

5.

1.	Explain the concept of determinacy of the structure and find the forces in the
	members of the truss using method of joints.
2.	Determine the slope and deflection at given points on a determinate beam using
	conjugate beam method.
3.	Develop strain energy expression and determine displacement of determinate
	beams, cantilever frames using strain energy method and unit load method.
4.	Analyze indeterminate beams applying Clapeyron's theorem of three moments.

**Course Outcomes Mapping with Program Outcomes & PSO** 

Analyze arches and cables with supports at same level.

# **CONCRETE TECHNOLOGY**

Course Code:	CV 2105-1	Course Type:	PCC
Teaching Hours/Week (L:T:P: S):	3:0:0:0	Credits:	03
Total Teaching Hours:	40	CIE + SEE Marks:	50+50

# **Teaching Department: Civil Engineering**

## **Course Objectives: This Course will enable students to:**

1.	Study the chemical composition, types and tests on cement.
2.	Learn different types of aggregates and admixtures.
3.	Comprehend the properties of fresh concrete, & manufacturing process of concrete
4.	Understand the properties, testing and study the durability of hardened concrete
5.	Understand the concept of mix design of concrete and know various types of special
	concretes & their applications.

## **UNIT-I**

#### **INGREDIENTS:**

**CEMENT:** Portland cement-chemical composition, properties, hydration and manufacture process. Fineness, compressive strength, setting time and soundness tests as per BIS.

**AGGREGATES:** Properties of coarse and fine aggregates and their influence on concrete.

**WATER:** quality and permissible impurity limits as per BIS

**ADMIXTURES:** Chemical: accelerators, retarders, air entraining agents, plasticizer and superplasticizer, tests on admixture, chemistry and compatibility with concrete.

Mineral: fly ash, silica fumes, rice husk ash and blast furnace slag.

15 Hours

## **UNIT-II**

**FRESH CONCRETE:** Introduction to workability-factors affecting, measurement (slump, compaction factor, flow and Vee Bee consistometer), segregation and bleeding, process of manufacture-batching, mixing, transporting, placing, compaction, finishing and curing.

**HARDENED CONCRETE:** Factors affecting strength: w/c ratio, gel/space ratio and maturity concept, testing of hardened concrete: destructive methods-compressive strength, split tensile strength and flexural strength, non-destructive methods-rebound hammer and pulse velocity.

**DURABILITY:** Definition and significance, Shrinkage, chemical attack-sulphate attack, chloride attack, carbonation, freezing and thawing.

15 Hours

#### **UNIT-III**

**CONCRETE MIX DESIGN:** Objectives, factors affecting and BIS method.

**INTRODUCTION TO SPECIAL CONCRETES:** High volume fly ash concrete, light weight concrete, high density concrete and self-compacting concrete: materials, properties and applications

10 Hours

1.	Explain the types, hydration mechanism and tests on cement as per BIS.									
2.	Describe the properties, their influence on concrete as per BIS and analyze the effect									
	of chemical and mineral admixtures.									
3.	Explain the manufacturing process and determine the fresh concrete behavior.									
4.	Explain the properties, testing procedure and assess the durability of hardened									
	concrete.									
5.	Design standard grade conventional concrete mix proportions as per BIS and identify									
	the suitability of special concretes based on their application.

Structural Analysis-II												
Course Code:	CV2104-1	Course Type	PCC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
<b>Total Teaching Hours</b>	40	50+50										
Prerequisite CV2106-1, CV2107-1												

# **Course Objectives:**

- **1.** Explain strain energy concept and analyze statically indeterminate trusses using minimum strain energy method.
- 2. Develop slope deflection equations and analyze indeterminate beams and frames.
- **3.** Analyze indeterminate beams and frames using moment distribution method.
- **4.** Demonstrate Kani's Rotation Contribution method to analyze indeterminate beams and frames.
- **5.** Analyze indeterminate beams using matrix method.

## UNIT-I

## **Indeterminate (Redundant) Trusses**

08 Hours

Introduction, analysis of statically indeterminate trusses using minimum strain energy method (redundant up to second degree).

# **Slope Deflection Method**

08 Hours

Introduction, sign convention, development of slope-deflection equations, analysis of continuous beams and symmetrical frames (indeterminacy up to two)

## **UNIT-II**

## **Moment Distribution Method**

08 Hours

Introduction, distribution factor, development of distribution table in analysis of continuous beams and symmetrical frames (indeterminacy up to two)

# **Kani's Rotation Contribution Method**

08 Hours

Introduction, rotation factor, analysis of continuous beams and symmetrical frames.

## **UNIT-III**

# **Fundamentals of Matrix Method**

08 Hours

Introduction, axes and coordinates, flexibility and stiffness matrix method, relationship between flexibility and stiffness matrices, system approach of flexibility and stiffness matrix method for analysis of propped cantilever and continuous beams (up to two span).

- **1.** Analyze the indeterminate trusses using minimum strain energy method.
- **2.** Develop slope deflection equations and analyze continuous beams and symmetrical frames.
- **3.** Analyze the indeterminate beams and symmetrical frames using moment distribution method.
- **4.** Carryout analysis of continuous beams and symmetrical frames by Kani's rotation contribution method.

**5.** Explain the concept of flexibility and stiffness, develop relationship between flexibility and stiffness matrices and analyze the indeterminate beams by matrix method.

BUILDING INFORMATION MODELING												
Course Code:	CV 2108-1	Course Type	PCC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
<b>Total Teaching Hours</b>	45	CIE + SEE Marks	50+50									

# **Course Objectives:**

1.	Understand the concept of Building Information Modeling using <b>REVIT</b>
2.	Create the workflow followed in industry during creation of BIM 3D model which
	includes
3.	Build the discipline-based model and create the federated models using
	NAVISWORKS
4.	Design the process of creating the 4D & 5D BIM model

## **UNIT-I**

06 Hours

**Evolution of Engineering, Introduction to BIM Concepts and Design Authoring:** Evolution of Engineering from 2D drawings to BIM Model, Isometric View, Limitation of Isometric views and concept of 3D-Modeling, Building Information Modeling – Introduction & Process, Design Authoring – Concepts and workflow, Fundamentals of Discipline Based Modeling, Introduction to stages of BIM Modeling process as per ISO 19650, Federated model- concepts and demonstrations, workflow of design coordination, Engineering Analysis – Concept and types of analysis, Process and workflow of Design Review in BIM.

06 Hours

**Planning of Landside works and Airside works:** Views in BIM Model, Visualization Modes, Walkthrough of the Model, Fly through the model, Layers & Properties, Concept of viewpoints, Sectioning and Visualization through Tablet and Mobile, Concept of BIM Kiosk & BIM Rooms, Visualization through Augment Reality (AR), Virtual Reality (VR) & Mixed Reality (MR)

Clash Check – Types, Clash avoidance process, Clash Detection Process, Clash Detection Priority Matrix and Report generation, Clash Detection Rules, Report, Grouping, Clash Detection Process – Demo

## **UNIT-II**

**06 Hours** 

**Documentation & CDE & Level of Development:** Documentation and CDE (Common Data Environment) -2D drawings generation from BIM Model, Computer Network types, Concept of Cloud Computing, Concept and Application of CDE: Traditional Information Sharing, Definition, Reference, and Concept, Setting up the workflow and process for CDE-File naming convention, Roles and Responsibilities, Request for Information and Review Process

Concept of LOD (Level of Development), preparation of LOD matrix and Progression matrix-Definition of LOD, Level of Detail and Information, LOD- Wall foundation, Precast Structural Inverted T-Beam, Domestic Water Piping, Plumbing Fixture, Packaged Generator Assembly, LOD- Chart, Matrix and Model Progression Matrix

06 Hours

**4D / Field BIM & Its Applications:** Introduction to 4D / Field BIM: Concept of 4D, Introduction to construction sequence and project schedule, Project scheduling using Gantt Chart and its limitation, 4D BIM Modeling-Project demo and workflow, Synchronization of 4D BIM Model with project schedule, Reviewing project progress w.r.t planned dates and actual dates, Generation of Reports

Application of Field BIM/ 4D BIM: Understanding concept and usage of BIM in field for coordination- 3D Coordination and Visual Communication, Site utilization planning and Construction analysis, Application of wearables in coordination. 3D Control and planning Other Applications of Field BIM/ 4D BIM: Concept and usages of BIM in field for safety, disaster and risk analysis, digital fabrication and scan to BIM, Existing Condition Modeling, Phase Planning, As-built/ Record Models

## **UNIT-III**

**06 Hours** 

**5D BIM, AIM & Beyond BIM - Emerging Trends:** 5D BIM: Introduction concepts of 5D BIM, Quantity take off with UoM, Concept of QTO with UoM, 5D BIM with UoM with cost, Quantity take off exercise, Demo of Quantity take off: Understanding QTO for Wall, Plaster & Tile, BIM Maturity LOD and General Practice of QTO, Cost Breakup structures, 5D BIM and cost control

AIM: Introduction to Asset Information Model (AIM), COBie structures and Asset Information Deliverables, Space Attributes and Asset Attributes - Examples with data, Asset requirement-Discipline wise Infrastructure System, Classification code and Information Exchange, Information Exchange with Facility Management

Beyond BIM: Emerging Trends- Concepts of Industrialisation, IoT, Big Data, Data Analytics and their applications in BIM: Industrialisation of Construction through BIM- DfMA, IoT in BIM, BIM and Big data, Data Analytics using AI & ML

Future scope of BIM Applications: Smart Infrastructure and the need for connected infrastructure, Digital twins- Concepts and benefits, National Digital Twin or a City level Digital Twin in a Smart City, Fundamental requirements for the success of a Digital Twin and its uses, Digital Twin applications in diverse industries.

- 1. Interpret the basic principles of BIM evolution and concept of BIM in lifecycle of project
- **2. Understand** the workflows of Design authoring followed in industry during creation of 3D model
- **3. Analyse** the various engineering analysis and the process followed in industry to check and resolve clashes

- **4. Evaluate** the integration of schedule and cost in 3D model using 4D and 5D BIM
- 5. Illustrate the various emerging trends of BIM & concept of digital twin

## **E Books / MOOCs/ NPTEL**

1. L&T EduTech LMS Content

# **DESIGN AND CONSTRUCTION OF HIGHWAYS AND PAVEMENTS**

Course Code:	CV2109-1	Course Type	PCC
Teaching Hours/Week (L: T: P: S)	2:0:0:2	Credits	03
Total Teaching Hours	45	CIE + SEE Marks	50+50

## **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	Describe the highway geometry, cross section elements and pavement layer
	behaviour
2.	Impart knowledge on highway design process using CIVIL 3D software
3.	Estimate the rainfall and runoff data and design of highway drainage
4.	Explain the Principles and Design of Flexible and Rigid Pavements according to IRC
	specifications
5.	Skill up for executing pavement construction with quality control and assurance
	along with Plants and Machinery selection

## **UNIT-I**

06 Hours

# **Highway Geometric Design and Cross Section Elements:**

**Highway Geometric Design** Overview of highway - Classification of roads, Highway alignment and Survey, Highway Development in India, Geometric Standards of Highway Design – Sight distance, horizontal and vertical alignment; Geometric design using CIVIL 3D

**Highway Cross Section Elements** – Median, Kerb and kerb shyness, Carriageway, Shoulders, Camber, Embankment Slope, RE walls and Retaining wall, Crash barriers, Drains, Footpath and guardrails, Boundary wall and Fencing, Utilities corridor, Avenue plantations, Right of Way, Project Facilities; Pavement Layers – Components and Functions

**06 Hours** 

# **Pavement Materials and Drainage Design:**

**Pavement material:** Soil classification and desirable properties of Soil, Stone aggregates, Bituminous binders, Bituminous paving mix, Cement, Concrete.

**Drainage Design:** Highway Drainage - Components - types - materials - use, Catchment Analysis & Discharge Calculations - Rainfall data - Return period - Runoff estimation: SCS curve number method - rational formula - Synthetic unit hydrograph - Hydraulic Drain Design

## **UNIT-II**

06 Hours

# **Principles and Design of Pavements:**

**Flexible Pavement:** Introduction, composition, factors governing design, design of flexible pavements as per IRC; Bituminous mix design (Marshall method), IIT Pave Software; Case study - Design Problem

**Rigid pavement:** Introduction, composition, factors governing design, DLC and PQC mix design; design of concrete pavements as per IRC; Joints; Case study – Design Problem

06 Hours

Plants and Machinery, Planning for Pavement Construction: Plants and Machinery: Introduction; Asphalt Hot Mix Plant, Concrete Batching Plant, Wet Mix Macadam Plant, Earthmoving and Excavation Equipment, Paving Equipment, Slipform Paver, Paver Milling and Road Marking Equipment; Factors affecting output of Plant & Equipment; Initiatives to improve Quality

**Construction Planning:** Concept of Highways, Planning; Schedules in Planning; Monitoring; Software in Planning

## **UNIT-III**

06 Hours

# Construction Practices of Flexible and Rigid Pavement: Subgrade and Base Layer:

Construction Practices and Quality Control; Granular Sub-base Construction Activities; Cement Treated Sub-base Construction Activities

**Flexible Layers:** Wet Mix Macadam; Construction Practices of Wet Mix Macadam; Hot Mix Asphalt; Construction Practices of Hot Mix Asphalt Layer, Quality Control of Flexible Layers

**Rigid Layers**: Dry Lean Concrete; Construction Practices of Dry Lean Concrete; Pavement Quality Concrete; Construction Practices of Pavement Quality Concrete, Quality Control of Rigid Layers

**Pavement Evaluation:** Introduction, Pavement Condition Survey, Pavement Evaluation Functional and Structural, Distresses - Flexible and Rigid Pavement, Overlay Design of Flexible Pavement

## **Course Outcomes:** At the end of the course student will be able to

- **1. Develop** an understanding of the highway geometry, cross section elements and pavement layer behavior
- **2. Demonstrate** the highway design process using CIVIL 3D software
- **3. Analyse** rainfall and run off for the highway drainage design
- **4. Carry out** the design of flexible and rigid pavements
- **5. Acquire** skillful knowledge of pavement construction practices, plant and machinery selection and quality control

# Professional Core Courses (Lab)

# **BASIC MATERIALS TESTING LAB**

Course Code: CV2601-1 Course Type: PCC Lab

Teaching Hours/Week (L:T:P: S): 0:0:2:0 Credits: 01

Total Teaching Hours: 26 CIE + SEE Marks: 50+50

# **Teaching Department: CIVIL ENGINEERNG**

# **Course Objectives:**

- **1.** Analyze the various mechanical tests and evaluate the mechanical properties of various building materials.
- **2.** Develop the understanding of mechanical properties of different building materials and their characteristics.

# **List of Experiments**

# Minor Experiments

- 1. Shear Test on Mild steel (single shear & double shear)
- **2.** Impact test.
- **3.** Brinell Hardness Test.
- 4. Vickers Hardness Test
- **5.** Rockwell Hardness Test.
- **6.** Specific gravity Test on Bitumen.

# **Major Experiments**

- **7.** Tension test on mild steel specimen.
- **8.** Compression test on mild steel specimens.
- **9.** Compression test on cast iron.
- **10.** Compression test on wood.
- **11.** Bending Test on Wood specimens under two-point loading.
- **12.** Torsion test on mild steel.

## Course Outcomes: At the end of the course student will be able to

- 1. Conduct shear and impact on metal specimen to assess the mechanical properties.
- **2.** Conduct the tension, compression, torsion tests on metal specimen and bending test on wooden specimen to determine mechanical properties and explain their significance.

COMPUTER AIDED CIVIL ENGINEERING DRAWING							
Course Code:	CV2602-1	Course Type:	PCC Lab				
Teaching Hours/Week (L: T: P: S):	0:0:2:0	Credits:	01				
Total Teaching Hours:	26 CIE + SEE Marks: 50+50						
Prerequisite CV2001-1							
Teaching Department: Civil Engineering							

# **Course Objectives:**

- Develop understanding functional aspects involved in drafting of plan, cross section and elevation of buildings using grid sheet.
- 2. Develop understanding commands in AutoCAD.
- 3. Plan and develop residential building drawing for the client's requirement using AutoCAD.
- 4. Create the connectivity drawing of public buildings using AutoCAD.

# **List of Experiments**

#### Introduction to civil engineering drawing 1.

Functional design of buildings (Residential, Industrial and Public), positioning of various components of buildings, orientation of buildings, building standards and bye laws, set back distances.

## **Basics of AutoCAD**

Drawing tools: Lines, Circle, Arc, Polyline, Multiline, Polygon, Rectangle, Spline and Ellipse.

**Modification tools**: Erase, Copy, Mirror, Offset, Array, Move, Rotate, Scale, Stretch, Lengthen, Trim, Extend, Break, Chamfer and Fillet.

**Usage of Text**: Single line text, Multiline text, Spelling, Edit text.

Special Features: View tools, Layers concept, Dimension tools, Hatching, Customizing tool bars, working with multiple drawings.

# **Use of AutoCAD in Civil Engineering Drawings:**

- Development of plan, elevation, section and prepare a schedule of openings from the given line diagram of residential building (two bed room).
- Connectivity (Bubble) Diagram for the given data of public buildings:
  - i) Primary Health Center ii) School Building iii) Canteen Building.

## **Course Outcomes:** At the end of the course student will be able to

- 1. Develop the Plan, Elevation, Cross Section and prepare a schedule of openings for the given line diagram of residential building using AutoCAD and state its Significance
- 2. Develop and draw the connectivity diagram of public buildings using AutoCAD and state its Significance.

# **EXTENSIVE SURVEY PROJECT AND SOFTWARE LAB**

Course Code:	CV2603-1	Course Type:	PCC Lab
Teaching Hours/Week (L: T: P: S):	0:0:2:0	Credits:	01
Total Teaching Hours:	26	CIE + SEE Marks:	50+50
Prerequisite	CV2004-1		

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

- **1.** To study the data processing, preparation of contour drawings using software.
- **2.** To study the collection and processing data, representing l/s, c/s, design drawings and earthwork calculation.

# **List of Experiments**

- 1. Software Application Lab
  - M.S. Excel, Softwel\_DTM, Auto CAD
- 2. Extensive Survey Project (Project Based Learning)
  - 1. A group consisting of 10 students shall be carrying one project. The project will be distributed equally among students' groups.
  - 2. The students shall submit a report on one project consisting of Survey data, earthwork estimation, plan and relevant design drawings.
- 3. 1. Highway Project (1 km distance)

Preliminary and detailed investigations to align a new or upgrade existence road between two obligatory points. The report should consist of

- a Topographic survey with contour drawings.
- b Key plan with initial alignment.
- c Geometric design (curve design, culvert, drainage)
- d Longitudinal section (at an interval of every 10m) and cross-section (at an interval of every 20m).
- e Earth work calculation.
- 4. 2. Tank Project

Preliminary and detailed investigations to align a new or upgrade existence tank between two obligatory points. The report should consist of

- a. Topographic survey with contour drawings.
- b. Key plan with initial alignment.
- c. Rainfall data in the catchment area / drainage basin.
- d. Capacity contour in the proposed reservoir site.
- e. Bed and bank levels of the streams and canal alignment (L/s and C/s).
- f. Earthwork Calculation.
- 5. 3. Stake out using Total Station

Preliminary and detailed investigations consist of topographic surveying for a strip of land. The report should consist of

Topographic survey with contour drawings.

Preparation of building plan.

Longitudinal and typical cross-section of building.

Front elevation of building.

Preparation of stake out report and centre line for column footing.

Earthwork calculation.

Scheme of Examinations: (CIE)

The student has to choose one project out of three

Evaluation of reports on contouring and modeling : 20 marks
 Evaluation of reports on Earthwork calculation, drawings : 20 marks
 Viva voice : 10 marks

Course Outcomes: At the end of the course student will be able to

- 1. Model the project and represent the contours.
- **2.** Estimate the earthwork, develop drawings and reporting.
- **3.** State the significance of the projects carried.

Geomatics Lab with Project Based Learning									
Course Code:	CV2604-1	Course Type:	PCC Lab						
Teaching Hours/Week (L: T: P: S):	0:0:2:0	Credits:	01						
Total Teaching Hours:	26	CIE + SEE Marks:	50+50						
Prerequisite	CV2004-1								

# **Course Objectives:**

- Inspect Aerial photographs, identify the features and measure them
   Survey, examine and select SOI Topo sheets, Remote Sensing data sets and Meta data from the server or agencies through web browsing and make use of them for composing the maps
   Adapt GPS instrument and make use of GNSS App to survey, determine and mark the position or location of point, line or polygon features.
   Utilize an image processing/GIS software for pre-processing, digitizing, mosaicking, sub setting and visualizing a satellite data, and modify, combine and compile various maps and interpret them
- Identify and mark the land use/land cover pattern, combine and compose various thematic and overlaid maps and analyze the geospatial distribution

# **List of Experiments**

	Elst of Experiments
1.	Stereo Test and Determination of Scale in Aerial photographs
2.	Visual Image interpretation: Identification of features on Aerial Photograph and satellite imageries
3.	Browsing and downloading Topo sheets (SOI Nakshe), Satellite imageries (Google
	Earth/BHUVAN/NRSC/Earth Explorer USGS, etc.) and metadata
4.	GPS & GNSS App demo and data collection-(point, line, and polygon) features
5.	Familiarization with DIP software, Image Display: Visualization of Image data and
	Layer Stacking
6.	Image Rectification and Registration: Georeferencing of Topo sheets & Satellite
	image
7.	Digitization and Interpretation of Land use/Land cover features from the
	Multispectral Satellite Images
8.	Mosaicking and Sub setting of the imagery
9.	Digitization of features (location, roads, drainage, buildings, land boundaries) and
	preparation of thematic maps,
10.	Thematic maps over lay and Map composition (five components)
11.	Project work

## Course Outcomes: At the end of the course student will be able to

**1. Inspect** Aerial photographs, **identify** and **measure** the features.

12.

Project work

2	•	Survey, examine and select SOI Toposheets, Remote Sensing data sets and Meta
		data from the server or agencies through web browsing and <b>make use of</b> them for
		composing the maps.

- **3. Adapt** GPS instrument and **make use of** GNSS App to **survey, determine** and **mark** the position or location of point, line or polygon features.
- **4. Utilize** an image processing/GIS software for preprocessing, digitizing, mosaicking, sub setting and visualizing a satellite data, and **modify, combine** and **compile** various maps and **interpret** them
- 5. **Identify** and **mark** the land use/land cover pattern, **combine** and **compose** various thematic and overlaid maps and **analyze** the geospatial distribution

# **CONCRETE AND HIGHWAY MATERIALS TESTING LAB**

Course Code: CV2605-1 Course Type: PCC Lab

Teaching Hours/Week (L:T:P: S): 0:0:2 Credits: 01

Total Teaching Hours: 26 CIE + SEE Marks: 50+50

# **Teaching Department: CIVIL ENGINEERNG**

# **Course Objectives:**

- **1.** Determine the physical properties of aggregates, bitumen and hardened Concrete, explain their significance.
- **2.** Determine the properties of aggregate and fresh concrete, explain their importance.

# **List of Experiments**

# **Minor Experiments**

- **1.** Aggregate Impact value test.
- 2. Aggregate Crushing value test
- **3.** Compressive strength of concrete.
- **4.** Split tensile test of concrete and Flexural strength of concrete.
- **5.** Penetration Test on Bitumen.
- **6.** Ductility Test on Bitumen.
- **7.** Flash and Fire point Test on Bitumen.
- **8.** Softening point Test on Bitumen.

# **Major Experiments**

- **9.** Shape Test on aggregates (Flakiness and Elongation index Test).
- **10.** Los Angeles Abrasion test on aggregates.
- **11.** Slump test on concrete.
- **12.** Compaction factor test on concrete.

# Course Outcomes: At the end of the course student will be able to

- **1. Conduct** experiments to **determine** the physical properties of aggregates and bitumen, properties of hardened concrete and **explain** their significance.
- **2. Conduct** experiments to **determine** the physical properties of aggregates, properties of fresh concrete and **discuss** their importance.

# **Construction Practice (Department Specific Vocational Course)**

Course Code: CV1551-1 Course Type: PCC Lab

Teaching Hours/Week (L:T:P: S): 0:0:2:0 Credits: 01

Total Teaching Hours: 26 CIE + SEE Marks: 50+50

## **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	To give idea of basic of setting out operations and construction of masonry units.
2.	To estimate the quantity of steel reinforcement required for different elements of
	work.
3.	To realize the importance of Plumb bob, mercury level and tape in the construction
	activities.
4.	To create the awareness about various construction activities related in the
	construction of a building.
5.	To create the awareness about various tests and repair methods used in buildings.

# **List of Experiments**

- 1. Study of construction tools, plumbing tools and sanitary fixtures.
- 2. Demonstration of Safety kits and accessories used at construction site- Personal Protective Equipment (PPE).
- **3.** Setting out of center line for a small building.
- 4. Construct one thick brick wall in English bond for a height of Two layer.
- 5. Construct one thick brick wall in Flemish bond for a height of Two layer.
- **6.** Prepare Bar Bending Schedule & Fabrication of reinforcements for a doubly reinforced beam.
- 7. Prepare Bar Bending Schedule & Fabrication of reinforcements for a lintel with cheija.
- **8.** Prepare Bar Bending Schedule & Fabrication of reinforcements for a column with footing Mat.
- **9.** Plastering for a new masonry wall surface(1 square meter area) with CM (1:6)
- **10.** Prepare a plan and fabricate for PVC pipe layout using valves, fixtures, adhesive solvents and fittings from over head tank to wash basin/tap and excute it.
- **11.** Identification of retention of pressure in Plumbing system.
- **12**.

## Course Outcomes: At the end of the course student will be able to

- **1.** Give basic idea of setting out operations, bar bending schedule and use of construction tools.
- 2. Study the plumbing accessories and its applications in Civil Engineering buildings.

DESIGN OF MASONRY STRUCTURES									
Course Code:	CV2201-1	Course Type	PEC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
Total Teaching Hours	40	CIE + SEE Marks	50+50						
Prerequisite	CV2001-1								

# **Course Objectives:**

1.	Know about 'Masonry', its use, advantages and disadvantages
2.	Have clear knowledge of different types of 'Masonry units', types and grades of
	'Mortar' as per IS Code, properties of masonry units and mortar.
3.	Know the strength of masonry unit and masonry prism, computation of permissible
	strength of masonry for different types of masonry structures considering factors like
	'Effective height',' Effective length', 'Slenderness ratio' and 'Eccentricity ratio'.
4.	Design different types of masonry structures selecting suitable masonry units and
	mortar using IS 1905 (revised in 2002) and SP 20.
5.	Know about the use of (i) Reinforced Masonry, (ii) Composite Masonry (iii) Confined
	Masonry and (iv) 'In filled frames', their advantages and disadvantages.

## **UNIT-I**

## MASONRY UNITS, MATERIALS, TYPES & MASONRY CONSTRUCTION 15 Hours

Brick, stone and block masonry units – strength, modulus of elasticity, water absorption and uses.

Mortar: classification and properties, selection.

Defects and errors in masonry construction cracks in masonry, types, reasons for cracking, methods of avoiding cracks.

Strength and Stability of concentrically loaded masonry walls, effect of unit strength, mortar strength, joint thickness, rate of absorption, effect of curing, effect of ageing, workmanship, strength formulae and mechanism of failure for masonry subjected to direct compression.

#### **UNIT-II**

# **Permissible Stresses and Design Considerations**

15 Hours

Permissible compressive stress, stress reduction and shape reduction factors, increase in permissible stresses for eccentric vertical and lateral loads, permissible tensile and shear stresses.

Load considerations for masonry: walls carrying axial load, eccentric load with different eccentric ratios—walls with openings and free standing wall.

**Design considerations:** Effective height of walls and columns, opening in walls, effective length, effective thickness, slenderness ratio, eccentricity, load dispersion, arching action and lintels.

UNIT-III	
	10 Hours

Design of load bearing masonry walls for building up to 3storeys using IS 1905 and SP20 procedure.

Reinforced masonry and its application, flexural and compression elements of reinforced masonry, shear walls.

Composite masonry walls, composite wall beam elements, infilled frames.

## Course Outcomes: At the end of the course student will be able to

Know about the masonry units and mortar, properties of different masonry units, 1. mortar and Defects, errors in masonry construction. (Explain the types, properties, uses, defects, crack and its remedial measures in masonry structures) Analyze the emerging permissible compressive, tensile and shear stress and factors 2. influencing them for masonry elements. Explain permissible stresses and design criteria as per IS: 1905 and SP-20. 3. **Determine** the effective height of walls, columns, effective length, effective thickness 4. of wall and factors affecting them. Analyze and design load bearing masonry walls for buildings up to three stories 5. using IS: 1905 and SP-20 and **understand** the concept of reinforced masonry.

MATRIX METHODS OF STRUCTURAL ANALYSIS											
Course Code:	CV2202-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	CV2103-1 CV2104-1										

# **Course Objectives:**

- **1.** To **define** the flexibility and **development** of flexible matrix for defined coordinates for structural system.
- **2.** To **analyze** the trusses, continuous beams and rigid plane frames by flexibility matrix method.
- **3.** To **define** the stiffness and **development** of stiffness matrix for the defined coordinates for structural system.
- **4.** To **analyze** the trusses, continuous beams and rigid plane frames by stiffness matrix method.
- **5.** To **summarize** the direct stiffness method, local and global coordinates and **analyze** the trusses, continuous beams and rigid frames.

#### **UNIT-I**

## **Flexibility Matrix Method:**

16 Hours

Introduction to flexibility method, Element flexibility matrix, Principle of contragradience, and Force Transformation Matrix, Member Flexibility matrix, Construction of structure flexibility matrix. Matrix determination of the displacement vector, Determination of member forces. *Analysis of trusses by flexibility method using force transformation matrix.* 

Analysis of axially rigid continuous beams and *rigid plane frames with axially rigid members* by flexibility method using Force transformation Matrix.

#### UNIT-II

## **Stiffness Matrix Method:**

15 Hours

Fundamentals of the stiffness method, equivalent joint loads, Displacement Transformation matrix. Member stiffness matrix, Total or System stiffness matrix, *Truss analysis by stiffness method using Displacement Transformation Matrix*. Continuous Beam and *rigid frame analysis with axially rigid members by stiffness method using displacement transformation matrix*.

## **UNIT-III**

## **Direct Stiffness Method:**

09 Hours

Introduction to direct stiffness method, local and global co-ordinate system, transformation of variables, transformation of the member displacement matrix, force matrix, stiffness matrix, transformation of the stiffness matrix of the member of a truss, transformation of the stiffness matrix of the member of the rigid frame, overall stiffness matrix, boundary conditions, computation of internal forces.

Analysis of pin jointed truss, rigid plane frames and continuous beams by direct stiffness method.

Course Outcomes:	At the and of t	ha course stude	ant will he able to
Course Outcomes.	ALTHE CHOOL	HE COUISE STUDI	ant will be able to

- **1. Define** flexibility matrix and **develop** flexibility matrix for assigned coordinates.
- **2. Determine** the member forces in trusses, **analyze** continuous beams and rigid plane frames by flexibility matrix method.
- **3. Define** stiffness matrix and **develop** stiffness matrix for assigned coordinates.
- **4. Determine** the member forces in trusses, **analyze** continuous beams and rigid plane frames by stiffness matrix method
- **5. Analyze** the trusses, continuous beams and rigid plane frames by direct stiffness method.

STRUCTURAL DYNAMICS										
Course Code:	CV2203-1	Course Type	PEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50							
Prerequisite	-									

# **Course Objectives:**

- 1. **Comprehend** principles of vibration and elementary components of a vibratory
- 2. **Comprehend** the behaviour of engineering structures subjected to dynamic forces.
- 3. **Analyze** undamped and damped free vibration of a single degree of freedom system
- 4. **Analyze** undamped and damped forced vibration of a single degree of freedom system
- 5. Analyze MDOF systems.

#### **UNIT-I**

15 Hours

Introduction to Structural Dynamics: Laws of motion, D'Alembert's Principle, Stiffness of springs in series and parallel, Mass moment of inertia, Simple harmonic motion, Vibration – Types, Parts of a vibrating system, Degrees of freedom, Fundamentals of free vibration.

Free vibration: Undamped and damped (single degree of freedom system), Logarithmic decrement.

#### UNIT-II

15 Hours

**Forced Vibration:** Undamped and damped (single degree of freedom system) – Steady state response, Dynamic magnification factor, response to harmonic loading, Rotational and reciprocating unbalance, Force transmissibility, Force transferred to foundation, Forced vibration and its effect on machine foundation

## **UNIT-III**

10 Hours

Multi Degree of Freedom (MDOF) Systems: Response to Free and forced vibration – natural frequencies, determination of Eigen values and Eigen vectors – Orthogonality principle, Shear buildings modelled as MDOF systems. Forced undamped and damped vibration of shear buildings – Modal superposition method.

- 1. **Explain** the principles of vibration and elementary components of a vibratory system.
- 2. **Discuss** the behavior of engineering structures subjected to dynamic forces.
- 3. **Analyze** undamped and damped free vibration of a single degree of freedom system.

- **4. Analyze** undamped and damped forced vibration of a single degree of freedom system.
- **5. Analyze** the given MDOF system.

THEORY OF ELASTICITY											
Course Code:	CV2204-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	CV2102-1	•									

## **Course Objectives:**

1.	Understand the concept of plane stress and plane strain problems.								
2.	Develop compatibility equations for strains and strain measurements.								
3.	Formulate and solve two dimensional problems in case of bending and develop Airy's stress								
	function equations								
4.	Derive compatibility equations in polar coordinates.								
5.	Analyze the stress distribution in axisymmetric problems and the effect of circular hole on								
	the stress distribution.								

# UNIT-I

15 Hours

**Introduction to elasticity:** Stress and strain relations, mathematical theory continuum, stress and strain at a point, constitutive laws, generalized Hooke's law, strain-displacement relations, stress tensor, stress transformation, stress invariants, strain tensor, strain invariants, plane stress and plane strain, principal stresses and strains.

Analysis of strain: Formation and solutions to differential equations, measurement of surface strains – strain rosettes, compatibility concept – need and physical significance, compatibility equation in terms of strains

#### **UNIT-II**

15 Hours

**Two dimensional problems in Cartesian coordinates**: compatibility equations for plane stress and plane strain cases, Airy's stress function – Polynomial stress functions. *Bending theory of beams-assumptions, bending stresses.* Bending of a cantilever beam subjected to end load and UDL, Simply supported beam subjected to UDL, Displacements in Cantilever and simply supported Beams.

**Two dimensional problems in polar coordinates**: Strain-displacement relations – Equations of equilibrium, Compatibility equation, Stress function.

#### **UNIT-III**

10 Hours

**Axisymmetric Stress Distribution** stress - strain relations for thin and thick cylinders, radial and circumferential stress distribution, Thick discs and cylinders, Rotating discs

**Circular Hole in a plate-** Effect on Stress Distribution subjected to Tension, compression and shear, Stress concentration factor

- **1. Illustrate** mathematical representation of stresses, strains in continuum and **analyze** the beams for plane stress, plane strain conditions
- **2. Formulate** compatibility equation in terms of strains and **measure** the strains in strain rosettes.

3.	<b>Develop</b> the differential equations and <b>Solve</b> two dimensional problems in rectangular
	coordinates
4.	<b>Develop</b> the differential equations and <b>Solve</b> two dimensional problems in polar
	coordinates.
5.	<b>Determine</b> the stress distribution under axisymmetric loading in cylinders, rotating discs and
	analyze the effect of circular hole in a plate

DESIGN OF PRESTRESSED CONCRETE STRUCTURES												
Course Code:	CV2205-1	Course Type	PCC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
Total Teaching Hours	40	CIE + SEE Marks	50+50									
Prerequisite	CV2005-1											

# **Course Objectives:**

post-tensioned sections.

1.	Summarize the concept of prestress, materials and types of pre-stressing.
2.	Analyse the section for flexure and losses of pre-stress in concrete under different loading
	condition.
3.	<b>Explain</b> deflection and analyse pre-stressed concrete members.
4.	Analyse the section for flexure, shear in reference with IS code recommendations
5.	<b>Solve for</b> the permissible stress, Pre-stressing force and Eccentricity in a pre-tensioned and

# UNIT-I

16 Hours

**MATERIALS:** High strength concrete and steel, stress-Strain characteristics and properties, Pretensioning and Post-tensioning systems, Tensioning methods and End Anchorages.

**BASIC PRINCIPLES OF PRESTRESSING:** Fundamentals, Load Balancing, Stress Concepts, Pressure Line Concept.

**ANALYSIS OF SECTIONS FOR FLEXURE:** Stresses in concrete due to pre-stress and loads, Cable Profiles.

LOSSES OF PRE-STRESS: Pre-tensioning and post tensioning, determination of jacking force.

#### UNIT-II

14 Hours

**DEFLECTIONS:** Short term and long-term, Methods of reducing deflection, Deflection limits as per IS: 1343- 2012, elastic deflections under transfer loads and due to different cable profiles, effect of creep, load verses deflection curve.

**LIMIT STATE OF COLLAPSE:** Flexural and Shear strength of sections, IS Code recommendations, shear resistance of sections, shear reinforcement, limit state of serviceability – control of deflections and cracking.

#### **UNIT-III**

10 Hours

**DESIGN OF BEAMS:** pre-tensioned and post-tensioned symmetrical and asymmetrical sections. *Permissible stress, prestressing force and eccentricity.* 

- 1. Summarize the concept, basic materials and types of pre-stressing systems.
- **2. Solve for** the stresses and losses in the pre-stressed members.
- **3. Explain** Short-term and Long-term deflections and **Evaluate** the deflection under given loading condition
- **4. Analyse** the section for flexure, shear under limit state of collapse and serviceability for pre-stressed concrete members.
- **5. Evaluate** pre-tensioned and post tensioned beam components for permissible stress, Pre-stressing force and Eccentricity.

ADVANCED RCC DESIGN											
Course Code:	CV2301-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50								
Prerequisite	CV2005-1	•	·								

# **Course Objectives:**

4	Analyze of clabs by yield line approach and Design flat clab									
I.	Analyze of slabs by yield line approach and Design flat slab.									
2.	Analyze and design of grid slabs by approximate method.									
3.	Design the continuous beams with moment redistribution									
4.	Analyze and design Silos and Bunkers									
5.	Understand the behavior of shells and folded plates.									

#### UNIT-I

16 Hours

**Analysis of Slabs:** Boundary conditions and yield line pattern at failure, Yield line analysis of slabs with equilibrium method and virtual work method.

Design of flat slabs by Direct Design Method (with drops)

#### **UNIT-II**

14 Hours

Design of grid floors

Design of continuous beams with redistribution of moments

#### **UNIT-III**

10 Hours

**Silos and Bunkers:** Components, design using Janssen's Theory and IS: 456-2000 Method Shells and folded plate roofs – Types, forms and structural behavior.

Course Outcomes: At the end of the course student will be able to

	1.	Analyze slabs by yield line approach.
	2.	Design flat slab by direct method.
	3.	Analyze and design grid slabs by approximate methods.
ſ	4.	Design the continuous beams with moment redistribution.
	5.	Analyze and design silos and bunkers and explain the behavior of shells and folded
		plates.

DESIGN OF BRIDGES											
Course Code:	CV2302-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	CV2005-1, CV2205-1										

# **Course Objectives:**

1.	Learn the components and classification of bridges.
2.	Understand the IRC codal provisions for bridge design.
3.	Learn the concepts in analyzing & designing the pipe and slab culverts.
4.	Understand the analysis & design of slab and girder of T-beam bridges.
5.	Understand the importance of bearings and joints in bridges.

#### UNIT-I

16 Hours

**INTRODUCTION TO BRIDGES**: History, components, classification, selection of site, linear waterway, scour, afflux.

Foundation: types of foundation (Pile, Raft, Well and Caisson – Brief Description only) cofferdam.

Substructure: types of abutment, piers, wing walls– forces acting on them and empirical designs – bank connection and protection works

BRIDGE LOADING STANDARDS: Loads to be considered while designing road bridges as per IRC (Indian Road Congress), impact factors, Indian railway bridge loading standards.

#### **UNIT-II**

15 Hours

**CULVERTS:** Computation of water discharge, design of pipe culverts and slab culverts for IRC class AA and class-A loading.

**T-BEAM BRIDGES:** Pigeaud's method for computation of interior slab moments, design of interior slab panel of T-beam bridge for IRC class AA tracked vehicles, courbon's method for computation of moments in girders.

#### **UNIT-III**

09 Hours

#### **BEARINGS, JOINTS AND APPURTENANCES**

Importance of bearings, bearings for slab bridges, bearings for girder bridges, expansion bearings, fixed bearings, elastomeric bearings, bearings for skew bridges, joints and appurtenances.

1.	Explain the components of bridges and classify them.										
2.	Explain the IRC codal provisions for road and railway bridge design.										
3.	Estimate the water discharge, analyse and design the pipe and slab culverts as per IRC										
	6 : 2016 part II, IS 458 : 2003, IS 456 : 2000 and IRC 21 : 2000.										

- **4.** Analyse and Design the interior slab panels and girders of T Beam bridges as per pigeaud's method and courbon's method respectively using IS 456 : 2000 and IRC 6 : 2016 part II.
- **5.** Explain the importance and types of bearings and joints in bridges.

EARTHQUAKE RESISTANT STRUCTURES								
Course Code:	CV2303-1	<b>Course Type</b>	PEC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50					
Prerequisite	CV2203-1	•	·					

# **Course Objectives:**

1.	To provide the basic knowledge of Earthquake and seismic zoning of India.
2.	To study the performance of buildings due to irregularity during Earthquake
3.	To apply the knowledge of mathematics, science and engineering to analyze linear
	structural systems subjected to earthquake forces.
4.	To study the detailing of Earthquake resistant RCC buildings and to gain basic
	knowledge on geotechnical earthquake engineering.
<b>5</b> .	To study the code provisions for Earthquake resistant masonry and earthen
	buildings. And also to apply the knowledge of mathematics, science and engineering
	to analyze linear structural systems of masonry buildings.

# **UNIT-I**

16 Hours

#### Introduction:

Engineering Seismology – Internal structure of earth, Geology of Earth, Definitions, Classification of Earthquakes, Causes of Earthquakes, Seismic waves, Theory of plate tectonics, Elastic rebound theory, Intensity and Magnitude of earthquake, Seismic measuring equipment's.

# **Seismic Response of Buildings:**

Effect of Structural Irregularities on seismic performance of RC buildings. Vertical irregularity and plan configuration problems, Seismo resistant building architecture –lateral load resistant systems, Building characteristics.

#### **UNIT-II**

14 Hours

# **Earthquake Resistant Design Concepts:**

Seismic zones of India, Design Philosophy and principle of Earthquakes Resistant Design, Guidelines for Earthquakes Resistant Design. Equivalent static force method-Assumptions, evaluation of Earthquake forces as per IS: 1893-2016. Dynamics analysis procedure-Response spectrum Method. Liquefaction—Causes and remedial measures.

#### **UNIT-III**

10 Hours

**Seismic Analysis of Masonry Buildings** –*Lessons learnt from past earthquakes on the performance of masonry and earthen buildings.* Elastic properties of structural masonry, Failure of masonry building- Causes, failure modes. Steps for improving seismic performance of masonry buildings- Design considerations, provisions of IS: 4326-1993 for design of masonry buildings.

# Course Outcomes: At the end of the course student will be able to

- **1. Acquire** knowledge on basic concepts of earthquake engineering and seismic zones of India.
- **2. Explain** the suitability of building plan and configuration for an earthquake prone area.
- **3. Determine** earthquake forces in a building as per IS 1893:2016 provisions and **analyze** the failure of RC buildings.
- **4. Analyze** the structure using dynamic analysis procedure and **acquire** knowledge of geotechnical earthquake engineering.
- **5. Analyze** and **design** the masonry buildings subjected to seismic forces.

FINITE ELEMENT METHOD OF STRUCTURAL ANALYSIS									
Course Code:	CV2304-1	Course Type	PEC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50						
Prerequisite	CV2202-1								

# **Course Objectives:**

1.	Get an idea how strain energy concept can be used for FEA method								
2.	Analyse the components by 2D formulation and element discretization.								
3.	Demonstrate numerical evaluation of stiffness to find stresses								
4.	Study the concepts of Isometric and jacobian matrix.								
5	Finding solutions by numerical Integration								

#### **UNIT-I**

16 Hours

Finite element method, steps in finite element analysis, displacement approach, stiffness matrix and boundary conditions

Theory of elasticity concepts, Energy principles

#### **UNIT-II**

15 Hours

2D formulations; Constant Strain Triangle, Linear Strain Triangle, 4 and 8 noded quadrilateral elements, Numerical Evaluation of Element Stiffness -Computation of Stresses, Finding solutions for Static Condensation of nodes

#### **UNIT-III**

09 Hours

**Isoparametric concepts:** isoparametric, sub parametric and super parametric elements, Jacobian transformation matrix, Stiffness Matrix of Isoparametric Elements, Finding solutions to Numerical integration by Gaussian quadrature rule for one, two- and three-dimensional problems

### Course Outcomes: At the end of the course student will be able to

- 1. Explain the basic concept of energy principles and steps involved in FEA method and Analyze2D formulation for 4 and 8 noded quadrilateral elements.
- **2.** Determine static condensation of nodes.
- **3.** Analyze and Evaluate element stiffness and stresses by numerical approach.
- **4.** Explain Isoparametric concepts applying Jacobian transformation matrix and Stiffness Matrix.
- **5.** Analyze and Find solutions for one, two and three dimensional elements by Numerical integration.

NUMERICAL METHODS IN CIVIL ENGINEERING									
Course Code:	CV2305-1	Course Type	PEC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50						
Prerequisite	-	•							

# **Course Objectives:**

1.	Understand different numerical techniques to solve civil engineering problems									
2.	Understand different methods solving simultaneous and transcendental equations									
3.	Understand various numerical integration techniques for computing slope and									
	deflections of determinate beams									
4.	Explain numerical methods for solving ordinary differential equations									
5	Evolain finite difference techniques									

#### **UNIT-I**

16 Hours

# INTRODUCTION, SCOPE AND IMPORTANCE OF THE SUBJECT:

Solution of linear simultaneous equations by the following methods:

(i) Gaussian elimination, (ii) Gauss-Jordan matrix inversion, (iii) Gauss-Siedel, (iv) Factorization. Application of the above methods in solving problems by slope-deflection method applied to beams and frames, problems in construction planning.

Finding the roots of nonlinear algebraic and transcendental equations by (i) Bisection method, (ii) Newton-Raphson method. Application of the above methods to solve problems in structural engineering, hydraulics, geotechnical engineering and environmental engineering.

#### **UNIT-II**

15 Hours

**NUMERICAL INTEGRATION TECHNIQUES:** (i) Trapezoidal rule, (ii) Simpson's one third rule. Application of the above methods for computing the area of BMD for statically determinate beams. Computation of slope and deflection in statically determinate beams by New Marks method.

Solution of ordinary differential equations by (i) Euler's method, (ii) 4th order Runge-Kutta method. Application of the above methods to solve civil engineering problems.

#### **UNIT-III**

09 Hours

Finite difference techniques to solve problems in structural mechanics. Analysis of statically determinate and indeterminate beams,

- **1.** Develop the linear equations in solving problems related to Civil Engineering and solve them by different techniques
- 2. Determine the Eigen values and Eigen roots for the given data.

- **3.** Find the area of bending moment diagram for different problems on statically determinate structures and computing slope and deflection of statically determinate structures by adopting numerical integration techniques
- **4.** Formulate and solve differential equations for Computation of slope and deflection
- **5.** Analyze the determinate and indeterminate beams using finite difference method

# PROFESSIONAL ELECTIVE COURSES (GEOTECHNICAL AND TRANSPORTATION ENGINEERING

EARTH RETAINING STRUCTURES								
Course Code:	CV2211-1	Course Type	PEC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50					
Prerequisite	CV2006-1	•	·					

# **Course Objectives:**

- **1.** Know about types of retaining wall, forces acting on them and possible modes of failure of each type.
- 2. Understand how to analyze stability of different types of retaining wall, and to study different types of sheet pile walls and how to design them under different soil conditions.
- **3.** Differentiate between cantilever sheet pile wall and anchored sheet pile wall with reference to the design and construction for given field conditions.
- **4.** Study and understand lateral earth pressure distribution on sheeting of braced system in different soil types.
- 5. Study different components of braced systems, their selection and design them for given soil and depth of excavation. Also, to study the different types of coffer dams and the usefulness under the different situations.

#### **UNIT-I**

16 Hours

**RETAINING WALLS:** Types of retaining wall and forces on each type of wall. Modes of failure of retaining walls - sliding, overturning and bearing. Stability analysis and principles of the design of retaining walls - Gravity retaining walls, *Cantilever retaining walls, counter fort retaining walls (no structural design). Drainage from the backfill.* 

**BULK HEADS: Cantilever sheet pile walls** *Types of sheet pile walls.* Cantilever sheet pile wall in cohesion-less soils. Cantilever sheet pile wall in clay. Design problem in each case.

#### **UNIT-II**

15 Hours

#### **BULK HEADS: Anchored Sheet Pile Walls:**

Anchored sheet pile with free earth support in cohesion-less and cohesive soil. Bulkheads with fixed earth support method – *Types, locations and design of anchors*.

**BRACED CUTS:** Introduction. Lateral earth pressure on sheeting, Different types of sheeting and bracing systems. *Design of various components of bracings*.

#### **UNIT-III**

09 Hours

**COFFER DAMS & CELLULAR COFFER DAMS: Introduction**. Introduction – *types of cofferdams* - Design of cellular cofferdams on rock by Tennesse Valley Authority (TVA) method – safety against sliding, slipping, overturning, vertical shear and stability against bursting

Design of cellular coffer dam on soil -safety against sliding, slipping, overturning, vertical shear and stability against bursting.

# Course Outcomes: At the end of the course student will be able to

- **1.** Explain and analyze retaining wall, the force acting on earth type wall and possible mode of failure of each type.
- **2.** Explain and design cantilever type sheet pile wall.
- **3.** Explain anchored sheet pile walls, its advantage over cantilever sheet pile wall.
- **4.** Analyze and identify lateral earth pressure distribution on sheeting of braced system for earth trench in different soil types.
- **5.** Analyze and design coffer dams and cellular cofferdams.

Ground Improvement Techniques										
Course Code:	CV2212-1	<b>Course Type</b>	PEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite	CV2006-1	•								

# **Course Objectives:**

- 1. Know the objectives of soil improvement, classification of ground improvement techniques and to select the best method or technique for the existing condition.
- 2. Know \_Hydraulic modification', its aim, principle and techniques such as gravity drain, lowering of water table, multistage well point, vacuum dewatering etc.
- **3.** Define chemical modification, its aim, special effects, different methods or techniques.
- **4.** Have a clear knowledge regarding —Groutingll, effects of grouting, Chemicals and materials used, and types of grouting. Grouting procedure and applications of grouting.
- **5** Know the concepts and use of recent methods in Soil reinforcement.

#### **UNIT-I**

# **GROUND IMPROVEMENT**

06 Hours

Definition, Objectives of soil improvement. Classification of ground improvement techniques. Factors to be considered in the selection of the best soil improvement technique.

# **MECHANICAL MODIFICATION**

10 Hours

Type of mechanical modification, compaction, Principle of modification for various types of soils. Effect of grain size distribution on compaction for various soil types like BC soil, lateritic soil, coarse-grained soil, micaceous soil. Effect of compaction on engineering behaviour like Compressibility, Swelling and Shrinkage, Permeability, relative density, liquefaction potential. Field compaction - static, dynamic, impact and vibratory type. Specification of compaction. Tolerance of compaction.

# UNIT-II

# **HYDRAULIC MODIFICATION**

07 Hours

Definition, aim, principle, techniques, gravity drain, lowering of water table, multistage well point, vacuum dewatering, and design of dewatering system including pipe line effects of dewatering. Drainage of slopes, preloading, vertical drains, numerical problems on design of vertical drains, sand drains, Prefabricated vertical drains sand drains, Electro osmotictic dewatering.

#### **CHEMICAL MODIFICATION**

07Hours

Definition, aim, special effects, and methods, Techniques -sandwich technique, admixtures, cement stabilization. Hydration - effect of cement stabilization on permeability, Swelling and shrinkage. Criteria for Lime stabilization, cement stabilization. - Suitability, process, special effects, criteria. Other chemicals, chlorides, hydroxides, lignin, hydrofluoric acid. Fly ash in

cement stabilization, Properties of chemical components, reactions and effects. Bitumen, tar or asphalt in stabilization.

#### **UNIT-III**

# GROUTING 04 Hours

Introduction, Effects of grouting, Chemicals and materials used, Types of grouting, Grouting procedure and Applications of grouting.

# **MISCELLANEOUS METHODS (only Concepts)**

06 Hours

Introduction, Soil reinforcement. Thermal methods, Ground improvement by confinement - Crib walls, Gabions & Mattresses, Anchors, Rock bolts and soil nailing Geo-synthetics in soil modification, Micro piles. Case studies.

# Course Outcomes: At the end of the course student will be able to

- Understand the objectives, necessity and scope of ground improvement techniques
   Identify and Implement the various methods of mechanical modifications in the soil improving techniques.
- **3.** Explain the methods involved in ground modification by hydraulic methods.
- **4.** Identify and apply the chemical modifications techniques in field conditions.
- **5.** Explain techniques related to grouting and other miscellaneous soil reinforcement techniques.

HIGHWAY GEOMETRIC DESIGN											
Course Code:	CV2213-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	CV2108-1		·								

# **Course Objectives:**

1.	Understand the different road design elements factors as per IRC Standards.								
2.	Acquire the knowledge in different cross-sectional elements of highway.								
3.	Understand and calculate the different sight distances, set back distance.								
4.	Understand the elements and calculate the length of horizontal and vertical								
	alignment.								
5.	Identify different intersection, road markings and design the drainage systems.								

# **UNIT-I**

16 Hours

**INTRODUCTION:** *Objectives, requirements,* design control factors: topography, design speed, design vehicle, traffic capacity, volume, environment and other factors - IRC specifications, PCU concept for design.

**CROSS SECTION ELEMENTS:** Pavement surface characteristics –friction, skid resistance, pavement unevenness, light reflecting characteristics, camber: *objectives*, types, methods, pavement width carriageway, kerb, medians, shoulders, foot paths, parking lanes, service roads, cycle tracks, driveways, *guard rails, width of formation, right of way*, design of road humps as per IRC Specification.

#### **UNIT-II**

15 Hours

**SIGHT DISTANCES:** Factors and problems: stopping and overtaking, at intersections, set back distances at curves.

**HORIZONTAL AND VERTICAL ALIGNMENT:** Horizontal alignment: *objectives, requirements*, design elements, super elevation, extra widening of pavements at curves, transition curve: types, evaluating length; vertical alignment: *gradient*, design criteria, types, design of summit and valley curves, design standards for hill roads.

#### **UNIT-III**

09 Hours

**INTERSECTIONS:** *Types*, elements, design considerations of at-grade intersection, grade separations and interchanges.

**ROAD MARKINGS**: Objects, materials, classifications.

**HIGHWAY DRAINAGE:** *Importance, Requirements of surface and subsurface drainage,* design of cross sections and filter material.

<b>Course Outcomes:</b>	At the er	nd of the c	ourse student	will be able to
Course Outcomes.	AL IIIE EI	io oi ine c	onise singem	will be able to

- **1. Explain** the road design control factors as per IRC guidelines.
- **2. Explain** the road surface characteristics, road side amenities and **illustrate** the design aspects of road hump as per IRC guidelines.
- **3. Determine** the sight distances and set back distance at highway curves.
- **4. Design the** horizontal, vertical alignment elements in highway and hill roads.
- **5. Illustrate** the types of intersection, types of road markings, highway drainages and **design** the highway drainage cross section and filter material.

ROAD SAFETY AND MANAGEMENT										
Course Code:	CV2214-1	<b>Course Type</b>	PEC							
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03							
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50							
Prerequisite	CV2108-1									

# **Course Objectives:**

- 1. Get awareness about the global, national and regional road crash scenario and their impacts
- **2.** Identify the risk factors associated with crash involvement and its severity
- **3.** Demonstrate the traffic management measures to minimize road crash
- **4.** Understand the methods of collection and analysis of crash data
- **5.** Gain the knowledge of the procedure for performing road safety audit.

#### **UNIT-I**

#### INTRODUCTION TO ROAD SAFETY ENGINEERING

07 Hours

Over view of road safety - Global road safety scenario and pattern - global trends and projections - national and state road safety level - problems in road safety in developing countries magnitude, socioeconomic and health effects.

# TRAFFIC ELEMENTS 09 Hours

Characteristics of Road user, Motor vehicle, Roadway- relationship between elementshuman factors governing road user behavior- risk factors for traffic accidents- exposure to risk- crash involvement- crash severity- post crash injury outcomes

#### UNIT-II

#### ANALYSIS AND PREVENTION OF ACCIDENTS

10 Hours

Collection of accident data- Statistical methods for analysis of accident data- Speed in relation of safety- Weather and its effects on accidents- Vulnerable road users safety- parking influence on accidents.

#### TRAFFIC MANAGEMENT MEASURES FOR ACCIDENT PREVENTION

06 Hours

Legislation, Enforcement, Education and Propaganda, Formulating and implementing road safety policy

#### **UNIT-III**

#### **ROAD SAFETY IMPROVEMENT PROGRAM**

08 Hours

Road safety audit (RSA) - Procedure in road safety audit- design standards- audit tasks-stages of road safety audit- key legal aspects. Road design issues in RSA's – structuring and preparation of audit report.

- **1. Identify** the factors contributing to accidents
- **2. Collect** the necessary data pertaining to road crashes and **prepare** comprehensive accident crash database.
- **3. Perform** the statistical analysis of accident crash data.

- **4. Describe** the traffic management measures for accident prevention
- **5. Explain** the road safety audit and **prepare** a detailed audit report.

TRAFFIC ENGINEERING											
Course Code:	CV2215-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50								
Prerequisite	CV2108-1	•									

# **Course Objectives:**

- Understand the fundamentals of traffic engineering, scope and its uses in the actual field condition.
   Understand the significance of various traffic studies as per IRC guidelines.
   Understand the flow theories and its probabilistic approach in connection with traffic
- engineering.
   Acquire the knowledge of traffic signals design and other traffic regulatory methods as per
- **5.** Impart the basic knowledge on traffic rotary, street lighting, arboriculture and intelligent transport system.

#### UNIT-I

16 Hours

**Introduction to Traffic Engineering**: *Scope*, road user and vehicle characteristics- static and dynamic, *reaction time of driver*.

**Traffic parameter Studies and Analysis:** *Objectives*, method of study- definition, data collection and analysis (traffic volume, spot speed, origin and destination, speed and delay), parking- on street and off-street parking, accidents- *causes*, analysis and *measures*.

#### **UNIT-II**

15 Hours

**Traffic Flow Theories**: Green shield theory, Goodness of fit-correlation and regression analysis (linear only), Queuing theory, car following theory, Traffic forecast- simulation technique.

**Traffic Regulation and Control**: *Controls-Driver, Vehicle and Road*, Traffic Regulations- One Way Streets, *Traffic Signs, Road Markings*, Traffic signals- types, design principles (Webster's and IRC Method).

#### **UNIT-III**

09 Hours

**ROAD INTERSECTIONS AND MANAGEMENT:** Road intersection-Importance, classification, Rotary design, *Highway lighting, Road side Arboriculture*, Intelligent Transport system.

- **1. Explain** the Scope and characteristics of traffic engineering.
- 2. Illustrate the importance and methods in Traffic studies.
- **3. Summarize** the Traffic flow theories and **explain** the importance.
- **4. Apply** the design principles of traffic signals and **outline** the traffic regulation measures.
- **5. Design** the rotary intersection and **explain** the importance of highway lighting, arboriculture and ITS.

# **SOIL EXPLORATION & GROUND IMPROVEMENT TECHNIQUES (Industry**

# **Supported Course – Geosmart International Pte Ltd, Singapore)**

Course Code:	CV2216-1	Course Type	PEC
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	Understand the underlying concepts of type of soil and its suitability for									
	construction work.									
2.	Understand various field tests and their suitability to field conditions.									
3.	Develop ability to analyze weak and compressible soil and provide proper									
	treatment to improve its characteristics.									
4.	Understand the underlying principle in dynamic consolidation. Select proper method									

# **UNIT-I**

for anchors, grouting and vacuum consolidation.

Introduction 06 Hours

Principles of exploration: Geophysical and sounding methods, Modern methods of boring and sampling; Preservation and transportation of samples; Sampling records, Soil profiles.

# **Soil Exploration Methods**

10 Hours

Various types of field tests; Instrumentation; Investigation below sea/river bed; offshore investigation; investigation; interpretation of exploration data and report preparation; economics of field testing & lab testing.

#### **UNIT-II**

Soil Stabilization 01 10 Hours

Engineering properties of soft & weak and compressible deposits; principles of treatment; Methods of soil improvement-lime stabilization and injection; thermal, electrical and chemical methods.

Soil Stabilization 02 06 Hours

Dynamic consolidation; vibroflotation; compaction by blasting; pre-consolidation with vertical drains; Granular piles; soil nailing.

#### **UNIT-III**

Soil Stabilization 03 06 Hours

Anchors; Grouting; Electro-osmosis; Soil freezing; Vacuum consolidation; Case histories Soil confinement

- **1.** Plan the method of soil exploration for a given site and structure.
- 2. Analyzing soil strata below river/sea bed by planning proper field tests.

- **3.** Propose proper treatment method for soft, weak and compressible soil strata.
- **4.** Planning and design of suitable method of dynamic consolidation for a site.
- **5.** Planning and design of suitable techniques of grouting, anchors and vacuum consolidation.

Deep Foundations												
Course Code:	CV2311-1	Course Type	PEC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
Total Teaching Hours	40	CIE + SEE Marks	50+50									
Prerequisite	CV2006-1	•										

# **Course Objectives:**

- To learn more about the introductory aspects of piles, selection of deep foundation systems and associated equipment.
- 2. Design of axial and lateral geotechnical capacity of driven piles in both individually and as group and Learn the usage of wave equation analysis applied to the design and installation of driven piles including driving problem.
- **3.** To carry out the design of pile and to estimate the efficiency of a Pile Group.
- **4.** To understand the structural mechanic aspects of the design in a laterally loaded pile and
- **5.** Study the different types of well foundations and carry out the analysis and design.

#### **UNIT-I**

#### PILE CLASSIFICATION FUNCTION

09 Hours

Classification of piles – Factors governing choice of pile foundation – Load transfer principles – piling equipment and methods – changes in soil condition during installation of piles –Load transfer mechanism, Soil properties for static pile capacity, Ultimate static pile point capacity, Skin resistance, Static load capacity using load transfer, Tension piles, Piles for resisting uplift, Laterally loaded piles, Numerical problems. Pile load test and Penetration tests.

#### SINGLE PILE -DYNAMIC ANALYSIS AND LOAD TESTS

07 Hours

Dynamic analysis, Pile driving, Rational pile formulae, other dynamic pile driving formulae and general considerations, Reliability of dynamic pile driving formulae

#### UNIT-II

# PILE GROUPS – EFFICIENCY OF PILE GROUPS

09 Hours

Pile groups – Efficiency of pile groups – Group capacity in clays – Minimum spacing of piles in a group – Negative skin friction of single piles and pile groups

#### **SETTLEMENT OF PILE GROUPS IN CLAYS**

05 Hours

Equivalent raft approach – Settlement of pile groups in sands, under reamed piles.

#### **UNIT-III**

# **WELL FOUNDATIONS**

05 Hours

Components of a well foundation–Procedure for construction and sinking of wells–Thickness of well steining for sinking under self-weight - Grip length- Problems encountered in well sinking–Tilts and Shifts– Causes – Permissible tilts and shifts - Methods to rectify tilts and shifts – Forces acting on a well foundation –Allowable bearing pressure – Lateral stability of well foundations - Terzaghi's analysis.

#### **DRILLED PIERS & CAISSONS**

**05 Hours** 

Introduction, construction, advantages and disadvantages of drilled piers. Design of open, pneumatic and floating caissons. Advantages and disadvantages of floating caissons.

1.	Understand about the introductory aspects of piles and Selection of deep foundation systems and associated equipment.								
2.	Analyze and design individually loaded piles using static and dynamic formulas.								
3.	Analyze and design pile group and estimate the efficiency of a Pile Group.								
4.	Understand and Estimate the settlement of pile group under loading.								
5.	Analyze and Design the types of well foundations.

ENVIRONMENTAL GEOTECHNIQUES												
Course Code:	CV2312-1	Course Type	PEC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	3:0:0:0 Credits										
Total Teaching Hours	40	CIE + SEE Marks	50+50									
Prerequisite	CV2003-1, C	CV2003-1, CV2006-1										

# **Course Objectives:**

1.	To acquire knowledge about various branches of environmental geotechniques
2.	To familiarize with design of landfill impoundments
3.	To study different waste disposal systems suiting for hazardous and non-hazardous wastes
4.	To familiarize with non-destructive techniques of site characterization.
5.	To study the remediation methods for contaminated soil.

#### **UNIT-I**

#### Soil-water-environment interaction

08 Hours

Introduction to geo environmental Engineering, Soil-water-environment interaction relating to geotechnical problems, Waste:-source, classification and management of waste, Physical, chemical and geotechnical characterization of municipal solid waste, Impact of waste dump and its remediation.

# **Waste Disposal and Introduction to Landfills**

08 Hours

Origin, nature and distribution of soil - Description of individual particle - Soil fabric and Geotechnical application of waste and disposal: Geotechnical use of different types such as Thermal power plant waste, MSW, mine waste, industrial waste. Waste disposal facilities, Parameters controlling the selection of site for sanitary and industrial landfill. Site characterization. MoEF guidelines.

#### **UNIT-II**

#### **Contaminant transport**

08 Hours

Sources, types and composition of different wastes - Characteristics and classification of hazardous wastes - Generation rates - Potential problems in soils due to contaminants. Ground water flow - Sources of ground water contamination - Contaminant transport - Pollution of aquifers by mining and liquid wastes - Ground water pollution downstream of landfills - Transport mechanisms.

# **Waste management**

08 Hours

CPCB rules and regulations on waste handling and management - Criteria for selection of sites for waste disposal - Disposal techniques -Disposal systems for typical wastes.

Ground modification and waste modification techniques in waste management - Ground modification - Mechanical modification, hydraulic modification, chemical modification.

#### **UNIT-III**

# **Engineered Landfills and soil remediation**

**08Hours** 

Liners and covers for waste disposal - rigid and flexible liners - Leachate and gas collection system - Engineered landfills (including basal liner and cover liner systems) – components design criteria. Hydrological design for ground water pollution control.

Soil contamination and remediation technology for both ground and aquifers

contaminations

1.	Understand the fundamentals, and engineering aspects on soil-water environment								
	interaction.								
2.	Explain the Origin, distribution, and applications of solid waste management.								
3.	Classify and characterize the hazardous waste and ground water flow of contaminant in								
	soil.								
4.	Understand CPCB rules and regulations on waste and Examine ground modification								
	techniques in waste management.								
5.	Explain the importance of liners, covers, hydrological designs and remediation's for soil

PAVEMENT DESIGN												
Course Code:	CV2313-1	Course Type	PEC									
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03									
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50									
Prerequisite	CV2108-1											

# **Course Objectives:**

- Get a preliminary knowledge on flexible and rigid pavement design for highways and airport pavements.
   Analyze the stresses and deflections in flexible and rigid pavements.
- 3. Understand the various methods in designing the structure of a flexible pavement.
- **4.** Describe the functions and requirements of various types of joints in CC pavement.
- **5.** Know to design the various component parts of concrete pavement.

#### UNIT-I

# **Introduction to Pavement Design**

06 Hours

Desirable characteristics and requirements of a well-designed Pavement, Difference between highway and air field pavements, Basic concepts and objects of pavement design. Functions of various components and comparison of flexible and rigid pavements, Factors affecting design and performance of pavements.

#### STRESSES AND DEFLECTIONS IN FLEXIBLE PAVEMENTS

10 Hours

Stresses and deflections, Principle-Assumptions-limitations, applications of Boussinesq's single layered theory and Burmister's two layered theories in pavement design and problems. Various factors in traffic design wheel load-Contact pressure-ESWL concept for dual and tandem wheel load assembly (Boyd and Foster method), repeated loads and EWL concept-Problems.

#### **UNIT-II**

#### **FLEXIBLE PAVEMENT DESIGN**

08 Hours

Methods for highways and airport pavement design, Introduction to CBR method-Advantages and limitations, Flexible pavement design as per IRC: 37-2001- design factors and recommendations-design steps and Problems.

McLeod method, Burmister's method and Kansas (triaxial) method- principle, design steps and problems.

#### **STRESSES IN RIGID PAVEMENTS**

07 Hours

Factors to be considered in traffic wheel load during the design life of a CC pavement. Basic principle and concepts in analysis of stresses in rigid pavements. Westergaard's analysis- Assumptions, Modified Westergaard's (IRC) equations- Concept of Wheel load stresses-Warping stresses-Frictional stresses-Combined stresses (Using charts /equations)-Problems.

Design of low volume concrete roads by IRC equations method.

#### **UNIT-III**

#### **RIGID PAVEMENT DESIGN:**

09 Hours

Design of joint spacing as per IRC guidelines.

Design of Dowel bars at load transfer joints, Design of Tie bars at longitudinal joints-design steps and problems as per IRC: 58-2002. Design of CC slab as per IRC:58-2002

1.	<b>Explain</b> the fundamental design factors affecting the performance of flexible and rigid										
	pavements.										
2.	Analyze the stresses and deflections in flexible pavement.										
3.	<b>Design</b> the thickness of the highway and airport pavements by different methods.										
4.	<b>Compute</b> the stresses and deflections in cement concrete pavements.										
5.	<b>Design</b> various components of the rigid pavement as per IRC guidelines.

PAVEMENT MATERIALS AND CONSTRUCTION						
Course Code:	CV2314-1	Course Type	PEC			
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03			
Total Teaching Hours	40	CIE + SEE Marks	50+50			
Prerequisite	CV2109-1	•				

# **Course Objectives:**

Cours	e objectives.
1.	Know the properties, requirements and uses of soil, aggregates, Bitumen and Tar in the
	construction of pavement.
2.	Understand the preparation, requirements and uses of Bituminous emulsions and cutbacks.
3.	Choose suitable aggregate mix and design bituminous mix as per specification.
4.	Know the various equipment used in the construction of pavement and their working
	principle.
<b>5</b> .	Understand the different steps involved in preparing sub-grade and tests used to check its
	quality.
6.	Know the specifications, construction methods and quality control checks used for different
	layers of flexible pavement.
7.	Know the specifications, construction methods and quality control checks used for cement

#### UNIT-I

Describe the necessity and use of different types of joints in cement concrete pavements.

Introduction 06 Hours

Introduction to Pavements, Types, Comparison, Typical cross-sections, functions and requirements. AGGREGATES: Concepts of size and gradation, design gradation. Maximum aggregate size, aggregate blending to meet the specification using method of trials and Rothfutch's method.

#### **BITUMENOUS BINDERS**

8.

concrete pavement.

04 Hours

Origin, preparation, properties and chemical constituents of Bitumen, emulsion, cutback and modified bitumen. Requirements for pavement construction.

# BITUMINOUS MIXES 06 Hours

Mechanical properties, dense and open textured mixes, flexibility and brittleness (excluding Hveemstabilometer & Hubbar – field tests). Bituminous mix design by Marshall method and specification using different criteria- voids in mineral aggregate, voids in total mix, density, flow, stability and voids filled with bitumen.

#### **UNIT-II**

# **EQUIPMENT IN HIGHWAY CONSTRUCTION**

05 Hours

Different types of equipment for excavation, grading and compaction, their working principle, advantages and limitations. Equipment for the construction of bituminous and cement concrete pavement and stabilized soil road.

#### **SUB GRADE and CONCRETE PAVEMENTS**

10 Hours

Earthwork grading, construction of embankments and cuts for roads. Preparation of sub grade, quality control tests.

Specifications of materials and method of construction of cement concrete pavements, Quality control tests.

Different types of joints used and their construction method.

09 Hours

#### **UNIT-III**

# FLEXIBLE PAVEMENTS

Introduction, Interface treatment-Prime coat and tack coat, Penetration macadam. Specifications of materials, construction methods and quality control checks during construction for GSB, WBM, WMM, Dense Bituminous Mixes.

# Course Outcomes: At the end of the course student will be able to

- **1. Explain** the types of pavements, component layers, their functions, their importance, and the various materials used for the construction and to **describe** the properties, requirements, preparation and uses of aggregates, and Bituminous binders in the construction of pavement.
- **2. Select** suitable aggregate mix and to **design** the bituminous mix as per Marshall Method.
- **Select** the suitable equipments for the construction of pavement based on necessity and **describe** their working principle; and **describe** the different steps involved in preparing subgrade and tests used to check its quality.
- **4. Explain** the specifications, construction methods and quality control checks used for cement concrete pavement and to **construct** the different types of joints in the pavements.
- **5. Recite** the specifications, construction methods and quality control checks used for different layers of flexible pavement.

REINFORCED EARTH STRUCTURES					
Course Code:	CV2315-1	Course Type	PEC		
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03		
Total Teaching Hours	40	CIE + SEE Marks	50+50		
Prerequisite	CV2005-1				

# **Course Objectives:**

1.	Know the concepts of reinforced earth structures.						
2.	Know the types, engineering properties of Geo synthetics						
3.	Understand the field requirements of Geo synthetics for using them in Separation, filtration,						
	drainage and containment						
4.	Understand the principles and design of earth embankments.						
5.	Understand the stability analysis of reinforced earth foundations and to know the concepts						
	of Soil nailing system						

#### **UNIT-I**

16 Hours

**REINFORCED EARTH:** Historical background, mechanism of reinforced earth, Effect of reinforcement on soil. Application and advantages of reinforced earth.

**GEOSYNTHETICS:** Types, properties and testing methods.

#### **UNIT-II**

15 Hours

**COMPONENTS**: Soil- properties; Reinforcement, types- geosynthetics and metallic (bars, strips, mats and grids). Facing elements-types and properties.

**FUNCTIONSOF GEOSYNTHETICS**: Separation, reinforcement, filtration, drainage and containment. Two examples of application in the field (case histories) for each function are to be explained.

**REINFORCED EARTH RETAINING WALL**: External and internal stability, Design Methods – Coherent gravity and Tie back wedge, design of typical reinforced earth retaining wall (Tieback wedge method only).

#### **UNIT-III**

09 Hours

**REINFORCED EARTH EMBANKMENT AND FOUNDATION**: Improving the stability of a typical earth embankment slope using geotextiles. Reinforced earth foundation – Modes of failure, improvement of bearing capacity by geotextile inclusion.

**SOIL NAILING SYSTEM**: concept and principles, driven and grouted nail system, advantages and limitations.

- **1. Describe** the mechanism and **list** advantages of reinforced earth.
- **Evaluate** physical, mechanical strength, hydraulic, durability and endurance properties for a given geosynthetics.

3.	<b>Explain</b> the components of reinforced earth, <b>outline</b> the functions of geotextile
	and <b>assess</b> the suitability of geosynthetics in filtration, drainage and
	containment.
4.	<b>Design</b> the reinforced earth retaining wall using Tieback wedge method for
	external and internal stability.
5.	Analyze and check the stability of reinforced earth embankments, earth
	foundations and recommend suitable measure to improve bearing capacity.

# PROFESSIONAL ELECTIVE COURSES (CONSTRUCTION TECHNOLOGY AND MANAGEMENT STREAM)

ADVANCED	CONCRETE	TECHNOLOGY	
Course Code:	CV2221-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50
Prerequisite	CV2103-1	•	·

# **Course Objectives:**

- Understand the importance of microstructure of cement and concrete, types of admixtures and its properties in fresh and hardened state of concrete.
   Know the tests and factors affecting the results of hardened concrete.
   Understand durability requirements.
- Select a suitable type of concrete based on specific application.Know the design concepts cement concrete by BIS method.

#### UNIT-I

16 Hours

**INTRODUCTION:** Importance of Bogue's compounds, Structure of a Hydrated Cement Paste, Volume of hydrated product, porosity of paste and concrete, Transition Zone, transport through cement microstructure. Rheology of concrete.

**TESTS ON HARDENED CONCRETE**: Elastic Modulus, factors affecting strength and elasticity of concrete, Effect of end condition of specimen, capping, H/D ratio, rate of loading, moisture condition, determination of hardened concrete original W/C. NDT test concepts - Rebound hammer, Ultrasonic Pulse Velocity (UPV) methods.

## **UNIT-II**

15 Hours

**DURABILITY OF CONCRETE:** Effect of fire, aggregates, abrasion and cavitation. Autogenious, drying and plastic cracking in concrete.

Corrosion of steel reinforcement, carbonation, chloride ingress, corrosion of prestressing steel. Sulphate attack and delayed ettringite formation, physical salt attack.

#### **SPECIAL CONCRETES:**

Concept, materials, properties and applications of Alkali Activated Binders, Graphic concrete pattern for precast concrete surface, Self-healing concrete, Pollution Eating Concrete, Engineered Cementitios Composites, Bio Receptive Concrete to colonize structural concrete, Living 'concrete' to reduce the environmental impact, High quality Graphene concrete, Cement made with CARROT extract.

#### UNIT-III

09 Hours

**MIX DESIGN** - Factors affecting mix design, Design of High Strength Concrete mixes with/without mineral admixtures using IS 10262-2019 method.

#### **Course Outcomes:** At the end of the course student will be able to

- **1. Explain** the microstructure of HCP, mechanism of Water Reducing Agents, Bingham's parameters, elasticity of concrete, **calculate** the effect of chemical composition changes on Bogue's compounds formation and effect of w/c on Volume and porosity.
- **2. Explain** the effect of admixtures on fresh and hardened concrete properties, **compare** the effects of test conditions on concrete strength.

3.	<b>Explain</b> the durability of concrete and <b>identify</b> the remedial measures for the durability
	related issues.
4.	<b>Explain</b> the concept, materials, properties, applications, manufacturing method and typical

**4. Explain** the concept, materials, properties, applications, manufacturing method and typical mix of special concretes.

**5. Design** High Strength Concrete mix proportioning with/without mineral admixtures, as per IS 10262-2019.

**Course Outcomes Mapping with Program Outcomes & PSO**

- **3.** P.K. Mehta, P J M Monteiro, (2016) "**Concrete microstructure and properties"**, Prentice Hall, New Jersey (Special Student Edition by Indian Concrete Institute, Chennai).

- **1.** IS 10262-2019 "Concrete mix proportioning guidelines".
- 2. N. Krishna Raju, "Concrete Mix Design", Sehgal Publishers, 2016
- **3.** Gambhir M.L, "Concrete Manual", Dhanpat Rai & Sons, New Delhi, 2012

ALTERNATIVE BUILDING MATERIALS AND TECHNOLOGIES													
Course Code:	CV2222-1	Course Type	PEC										
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03										
Total Teaching Hours	40	CIE + SEE Marks	50+50										
Prerequisite	CV2001-1	•											

# **Course Objectives:**

- **1. Learn** the energy consumption in building materials and cost effective technologies in buildings.
- **2. Illustrate** the design concept for green building taking into consideration of local climatic condition and building materials
- **3. Summarize** the alternative building materials in the present context from wastes.
- **4. Summarize** the alternative building technologies which are followed in present construction.
- **5. Outline** alternate roofing systems with respect to local climatic conditions and locally available building material.

#### UNIT-I

16 Hours

**INTRODUCTION** Energy in building materials, Environmental issues concerned to building materials, embodied energy calculations. Green design concepts in buildings and its rating, Rainwater harvesting. Environmental friendly and cost effective building technologies, Cost concepts in buildings, Cost saving techniques in planning, design and construction, Comprehensive understanding, criterion, rating procedure of green building through GRIHA assessment.

#### UNIT-II

14 Hours

**ALTERNATIVE BUILDING MATERIALS** Fiber reinforced concrete - Matrix materials, metal and synthetic fibers, Properties and applications. Ferrocement components, materials and specifications, properties and construction methods. Masonry blocks using industrial wastes, Raw materials, manufacture, properties, advantages and disadvantages of FaL G blocks and Stabilized mudblock.

Building materials from agro and industrial wastes Types of agro wastes, Types of industrial and mining wastes, properties and applications.

#### **UNIT-III**

10 Hours

**ALTERNATIVE BUILDING TECHNOLOGIES** Use of arches in foundation, alternatives for wall construction, composite masonry, confined masonry, cavity walls, rammed earth, applications, Top down construction.

Alternative roofing systems: concepts of filler slabs, composite beam panel roofs. Waffle slab construction. Bridge construction by balanced cantilever, incremental launching methods.

Mivan Construction Techniques, Precast concrete and modular construction methods

**Course Outcomes:** At the end of the course student will be able to

- **1. Solve** the problems related to Energy of building materials and **make use** of cost effective building technologies.
- **2. Make use of** the design concept for green building taking into consideration of local climatic condition and building materials.

3.	Utilize	suitable a	igro ar	nd ir	ndustrial was	ites as a b	uilding materia	ıl.			
4.	Select	suitable	type	of	alternative	building	technologies	used	in	civil	engineering
	constru	iction.									

**Make use of** the alternative economical roofing system by considering local climatic condition.

B	<b>UILDING SER</b>	RVICES	
Course Code:	CV2223-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50
Prerequisite	CV1004-1,	CV2001-1	

# **Course Objectives:**

1.	To gain the knowledge of different building services and their types used in buildings.
2.	To understand the functional requirements of ventilation and principles of illumination of
	buildings.
3.	To outline the classification of air conditioning based on function and season.
4.	To gain knowledge of different thermal properties and insulation materials for buildings.
5.	To explain the fire hazards and general safety requirements for buildings.

#### UNIT-I

16 Hours

**Introduction:** requirements and necessity of services for buildings. Types.

**Ventilation:** Definition, Necessity, Functional Requirements, Types- Natural Ventilation and Artificial Ventilation

**Illumination of buildings-** definition, laws of illumination, principles, artificial lighting, day lighting, flood lighting, Introduction to various types of lamps.

#### UNIT-II

15 Hours

**Air conditioning of buildings-** essentials of air-conditioning systems, classification based on function & season, systems, design- AC load calculations, installation and maintenance cost.

**Thermal comfort in buildings-** factors affecting, heat transfer through buildings, thermal properties of building materials, insulation materials for buildings.

#### **UNIT-III**

09 Hours

**Fire protection:** necessity, fire hazards, characteristics and types of fire-resistant materials, fire load and its calculation, fire resistant construction – walls and columns, floors and roofs, wall openings, escape elements and strong room construction, fire protection equipment. General fire safety requirements.

**Course Outcomes:** At the end of the course student will be able to

1.	<b>Explain</b> the different building services and their types used in buildings.
2.	Summarize the functional requirements of ventilation and principles of illumination of
	buildings.
3.	Classify the air conditioning based on function and season.
4.	<b>Explain</b> thermal properties and insulation materials for buildings.
5.	<b>Explain</b> the fire hazards, <b>assess</b> fire load and <b>summarize</b> the general safety requirements for buildings.

1. IS SP41 and SP32-hand book on functional requirements of buildings

CONSTRUCTION METHODS AND EQUIPMENTS										
Course Code:	CV2224-1	Course Type	PEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite	CV2001-1	•								

# **Course Objectives:**

- Summarize the construction of equipment planning, cost of owning and operating.
   Explain the types and specifications of compacting equipment's.
   Outline the fundamentals and preliminary earth work operations.
   Explain the types, basic parts and operating procedure of earthwork equipment's.
- **5.** Outline the process of foundation grouting.

#### **UNIT-I**

16 Hours

Construction planning, types, importance, lack of planning. Equipment management in projects, classification of equipment's, selection of construction equipment's, cost of owning and operating, economic life of equipment's, cost control of equipment's, depreciation analysis.

**Equipment for Compaction** – Introduction, specification and types of compacting equipment's.

#### **UNIT-II**

14 Hours

**Equipment for Earthwork** - Fundamentals of Earth Work Operations, types of Earth Work, Machines for preliminary work.

Tractors – Basic parts and operation, Scrapers – types, construction, operation and applications, Motor Graders – construction, operation and safety, Dragline – types, basic parts and operation. Clamshells – Classification, Hoe – basic parts, operation and application, Bulldozer – Classification, selection of type of bulldozer and out of bulldozer. Power Shovel – *types, basic parts, operation of shovel, selection of type, size of power shovel and factors affecting the output of power shovel, methods of improving the output of power shovel.* 

#### **UNIT-III**

10 Hours

**Foundation grouting** – materials, purpose, exploring the need, *rate of grouting, equipment's of cement grouting and effectiveness.* 

#### **Course Outcomes:** At the end of the course student will be able to

- **1. Explain** the planning of construction equipment and **solve** for the owning, operating and depreciation cost.
- **2. Summarize** the types and specifications of compacting equipment's.
- **3. Explain** the fundamentals and preliminary earthwork operations.
- **4. Explain** the types, basic parts and operating procedure of earthwork equipment's and **calculate** the output of a power shovel.
- **5. Summarize** the process of foundation grouting.

CONSTRUCTION PLANNING AND CONTROL										
Course Code:	CV2225-1	Course Type	PEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50							
Prerequisite	CV2001-1									

## **Course Objectives:**

	1.	Illustrate concepts related to management, economics and project feasibility conditions.
•	2.	Outline the principles and concepts involved in management.
3	3.	Illustrate the needs of planning and updating project schedule through project
		management tools such as CPM, PERT.
4	4.	Identify suitable database to manage and organize information's in project.
Ţ	5.	Solve problems using optimization techniques.

#### **UNIT-I**

16 Hours

**ENGINEERING ECONOMICS**- Basic Concepts of economic analysis, Micro and Macro analysis, project feasibility, benefit cost ratio, interest formula, present worth, future worth, Annual equivalent, Basis for comparison of alternatives, break even analysis. Introduction to management, organization and administration. Value engineering, time management, labor and Material management

#### **UNIT-II**

14 Hours

**CONSTRUCTION PLANNING -** Introduction, time estimates, planning methods of projects, Bar and Milestone charts, PERT and CPM network analysis, crashing of networks. Project Information and its accuracy, use of Information, organizing information in databases, Relational and conceptual model of databases, Centralized database management Systems, Programs, Information Transfer and Flow. Computerized Organization and use of Information.

#### **UNIT-III**

10 Hours

**OPTIMIZATION TECHNIQUES:** Linear Programming: standard form of linear programming, formulation, solution to LPP by graphical method.

Transportation Problem: Introduction, mathematical formulation, methods for initial basic feasible solution, North West corner method, Vogels Approximation method.

Transportation Problem: least cost method, Row and Column minima method.

## Course Outcomes: At the end of the course student will be able to

1.	Make use of concepts related to management and economics for project feasibility.
2.	<b>Relate</b> effectively the principles and concepts involved in management of civil works.
3.	Utilize project management tools. to develop plan and schedule
4.	<b>Identify</b> and <b>choose</b> database systems to manage and organize systems.
5.	<b>Utilize</b> the linear programming and transportation problems for solutions.

CONSTRUCTION QUALITY MANAGEMENT											
Course Code:	CV2226-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	CV2001-1	•									

# **Course Objectives:**

	1.	Summarize the history and quality elements in engineering management.									
	2.	Explain the Integrated quality management as per International Organisations for									
		Standardization.									
	3.	Utilize the quality control in construction projects.									
	4.	Summarize the process and steps involved in benchmarking process.									
ĺ	5	Outline the quality management system in construction projects									

#### **UNIT-I**

15 Hours

**Quality** –History, definition, inspection, control, assurance, engineering, management, Quality guru's, quality function deployment, *six sigma methodology* – *leadership principles, six sigma team.* **Integrated Quality Management** – quality standards, International Organisations for standardization (ISO), ISO 9000 Quality Management system, ISO Certification, ISO 14000 Environmental Management System, *Occupational Health and safety assessment series.* 

## **UNIT-II**

15 Hours

**QUALITY CONTROL IN CONSTRUCTION PROJECTS** QC in concreting, Brick work, stone masonry, Formwork, Foundations, Piling work, Structural work, Woodwork & Timber, Painting, Electrical system, *Waste recovery and maintenance.* 

**BENCH MARKING:** Sources, Process & Step model for Benchmarking, Types of Benchmarking and Code of Conduct. *Internal & External Benchmarking, Advantages of Benchmarking* 

#### **UNIT-III**

10 Hours

**QUALITY MANAGEMENT SYSTEM IN CONSTRUCTION PROJECTS:** Concept, Approach to Problems, Quality Assurance, Quality Control, *Quality Inspection, Records and Reports, Training*, Total Quality Control, Manual/Check Lists, Guide Lines.

#### Course Outcomes: At the end of the course student will be able to

1.	xplain the history, quality elements and summarize the six-sigma methodology.								
2.	Summarize the Integrated quality management as per International Organisations for								
	Standardization.								
3.	<b>Explain</b> the quality control carried in the construction projects.								
4.	<b>Explain</b> the process and steps involved in benchmarking process.								
5.	<b>Explain</b> the quality management system in construction projects.

BUSINESS MANAGEMENT										
Course Code:	CV2321-1	Course Type	PEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite	CV2352-1									

# **Course Objectives:**

1.	Understand the Nature and Purpose of Business, Financial Markets and Instruments										
2.	. Apprehend Financial Institutions and Investment Banking										
3.	Appreciate the models of micro finance and its operational aspects.										
4.	Comprehend components of microfinance, disaster and insurance fundamentals.										
5.	Know the basics of role and functions of capital markets										

#### **UNIT-I**

16 Hours

# Nature and Purpose of Business

Economic activities – Types; Business - Characteristics and Objectives of Business, Structure of Business, Classification of Business activities, Classification of Industries, Business Environment.

#### Financial Markets and Instruments

Money Market - Capital Market - Primary Market and Secondary Market - derivatives. Market - Debt Market - Corporate Debt and Government Securities - New Financial Instruments.

#### Financial Institutions

Development Financial Institutions – Banking and Non-Banking Institutions – Mutual Fund Organizations – Insurance Companies

#### **Investment Banking**

Financial and economic meaning of Investment – Characteristics and objectives of Investment – Types of Investment – Investment alternatives – Choice and Evaluation

#### UNIT-II

15 Hours

#### Models of Microfinance

Models of Microfinance across the world, Microfinance delivery methodologies, Legal and Regulatory framework, Financial Inclusion, Impact of Microfinance

#### Microfinance: Operational Aspects

Financial products and services, financial accounting and reporting, Revenue models of Microfinance, Risk management.

#### Microfinance and Disaster

Recent developments of Microfinance in India, Microfinance and Disaster, Cases on Women SHGs, Linkage Building and Successful Micro Entrepreneurs

*Fundamentals of Insurance: I*ntroduction to Insurance, Principles of Insurance, Insurance contract and provisions

#### **UNIT-III**

09 Hours

# Role and Functions of Capital Markets, SEBI

Overview of Capital Market; Stock Exchange; Commonly used Terms; Types of Capital Issues; Financial Products/ Instruments including ASBA, QIP; SEBI; Registration of Stock Brokers, Sub-brokers, Share Transfer Agents, etc. QIBs.

## Course Outcomes: At the end of the course student will be able to

1.	<b>Explain</b> the <i>Nature and Purpose of Business and financial Markets and Instruments.</i>										
2.	<b>Describe</b> Financial Institutions and Investment Banking.										
3.	<b>Describe</b> Financial Institutions and Investment Banking.										
4.	Identify models of micro finance and its operational aspects										
5.	Explain role and functions of capital markets

CONSTRUCTION ECONOMICS AND FINANCE												
Course Code:	CV2322-1	Course Type	PEC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
Total Teaching Hours	40	CIE + SEE Marks	50+50									
Prerequisite	CV2352-1											

# **Course Objectives:**

1	L.	Define the importance of engineering economics									
2	2.	Summarize the scope of engineering economics and elements of cost in economy									
3	3. Outline the role of civil engineering in construction economics and its effects on workers.										
4	l.	Summarize the capital structure in financial management									
5	j	Explain the fund flow and cash flow statements to implement in construction accounting.									

## UNIT-I

16 Hours

**INTRODUCTION TO ECONOMICS** - Flow in an economy, Law of supply and demand, Concept of Engineering Economics – Engineering efficiency, Economic efficiency

Scope of engineering economics – Element of costs, Marginal cost, Marginal Revenue, Sunk cost, Opportunity cost, Break-even analysis.

#### **UNIT-II**

15 Hours

**CONSTRUCTION ECONOMICS** - Role of Civil Engineering in Industrial Development, Construction development in Housing, transport and other infrastructures, Economics of ecology, environment, energy resources. Construction workers - Urban Problems, Poverty, Unemployment Effects on economics due to migration of construction workers to urban area

**Capital Structure** - The need for financial management, Types of financing - short term borrowing, long term borrowing, leasing.

## **UNIT-III**

09 Hours

**FINANCIAL ANALYSIS** - Fund Flow and Cash Flow statements (Simple Problems), Financial Analysis – Meaning and Types, Tools and Techniques, Ratio Analysis, Types of Ratios, Profitability Ratio, Turnover ratio, Financial ratio (Balance sheet ratios) (Simple problems), Liquidity and Profitability.

Course Outcomes: At the end of the course student will be able to

1.	Outline the importance of engineering economics.										
2.	<b>Explain</b> the scope of engineering economics and <b>outline</b> the elements of cost.										
3. <b>Explain</b> the role of civil engineering in construction economics and <b>identify</b> its efficient construction workers.											
4.	<b>Explain</b> the capital structure in financial management.										
5.	Prepare fund flow and cash flow statements and utilize in construction accounting.

CONSTRUCTION SAFETY MANAGEMENT												
Course Code:	CV2323-1	Course Type	PEC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
Total Teaching Hours	40	CIE + SEE Marks	50+50									
Prerequisite	CV2352-1	CV2352-1										

# **Course Objectives:**

1	•	Outline the salient feature of safety programs for construction.										
2		Summarize the Indian standards for safety in construction.										
3	•	Summarize the construction accidents and safety measures.										
4	·	Explain the behaviour of fuels during fire accidents.										
5	•	Outline the importance of housekeeping and explain the common hazards.										

#### **UNIT-I**

#### 16 Hours

**Safety Management** - Introduction, salient features of safety programs, general safety programs for construction. Safe working environment, Safety clauses in contract documents, Safety programme, Safety policy, Safety department, *safety officers, safety records, safety training*. Safety lacunae in Indian Construction Industry

**SAFETY STANDARDS** - Indian standards for safety in construction, *BIS standards*, American National Standards.

## **UNIT-II**

#### 14 Hours

**CONSTRUCTION ACCIDENTS AND SAFETY** - Accident- Causes, Effects and Safety measures, Legal requirements, Responsibility of the employers. Reporting occurrence of accidents, Reporting occurrence of hazards, *Action to be taken by the Site-in-charge in case of accidents*.

**FIRE PREVENTION AND CONTROL** - Understanding fire chemistry, Behaviour of fuels in fire, *Fire causes, Types of extinguishers and use,* Fire prevention planning, Check list for fire prevention. Emergency Escape Means of Escape, Evacuation, Occupant firefighting.

#### **UNIT-III**

#### 10 Hours

**COMMON HAZARDS** - Dust, Impregnated timber, Lead poisoning, Toxic fumes, Noise, *Code of practice for reducing noise, Vibration, Power supply*, Lighting, Maintenance, House-keeping, Materials, Movement, Drowning, Openings, Weight.

Course Outcomes: At the end of the course student will be able to

Explain the salient features of safety programs in construction.
 Summarize the Indian standards for safety in construction.
 Outline the construction accidents and its safety measures.
 Explain the behaviour of fuels and fire chemistry during fire accidents.
 Outline the importance of housekeeping and explain the common hazards.

DESIGN OF SPECIAL CONCRETES												
Course Code:	CV2324-1	Course Type	PEC									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03									
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50									
Prerequisite	CV2105-1											

# **Course Objectives:**

- **1.** Learn to differentiate and apply the principles of special concretes mix designs.
- **2.** Understand the materials, properties, applications, factors influencing the manufacturing of special concretes.

#### **UNIT-I**

16 Hours

#### SUSTAINABLE CONCRETE MIX DESIGN

Properties and factors to be considered for the use of industrial wastes, recycled wastes as aggregates in concrete, Design of Standard Grade Concrete with/without recycled and industrial waste aggregates, **Fiber Reinforced Concrete** – Properties, Applications, Factors influencing the mix design, Design of mixes.

#### UNIT-II

14 Hours

**LIGHT AND HEAVY WEIGHT CONCRETE:** Material, Properties, Applications, Factors affecting the mix design, Design of Mix Proportioning, Manufacturing Methods.

#### **UNIT-III**

10 Hours

MASS CONCRETE AND HIGH VOLUME FLYASH (HVFA) CONCRETE: Factors affecting the mix design, Mix proportioning

#### Course Outcomes: At the end of the course student will be able to

- **1. Identify** the Properties, factors influencing for the use of recycled, industrial waste aggregates in concrete and explain the properties, applications and factors influencing high strength and fiber reinforced concrete mixes.
- **2. Design** Standard, High Strength and Fiber Reinforced Concrete Mixes.
- **3. Identify** material, properties, applications, and explain the factors affecting the mix design, Manufacturing Methods of Light weight and high density concrete mixes.
- **4. Design** Light weight and High Density Concrete mixes.
- **5. Design** Mix Proportioning of Mass Concrete and High Volume Fly Ash Concrete.

DISASTER MAN	AGEMENT A	AND MITIGATION	
Course Code:	CV2325-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50
Prerequisite		•	

## **Course Objectives:**

- Describe the basic types of hazards and their potential consequences to India
   Understand the planning and assessment of Hazard, Risk, Vulnerability and disaster
   Describe the basic concepts of the emergency management cycle (mitigation, preparedness, response, and recovery)
   Critically understand the various disaster management acts and policies and approaches in both national and state level scenario.
- **5.** To build skills to respond to disasters in an effective, humane and sustainable manner

#### **UNIT-I**

16 Hours

Hazard, Risk, Vulnerability, Disaster and Disaster Management. Types of Disasters: Hazard and vulnerability profile of India.

Relevance of Disaster Risk, Vulnerability & Capacity Assessment in Planning, Concepts of Hazard Assessment, Vulnerability Assessment, Risk Assessment and Capacity Assessment, Hazard Identification and analysis.

#### UNIT-II

15 Hours

Four elements of comprehensive disaster management (Preparedness, Response, Recovery and Mitigation), Concept of Mitigation and its importance (Structural and Non Structural mitigation measures, identification of mitigation measures relating to different types of hazards and implementing strategies). Land use Management tools for disaster risk reduction. (building codes, GDCR, zoning ordinances, land acquisition, transfer of development rights, Recovery and reconstruction plan).

National Disaster Management Act, Various State Disaster Management Acts (Gujarat, Uttar Pradesh, Uttaranchal, Bihar, Karnataka) and State disaster management policies (e.g. Orissa, Gujarat, Uttaranchal, Karnataka, Tamil Nadu, Delhi, Uttar Pradesh). Relevance of Rehabilitation and Resettlement Policy in Recovery and reconstruction phase of disaster management. Coastal zoning regulation for construction and reconstruction phase in the coastal areas.

#### **UNIT-III**

09 Hours

Role of Government/Civil Society/International Organizations/Communities and Approaches to Community Based Disaster Risk Management and Planning. (Local coping mechanisms, Importance of Mock Drills and On site volunteer management in Community level disaster preparedness activities).

Projects implemented general description of projects carried out in India following natural disasters. Disaster resistant buildings & measures. Recent developments. Case studies

# Course Outcomes: At the end of the course student will be able to

- Develop an understanding of the key concepts, definitions a key perspectives of All Hazards, Disasters, Risk and Vulnerability
- 2. Develop a deep understanding of disaster resilience, risk mitigation, and recovery policies as they arise from natural hazards around the globe
- **3.** Develop a basic under understanding of Prevention, Mitigation, Preparedness, Response and Recovery
- 4. Understand the various acts and policies related to Indian disaster management
- **5.** Explain the role of public and private partnerships

SUSTAINABLE CONSTRUCTION MATERIALS AND METHODS							
Course Code:	CV2326-1	Course Type	PEC				
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03				
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50				
Prerequisite	CV2001-1	·	·				

# **Course Objectives:**

- **1.** Understand the 'modern' building materials developed using advanced technologies and testing methods.
- **2.** Apprehend the application of recycled/reconstructed building materials in the construction of green buildings.
- **3.** Know the different precast construction methods used at construction site.
- **4.** Appreciate the cutting edge technologies, methods and strategies of project management for sustainable construction.
- **5.** Comprehend components of embodied energy in building and understand the Rating Systems, its contribution to sustainability based on GRIHA and LEED Rating systems.

#### **UNIT-I**

16 Hours

**Modern Building Materials**: Properties and applications –Self-healing concrete3D graphene, Self-healing concrete, Aerographite, Laminated timber, Modular bamboo, Transparent aluminium, Translucent wood, Light-generating concrete, Microbial cellulose, Spider silk, Aluminium foam, Nanocrystal, Wool brick, Pollution-absorbing brick, Hydroceramics, Biochar, Bioreactors, Invisible solar cells

**Modern Construction Formworks**: Aluminium formwork, Precast system, Modular formwork, Tunnel formwork, Fiberglass shuttering.

#### **UNIT-II**

15 Hours

**Modern Building Construction Techniques**: 3D Volumetric Construction, Precast Flat Panel Modules, Pre-cast Foundation Technique, Hybrid Concrete Building Technique, Thin Joint Masonry Technique, Insulating Concrete Formwork (ICF) Technique

**Sustainable Construction and Management**: Identification of cutting edge sustainable construction materials, technologies. Project management strategies for use in the construction industry and evaluation of their potential to reduce the negative environmental impacts of construction activity.

#### **UNIT-III**

09 Hours

**Components of Embodied Energy:** energy for production, transportation and erection, Estimation methodology, Computation of embodied energy for building.

**Green Buildings Rating**: Concepts Features of TERI GRIHA rating. LEED rating with respect to building envelope, Economics of sustainability and benefits

**Course Outcomes:** At the end of the course student will be able to

**1. Explain** the properties and applications of modern building materials.

- **2. Describe** the choice, properties and various applications of modern construction formworks.
- **3. Describe** advanced construction techniques.
- **4. Identify** the cutting edge technologies, methods, strategies of project management
- **5. Explain, compute the components of embodied energy** and **evaluate** a building based on GRIHA and LEED rating systems

VALUATIO	ON OF REAL	PROPERTIES	
Course Code:	CV2327-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50
Prerequisite	CV2001-1	•	

# **Course Objectives:**

1.	Classify properties and understand forms of value.
2.	Determine depreciation using suitable methods.
3.	Apply techniques of valuation of land.
4.	Understand forms of rent and determine standard rent.
5.	Adopt suitable techniques of valuation of lands with buildings.

## **UNIT-I**

16 Hours

Cost, Price and Value, Nature and essential characteristics of value. Forms of value. Valuation and its purpose. Classification of property- Freehold and leasehold. Sinking Fund. Amortization. Depreciation and Obsolescence. Methods of depreciation - Straight Line Method, Constant Percentage Method, Sum of years digit method, Sinking Fund Method and Declining Balance Method.

Qualities of a valuer, Principal types of lease- Building lease, Occupation lease, Sublease, Life lease, Perpetual lease.

#### **UNIT-II**

14 Hours

Valuation of Land - Valuation methods: Comparative Method, Abstractive Method, Belting Method, Development Method, Flat Rate Technique and Hypothetical Building Scheme (or Land residual Method.) Rent and forms of rent - Outgoings, Gross income and net income, Year's purchase, rate of interest, Standard rent and its computation, Tenancy Laws on rent.

Factors affecting the value of Land, Regular Shaped Plots, Land Locked Land, Recess Land, Strips of Land, Estimating the future life of buildings.

#### **UNIT-III**

**10 Hours** 

Valuation of Land with Buildings: Direct Comparison, Land and building method, Rental Method, Profit Method, Development Method, - Valuation for Capital Gains, -, Valuation for Land Acquisition. The Real Estate (Regulation and Development) Act 2016, Insolvency and Bankruptcy Code.

## **Course Outcomes:** At the end of the course student will be able to

1.	<b>Identify</b> forms of value and classify property.
2.	<b>Determine</b> depreciation rates for properties.
3.	Make use of suitable method to valuate a land.
4.	<b>Determine</b> standard rent of a property.
5.	Valuate a property with land and building and make use of RERA to appropriate
	condition.

ADVANCED HYDRAULICS							
Course Code:	CV2231-1	Course Type	PEC				
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03				
Total Teaching Hours	40	CIE + SEE Marks	50+50				
Prerequisite	CV2002-1	•					

# **Course Objectives:**

1.	Illustrate Chezy's and Manning's formulae and determine most economical channel section
2.	<b>Explain</b> specific energy and <b>compute</b> critical flow in prismatic channels
3.	Derive dynamic equations of gradually varied flow and compute draw down and back water
	curves
4.	Make use of hydraulic jump as energy dissipator
5	Explain nine network analysis and analyse pressure distribution system

#### **UNIT-I**

#### **Open Channel Flow:**

16 Hours

Kinds of open channel flow, channel geometry, types and regimes of flow Velocity distribution in open channel, Uniform Flow – features of uniform flow, Manning's and Chezy's formula- rigid and mobile boundary channels, determination of roughness coefficients

Determination of normal depth and velocity, most economical sections, non-erodible channels, Flow in a channel section with composite roughness, flow in close conduit with open channel flow, wide open channel, specific energy, critical flow and its computation in prismatic channels.

#### UNIT-II

## **Varied Flow; Hydraulic Jumps**

15 Hours

Dynamic equations of gradually varied flow, assumptions and characteristics of flow profiles, classification of flow profile, draw down and back water curves(M1 and M2 type) profile determination, graphical integration, direct step and standard step method, numerical methods.

**Hydraulic Jumps:** momentum in open channel flow, specific force, derivation of conjugate depths, types, basic characteristics, length and location, jump as energy dissipation, control of jump, surges.

#### **UNIT-III**

PIPE NETWORK: 9 Hours

Water distribution, network analysis, analysis of pressure distribution system- equivalent pipe and Hardy cross method, software application.

#### **Course Outcomes:** At the end of the course student will be able to

- 1. **Determine** most economical channel sections for rigid and mobile boundary channels applying Chezy's and Manning's formulae
- **2. Explain** and **compute** specific energy and critical flow prismatic channels
- 3. Develop dynamic equations of gradually varied flow, **classify** the flow profiles and **compute** length of draw down and back water curves
- **4. Develop** conjugate depth relationship and **make use of** hydraulic jump as energy dissipator
- **5. Analyse** pressure distribution system in pipe network

ENVIRONMENTAL IMPACT	ASSESSMEN	IT FOR CIVIL ENGINEE	RING
Course Code:	CV2232-1	Course Type:	PEC
Teaching Hours/Week (L: T: P: S):	3	Credits:	03
Total Teaching Hours:	40	CIE + SEE Marks:	50+50

# CV2003-1

## **Teaching Department: Civil Engineering**

Course Objectives: This Course will enable students to

- Identify the need to assess and evaluate the impact of projects on environment
   Explain major principles of environmental impact assessment.
   Understand the different steps within environmental impact assessment
- **4.** Appreciate the importance of EIA for sustainable development and a healthy environment.

#### UNIT-I

16 Hours

**Evolution of EIA**: Concepts of EIA, EIA methodologies (Adhoc, Network Analysis, Checklists, Map overlays, Matrix method), Screening and scoping, Rapid EIA and Comprehensive EIA, General Framework for Environmental Impact Assessment.

## **UNIT-II**

14 Hours

**Baseline data study:** Prediction, and assessment of impacts on physical, biological, and socio-economic environment, Legislative and environmental clearance procedures in India, Public participation, Resettlement, and rehabilitation, Fault tree analysis, Consequence Analysis

#### **UNIT-III**

10 Hours

**Introduction to Environmental Management Systems:** Environmental management plan-Post project monitoring, Environmental Audit: Cost Benefit Analysis, Life cycle Assessment. Case studies on project, regional and sectoral EIA

Course Outcomes: At the end of the course student will be able to

- 1. Understand phenomena of impacts and know the impact quantification of various projects in the environment
- **2.** Liaise with and list the importance of stakeholders in the EIA process.
- **3.** Know the role of public in EIA studies
- **4.** Overview and assess risks posing threats to the environment.
- **5.** Assess different case studies/examples of EIA in practice.

GROUND WATER HYDROLOGY AND EXPLORATION									
Course Code:	CV2233-1	Course Type	PEC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
Total Teaching Hours	40	CIE + SEE Marks	50+50						
Prerequisite	CV2002-1, CV2336-1								

# **Course Objectives:**

- **1. Develop** an understanding on the fundamentals of groundwater hydrology, **appraise** it Significance and **Inspect** the techniques of groundwater exploration, development and management.
- **2. Explain** the occurrence and distribution of subsurface water, **list** and **distinguish** the types of aquifers, wells and their characteristic properties.
- **Explain** aquifer parameters, **analyze** pump test and Darcy' Law governing the steady unidirectional groundwater flow
- **4. Explain** Well hydraulics and **estimate** the aquifer parameters in steady and unsteady state radial flow into unconfined and confined aquifers.

#### **UNIT-I**

## **FUNDAMENTALS OF GROUND WATER FLOW AND HYDROLOGY:**

16 Hours

**INTRODUCTION**: Vertical distribution of subsurface water and its occurrence. Aquifer and its types, water bearing properties of rocks and their classification.

**FUNDAMENTALS OF GROUND WATER FLOW**: Aquifer parameters- porosity, permeability, Specific yield, specific retention, hydraulic conductivity, storage coefficient, transmissibility, Pump tests, recuperation tests, interference of wells; Darcy's law, steady unidirectional flow in confined and unconfined aquifers

#### **UNIT-II**

#### **WELL HYDRAULLCS:**

16 Hours

**Steady state Radial flow** in confined and unconfined aquifer, Thiem's equilibrium formulae; Estimation of Discharge and Transmissivity.

**Unsteady state Radial flow**: Aquifer parameters, General equation derivation- Theis's method, Cooper-Jacob method, Chow's method, solution of unsteady flow equations.

#### **UNIT-III**

# **GROUNDWATER EXPLORATION, DEVELOPMENT AND MANAGEMENT:**

08 Hours

Remote sensing and Geophysical methods, Electrical Resistivity methods, types of wells and yield of a well. Methods of construction, tube well design, dug wells, well development, pumps for lifting water - working principles, power requirement. Resource Management, Conjunctive use - necessity, techniques and economics.

## Course Outcomes: At the end of the course student will be able to

- 1. Illustrate the vertical distribution and occurrence of subsurface water, List and distinguish the water bearing properties of the rocks, the types of aquifers and their characteristic properties
- 2. List and Explain aquifer parameters, analyze pump test and Darcy' Law in steady state

	unidirectional groundwater flow.
3.	<b>Explain</b> equilibrium Well hydraulics and <b>estimate</b> the aquifer parameters in steady state
	radial flow in the unconfined and confined aquifers
4.	<b>Explain</b> in-equilibrium Well hydraulics and <b>estimate</b> the aquifer parameters in unsteady state
	radial flow in the unconfined and confined aquifers using appropriate methods.
5.	List and categorize types of wells, Inspect and explain advanced techniques of groundwater
	exploration, development and management using remote sensing, geophysics and GIS.

RS & GIS APPLICATIONS IN WATER RESOURCES ENGINEERING									
Course Code:	CV2234-1	Course Type	PEC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50						
Prerequisite	CV2004-1, CV2336-1								

# **Course Objectives:**

- **1. Explain** the basic principles of Geoinformatics comprising Remote sensing, Photogrammetry, GPS, GNSS& GIS
- **Explain** the stages and techniques of photogrammetry, aerial photo interpretation, visual & digital image processing, enhancement and interpretation.
- **3. Explain** and **Appraise** GIS its components, data structures, process and operation, Map and its projections, components, preparation and overlays
- **4. List, Explain** and **appraise** the significance of GEOMATICS in various Water Resource Engineering practices

## **UNIT-I**

16 Hours

**Remote sensing and its principles:** Physics of Remote sensing, EM spectrum, Blackbody concept, atmospheric windows, spectral response of common earth features.

**Platforms & Sensors:** Ground based, Air borne and Space borne platforms, Active and Passive Sensors, Photographic sensors, scanners, radiometers, RADAR and thermal infrared, hyper spectral remote sensing, Indian satellites and sensors: capabilities, data products

**Photogrammetry**: Basic principles of Aerial photography and Photogrammetry, Flight procedures, Aerial Photo Interpretation and Analysis techniques.

**Satellite Image Interpretation and Analysis techniques:** Visual & Digital Image interpretation, Interpretation elements, False Colour Composites (FCC).

#### UNIT-II

15 Hours

**Digital Image Processing, Analysis and GIS**: Digital image formats, pre-processing and processing (DIP), image restoration/enhancement procedures, information extraction, pattern recognition concepts, post processing procedures.

**Geographic Information System -concept and spatial models**: Fundamentals of GIS, spatial and non-spatial data, Vector and Raster GIS, GIS Hardware and software, GPS & GNSS, georeferencing, digitization, Thematic Maps, Overlay Analysis, Operation of GIS, Co-ordinate systems and map projections, Map scale, data display and cartography.

#### **UNIT-III**

09 Hours

**RS & GIS Applications in Civil Engineering:** Watershed characteristics, Soil moisture analysis, Water quality assessment and monitoring, flood mapping and monitoring, Village resource mapping, Smart City Development, Groundwater inventory, coastal environmental studies

Course Outcomes: At the end of the course student will be able to

**1. Define** and **Explain** the principles of Remote Sensing, and **list** various types of platforms, sensors & resolutions in RS with a special reference to Indian satellites and data products.

2.	<b>Explain</b> Photogrammetry, its basic principles, elements of photo interpretation and Visual&
	Digital Image interpretation techniques.
2	Explain different stages involved in Digital Image Processing, various image enhancement

**3. Explain** different stages involved in Digital Image Processing, various image enhancement techniques, **list** and **Classify** the digital image formats and the extracted information for various purposes.

**4. Explain** and **Appraise** GPS, GNSS & GIS - their components, data structures, process and operation, Map and its projections, components, preparation and Overlays.

**List** the applications and **explain** the significance of geospatial technology or GEOMATICS (Photogrammetry, RS, GPS, GNSS & GIS) in various fields of Water Resource Engineering practices.

RURAL WATER SUPPLY AND SANITATION										
Course Code:	CV2235-1	Course Type	PEC							
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite	CV2003-1	·	·							

# **Course Objectives:**

- 1. Understand importance of water, drinking water standards, water treatment methods and different types of rural water supply systems.
- **2.** Learn different rural sanitation methods and its importance, rain water harvesting and its uses
- **3.** Create awareness on communicable diseases and its control measures.
- 4. Understand different methods of Refuse collection methods and its disposal.
- **5.** Provide the knowledge on Milk sanitation, quality control of milk.

#### **UNIT-I**

16 Hours

**Rural water supply** - Introduction: Need for a protected water supply, investigation and selection of water sources, various techniques for rural water supply, protection of well waters, drinking water quality standards water treatment methods – disinfection, deflouridation, hardness and iron removal, ground water contamination and control

**Rural sanitation**-Conservancy, public latrine, concept of Eco-sanitation, trenching and composting methods, Two pit latrines, aqua privy, W.C, septic tank, soak pit. Drainage Systems: Storm water and sullage disposal, rain water harvesting and uses.

### UNIT-II

16 Hours

**Communicable diseases-** Terminology, water borne diseases, classifications, methods of communication, general methods of control. Disease vectors: House fly and mosquito – life cycle, diseases, transmission and control measures.

**Refuse collection and disposal-**Garbage, ash, rubbish, collection methods, transportation, disposal-salvaging, dumping, controlled tipping, incineration, composting, dung disposal-digester, biogas plant

#### **UNIT-III**

08 Hours

**Milk sanitation**- Essentials, test for milk quality, pasteurization, quality control, cattle borne diseases, planning for a cow shed.

- 1. Identify problems in rural water supply and monitor, quality and maintenance of rural water supply, design low cost water treatment system for rural areas.
- **2.** Explain rural sanitation, management of grey, storm water and recognize types of waste water treatment systems.
- **3.** Outline the safe disposal methods of solid wastes.
- **4.** Illustrate types of diseases and preventive measures.
- **5.** Ensure quality of milk and preventive measures for cattle borne diseases.

ENGINEERING GEOLOGY										
Course Code:	CV2236-1	Course Type	PEC							
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite			·							

# **Course Objectives:**

- **1.** To equip the students to identify the significance of Geology in Civil Engineering practices
- 2. To make them understand the earth, its structure, materials, resources, processes and forces acting on it in order to appreciate the geological problems and its solutions comes under Civil Engineering practices

#### **UNIT-I**

15 Hours

**Physical Geology:** Geology and its importance in Civil Engineering practices; Parts of the Earth-Internal Structure and its Composition; Earthquakes- Causes and effects, Seismographs, concept of plate tectonics, seismic resistant structures and engineering considerations; Rivers- Drainage pattern, drainage basin, concept of water shed, geological work of rivers, major erosional and depositional land forms, engineering significance; Weathering- agents, types and engineering significance, influence of climate and lithology on weathering; Soil- Soil Profile, Geological classification, soil erosion and its control.

**Materials of the Earth**: Minerals and Rocks, rock forming minerals and economic minerals; physical properties of Minerals; classification, chemical composition, general characteristics, properties and uses of common rock forming minerals- Quartz group, Feldspars, Pyroxenes, Amphiboles, Micas, Carbonates, Olivine, Asbestose, Garnet, Talc, Gypsum, magnetite and Kaolinite; economic minerals and their uses. Rocks- definition, threefold division of rocks, Rock cycle, distinguishing features of igneous, sedimentary and metamorphic rocks; Characteristics and identification factors of rockstextures and structures.

### **UNIT-II**

16 Hours

**Petrology:** Igneous rocks– forms, textures and structures, classification, Tabular classification; varieties- Granite, Gabbro, Dunite, Dolerite, Pegmatite and Basalt, their engineering properties and uses. Sedimentary rocks – classification, textures and structures, varieties- Sandstone, Limestone, Shale, Breccia, Conglomerate and Laterite, their engineering importance and uses. Metamorphic Rocks- Metamorphism, process, agents, types, textures and structures; varieties- Gneiss, Quartzite, Marble, Slate, Phyllite, Schists, their engineering importance and uses. Qualities of good Building stones, Road Metals, Railway Ballasts and Concrete aggregates. Rocks as building materials for foundation, decorative stones, flooring and roofing with examples.

**Structural Geology:** definition, forces, stress, strain; Attitude of beds, Clinometer compass, outcrops, escarpments, outlier and inlier. Folds, Faults, Joints and Unconformities- definition, causes, parts, classification, recognition and engineering importance.

#### **UNIT-III**

09 Hours

**Engineering Geology**: Ground water- source, occurrence, zones, aquifers- types and properties; Ground water investigation- Selection of Well sites, geological, hydrological and geophysical methods (electrical resistivity method); Engineering Geology in Dams and Reservoirs, silting up of reservoirs and its control; Engineering geology in tunnelling practice. Mass movements- causes, classification and control.

### **Course Outcomes:** At the end of the course student will be able to

1.	Identify the significance of Geology in Civil Engineering practices									
2.	Understand the earth, its structure, materials, resources, processes and forces acting on it									
	in order to appreciate the geological problems and its solutions comes under Civil									
	Engineering practices									
3.	Identify the building stones used in Civil Engineering practices									
4.	Understand the structural geology									
5.	Identify and appraise ground water, water quality, tunneling and mass movements.

ADVANCED APPLIED ENGINEERING GEOLOGY									
Course Code:	CV2331-1	Course Type	PEC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50						
Prerequisite	CV2236-1, CV2336-1								

# **Course Objectives:**

- **1. Develop** an understanding and **appraise** the significance of Earth Sciences in Civil Engineering practices.
- **2. Identify** and **differentiate** the suitable Materials of construction **evaluating** its Engineering properties
- **3. Appraise** and **appreciate** the advanced applications of Earth Sciences in the field of resource exploration, natural calamities, health and environmental management.
- **4. Identify, Appreciate, Analyze, Interpret, Evaluate** and **Solve** the geological problems coming under Civil Engineering practices

UNIT-I 14 Hours

**Geology and Engineering**: Earth Science and its disciplines in Engineering practices, Geological Engineering, significance of geology in the Civil Engineering projects, Maps and Map Reading **Earth Resources and Applied Geology:** Geology of dams, reservoirs, tunnels, highways and bridge site engineering. Engineering Properties of Rocks: Crushing strength, Transverse strength, porosity, density, abrasive resistance, frost and fire resistance, Qualities of good Building stones, Road Metals, Railway Ballasts & Concrete aggregates. Rocks as M.O.C. – foundation, decorative stones, flooring & roofing with examples.

UNIT-II 16 Hours

**Geohydrology and Watershed Management:** Concept of watershed and its development, rainwater harvesting & artificial recharging, water quality and water pollution.

**Environmental Geology & Medical Geology:** Earth and Health, Impact of Geology on environmental health hazards, Environmental Geology of landslides, mining, developmental projects, etc., its applications in Engineering disciplines and civil engineering projects viz: tunneling, dams and reservoirs, etc., Impact of Weathering and Erosion in the Civil Engineering projects and structures

UNIT-III 10 Hours

**Exploration Geology and Geophysics:** for foundation and groundwater; geological, geophysical and hydrological investigations, electrical resistivity and seismic methods, Remote Sensing, GIS, GNSS and their application in the field of exploration and civil engineering.

- **1. Identify, Explain** and **Appraise** the significance of Earth Sciences in Civil Engineering practices.
- 2. **Identify** and **differentiate** the suitable materials of construction **evaluating** its Engineering properties
- **3. Identify** and **appraise** artificial recharging, water quality, watershed development and management.

- **4. Appraise and Appreciate** the advanced applications of Earth Sciences in the field of resource exploration, natural calamities, health and environmental management.
- 5. **Identify, Appreciate and Evaluate** the engineering geological problems coming under Civil Engineering practices and **examine** the **solutions** for them

GEOINFORMATICS IN ENVIRONMENTAL ENGINEERING										
Course Code:	CV2332-1	Course Type	PEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50							
Prerequisite	CV2003-1	•								

# **Course Objectives:**

1.	Explain the fundamentals of geoinformatics									
2.	<b>Explain</b> platforms, visual & digital image processing, enhancement and interpretation.									
3.	<b>Explain</b> and <b>Appraise</b> GIS - its components, data structures, process and operation, Map and									
	its projections, components, and its applications.									
4.	<b>Explain</b> and <b>Remote sensing</b> , data sets, process and operation, and its applications.									
5.	<b>Explain</b> the RS & GIS applications in environmental engineering									

#### **UNIT-I**

16 Hours

**Fundamentals of Remote Sensing:** Definition, Physics of remote Sensing, EM Radiation and its interactions with atmosphere, Spectral reflectance of earth features, Resolution: Spatial, Spectral, Temporal and Radiometric.

**Platforms, Sensors and Image Processing:** Platforms, Active and Passive sensors, various satellites in orbit and their sensors, Data products, Image Processing- Visual and digital image, Interpretation, Ground truth verification, Image analysis, Image enhancement, Rectification, Classification: types, accuracy assessment.

#### **UNIT-II**

15 Hours

**Introduction to GIS**: GIS Components- Hardware, Software, Dataware, User. Data input, manipulation and outputs, data analysis, overlay analysis, buffer analysis, interpolation and extrapolation.

**Application of Remote Sensing and GIS**: Applications of remotely sensed data for identifying solid waste disposal, forest fire mapping, EIA studies, Optimal routing of solid waste using GIS – Case study, Environmental siting of industries.

#### **UNIT-III**

09 Hours

Re-modeling of water distribution system using GIS.

Environmental degradation assessment using geoinformatics.

- **1. Explain** the principles of remote sensing, and **list** types of platforms, sensors and resolutions in RS with a special reference to Indian satellite data products.
- **2. Explain** platforms and sensors and **discuss** digital image processing and enhancement techniques.
- **3. Explain** GIS components, data structures, process, operation, output and **discuss** their applications.
- **4. Evaluate** the applications of Geoinformatics in environmental engineering.

**5. Remodel** the case studies related to water distribution system and **assess** the environmental degradation using Geoinformatics.

GROUNDWATER RECHARGE AND CONSERVATION							
Course Code:	CV2333-1	Course Type	PEC				
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03				
Total Teaching Hours	40	CIE + SEE Marks	50+50				
Prerequisite	CV2336-1	•					

# **Course Objectives:**

- **1. Develop** an understanding of the basics of groundwater geology, the concepts of rainwate harvesting, water conservation and groundwater recharging with their significance and help them to **Identify** and **explain** the proper water management techniques
- **2. List, categorize** and **explain** aquifer parameters, types of wells, well inventories, **Inspect** the significance of water quality and geology in groundwater recharging.
- **3. List, appraise** and **explain** various traditional and artificial water harvesting & groundwater recharging techniques, **examine** site specific selection procedures, their benefits and problems,
- **4. Examine** different water conservation & water quality management techniques, **assess** their suitability and cost effectiveness.
- **5. Identify, appraise** and **explain** the application of Geoinformatics in water harvesting, conservation, artificial recharging and management of water resources

# **UNIT-I**

15 Hours

INTRODUCTION: Water for life, rainwater harvesting and groundwater recharge: concepts, basics of groundwater geology and water conservation techniques, importance.

WELLS AND WELL INVENTORIES: Definition, types, aquifer parameters, well inventories, ground water quality, groundwater pollution, significance of geology in recharging.

#### UNIT-II

17 Hours

GROUNDWATER RECHARGING: Objectives, recharge, water balance, traditional, artificial, induced methods, hydro fracturing, roof top harvesting, site selection for groundwater recharging, quality of recharging water, coastal aquifers and recharging, benefits and problems.

WATER CONSERVATION AND MANAGEMENT: Water conservation for commercial and industrial facilities, water quality management, management of freshwater and wastewater, recycling and reuse of water, water conservation, need of ensuring quality and cost-effectiveness of water harvesting.

#### **UNIT-III**

08 Hours

RS & GIS application in groundwater conservation, harvesting, artificial recharging and management of water resources.

- **1. Explain** the basics of groundwater geology, concepts of rainwater harvesting, water conservation and groundwater recharging with their significance
- **2. List, categorize** and **explain** aquifer parameters, types of wells, well inventories, **Inspect** the significance of water quality and geology in groundwater recharging.

- **3. List, appraise and explain** various traditional and artificial water harvesting and groundwater recharging techniques, site specific selection procedures, their benefits and problems,
- **4. Examine** different water conservation & water quality management techniques, **assess** their suitability and cost effectiveness
- **5. Identify, appraise** and **explain** the application of Geoinformatics in water harvesting, conservation, artificial recharging and management of water resources

INTRODUCTION TO GEOINFORMATICS							
Course Code:	CV2334-1	Course Type	PEC				
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03				
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50				
Prerequisite	CV2004-1	•					

# **Course Objectives:**

- **1. Explain** the basic principles of Geoinformatics comprising Remote sensing, Photogrammetry, GPS, GNSS & GIS
- **2. Explain** the stages and techniques of photogrammetry, aerial photo interpretation, visual & digital image processing, enhancement and interpretation
- **3. Explain** and **Appraise** GIS its components, data structures, process and operation, Map and its projections, components, preparation and overlays
- **4. Explain** the GIS functionality and **Appraise** the significance of GEOINFORMATICS (Photogrammetry, RS, GPS, GNSS & GIS) in real world applications.

UNIT-I 16 Hours

**Remote sensing and its Principles:** Physics of remote sensing, EM spectrum, Blackbody concept, atmospheric windows, spectral response of common earth features.

**Platforms & Sensors:** Ground based, Air borne and Space borne platforms, Active and Passive Sensors, Photographic sensors, scanners, radiometers, RADAR and thermal infrared, hyper spectral remote sensing, Indian satellites and sensors: capabilities, data products

**Photogrammetry**: Basic principles of Aerial photography and Photogrammetry, Flight procedures, Aerial Photo Interpretation and Analysis techniques.

**Satellite Image Interpretation and Analysis techniques:** Visual & Digital Image interpretation, Interpretation elements, False Colour Composites (FCC).

UNIT-II 16 Hours

**Digital Image Processing and Analysis**: Digital image formats, pre-processing and processing (DIP), image restoration/enhancement procedures, information extraction, pattern recognition concepts, post processing procedures.

**Geographic Information System -concept and spatial models**: Fundamentals of GIS, spatial and non-spatial data, vector and raster GIS, GIS Hardware and software, georeferencing, digitization, thematic maps, Overlay Analysis, Operation of GIS, Co-ordinate systems and map projections, Map scale, data display and cartography.

UNIT-III 08 Hours

**Geoinformatics and Virtual GIS:** Modern Surveying and Geoinformatics, <u>GPS & GNSS.</u> **GIS Functionality**: Introduction, data acquisition, preliminary data processing, data storage and

retrieval, spatial search and analysis, graphics and interaction, <u>Virtual GIS and Real-world applications</u>.

- **1. Define** and **explain** the principles of Remote Sensing and **list** various types of platforms, sensors & resolutions in RS with a special reference to Indian satellites and data products.
- **2. Explain** Photogrammetry, its basic principles, elements of photo interpretation, Visual & Digital Image interpretation techniques

	3.	<b>Explain</b> different stages involved in Digital Image Processing, various image enhancement
		techniques, <b>list</b> and <b>classify</b> the digital image formats and the extracted information for
		various purposes.
Γ		

- **4. Explain** and **Appraise** GIS its components, data structures, process and operation, Map and its projections, components, preparation and Overlays.
- **Explain** the GIS functionality and **appraise** the significance of GEOINFORMATICS (Photogrammetry, RS, GPS, GNSS & GIS) and Virtual GIS in real world applications.

SOLID WASTE MANAGEMENT							
Course Code:	CV2335-1	Course Type:	PEC				
Teaching Hours/Week (L: T: P: S):	3	Credits:	03				
Total Teaching Hours:	40	CIE + SEE Marks:	50+50				
Prerequisite	CV2003-1						

# Course Objectives: This Course will enable students to

1.	Impart the knowledge of present methods of solid waste management system and to
2.	analyze the drawbacks.
3.	Understand various waste management statutory rules for the present system.
4.	Analyze different elements of solid waste management and design and develop recycling
	options for biodegradable waste by composting.
5.	Identify incineration technologies and waste to energy incineration methods

#### **UNIT-I**

16 Hours

**Introduction**: Scope and importance of solid waste management, definition and functional elements of solid waste management,

**Sources**: Sources and types of solid waste, composition of municipal solid waste, generation rate and conventional solid waste disposal methods.

**Collection and transportation of municipal solid waste:** services, systems and economics, Municipal Solid waste (Management and Handling) 2016 rules.

**Composting:** Aerobic and anaerobic process, Vermicomposting.

**Sanitary land filling**: definition, site selection, methods, stages, leachate movement and control, advantages and disadvantages

#### **UNIT-II**

16 Hours

# Incineration, Air emission control and Energy Recovery:

Types of incinerators, air pollution control process sources – air pollutants and their effect on health and environment. Air pollution control strategy – particulate and gaseous pollution control devices, types of waste to energy technologies.

**Hazardous waste management**: Definition, identification, classification of hazardous waste, onsite storage, collection, transfer and transport, processing, disposal, hazardous waste management rules 2016(India).

**E-waste management**: Definition, categories, impacts on human health and environment, recycling and recovery an integrated approach, e-waste generation and management status in india, E-waste management rules 2016(India).

#### **UNIT-III**

08 Hours

**Biomedical waste management:** Classification, collection, transportation, disposal and treatment of biomedical waste, biomedical waste management rules 2016(India).

**Plastic waste management:** Sources, types, uses, impact of plastics on marine life, effect on wildlife, human health and environment. Practices- use of plastic waste in roads, greener alternatives. Plastic waste management rules 2016(India).

**Construction and demolition waste management**: origin, components, proper management, recycling, construction and demolition waste management rules.

Government initiatives for solid waste management: Swachh Bharat Mission, Smart City.

# Course Outcomes: At the end of the course student will be able to

- **1. Explain** the basic engineering principles of solid waste management, **identify** improper practices and **summarize** the environmental implications.
- 2. Outline the need for economics in collection and transportation of solid waste and select
- **3. Explain** the process of incineration, energy recovery and **illustrate** the environmental impacts of incineration.
- **4. Plan** the transportation protocol for hazardous wastes, e-waste and choose the treatment and disposal methods.
- **Develop** an idea on conventional handling and treatment options for biomedical, plastic, construction and demolition waste and **discuss** government initiatives for waste management

HYDROLOGY AND IRRIGATION ENGINEERING								
Course Code:	CV2336-1	Course Type	PCC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50					

# **Course Objectives:**

- Explain hydrological cycle, water budget equation, **determine** mean rainfall and missing rainfall and its measurements.
   Applyze water losses like infiltration, evaporation and components of runoff
- **2.** Analyze water losses like infiltration, evaporation and components of runoff.
- **3.** Explain systems and methods of irrigation, reference crop evapotranspiration and irrigation efficiencies.
- **4.** Distinguish canals, canal regulation works, cross drainage works and design irrigation channels using silt theories
- **5.** Analyse stability of gravity dams and explain types and failure of earthen dams.

#### **UNIT-I**

INTRODUCTION 06 Hours

Definition, importance of hydrology, global water availability, practical applications of hydrology, concept of catchment and water budget equation.

Forms and types of precipitation, measurement of rain fall - recording and non-recording type of rain gauges, computation of mean rainfall and missing rainfall, moving average curve, mass curve, rainfall hyetographs.

WATER LOSSES 06 Hours

Introduction, infiltration, factors affecting infiltration capacity, measurement (double ring infiltrometer), Horton's infiltration equation, infiltration indices. Evaporation- process, factors affecting evaporation, evapotranspiration, PET, AET, estimation of ET.

RUNOFF 04 Hours

Components and factors affecting runoff, rainfall - runoff relationship - regression analysis, peak runoff (flood) estimation - rational method.

### **UNIT-II**

IRRIGATION 08 Hours

Benefits and ill effects of irrigation, Water logging, Systems and Methods of irrigation, Reference crop evapotranspiration - crop coefficients, crop water requirements, irrigation water requirements, irrigation efficiency, frequency of irrigation.

CANALS 08Hours

Types and alignment of canals, design of irrigation channels for alluvial soils using - Lacey's and Kennedy's methods, description of canal drops, canal regulators and cross drainage works.

#### **UNIT-III**

RESERVOIRS 03 Hours

Types, investigation for reservoir sites, storage zones, determination of storage capacity and yield of a reservoir using mass inflow curve.

DAMS 05Hours

GRAVITY DAMS: Forces acting, modes of failure, elementary and practical profile, stability analysis- steps of design by analytical method only.

EARTHEN DAMS: Types and modes of failure.

# Course Outcomes: At the end of the course student will be able to

1.	<b>Explain</b> catchment, water budget equation and <b>determine</b> mean rainfall and missing
	rainfall.
2.	Determine water losses, runoff and develop rainfall -runoff relationship applying
	regression analysis.
3.	<b>Explain</b> systems and methods of irrigation, reference crop evapotranspiration, crop and
	irrigation water requirements.
4.	<b>Explain</b> the alignment of canals, <b>design</b> irrigation channels applying Lacey's and Kennedy's
	theories and <b>discuss</b> canal drops, canal regulators and cross drainage works
5.	Find the storage capacity of reservoirs, analyze stability of gravity dams and explain the
	types and failures of earthen dams

3D BIM - AUTODESK REVIT							
Course Code:	CV2241-1	Course Type	PEC				
Teaching Hours/Week (L: T: P: S)	1:0:2:0	Credits	03				
Total Teaching Hours	40	CIE + SEE Marks	50+50				
Prerequisite	CV1004-1	•					

# **Course Objectives:**

1.	To know the interface of the Revit world and create the model, views, structural items.
2.	To add stairs, ramps, railings, floors and roofs in the model
3.	To create the ceilings, interiors, dimensioning, annotating and working with revit edit tools.
4.	To show the detailing of the model, creating specific views, area plans.
5.	To complete the project by using Autodesk Revit tool

#### **UNIT-I**

16 Hours

**The Autodesk Revit World -** The Revit Interface, the Project Browser, File Types and Families. **Creating a model** - Placing Walls, Using Reference Planes, Editing Wall Joins, Placing Doors

**Creating a model** - Placing Walls, Using Reference Planes, Editing Wall Joins, Placing Doors and Windows.

**Creating views** –Creating levels, creating and modifying building sections, adding wall section, creating detail sections, creating callouts, creating and modifying a camera view, creating an elevation. **Structural items** – Adding structural grids, structural columns, structural framing, foundation systems, structural footings.

**Stairs, Ramps, and Railings** – Creating stairs by using rise/run function, winding staircase, custom railing system, custom stairs, adding ramps.

**Floors** – Placing floor slab, building a floor by layers, splitting floor materials, pitching a floor to a floor drain, creating shaft openings.

**Roofs** – Placing roofs by footprint, creating a sloping roof, creating roof by extrusion, adding a roof dormer.

#### UNIT-II

15 Hours

**Ceilings and interiors –** creating ceilings, ceiling openings and soffits, interior design, alternate floor materials

Working with the Revit tools – Basic edit, Array, mirror, align, split element.

**Dimensioning and Annotating** – Selecting and applying dimensioning, placing text and annotation. **Detailing** – Working with line weights, drafting on top of the detail, adding notes, creating blank drafting views.

**Creating specific views and match lines –** Duplicating views, creating dependent views, adding match lines.

### Creating sheets and printing, creating rooms and area plans

#### **UNIT-III**

9 Hours

### **Project based learning**

Create a building model of dimension 50' x 80'. Should include the following features; Plan, Elevation, Section details, Electrical layout, plumbing layout, landscaping, 3D views.

1.	To <i>illustrate</i> the interface of the Revit world and create the <i>model</i> , views, structural items.
	(L3)
2.	<i>Model</i> stairs, ramps, railings, floors and roofs. (L3)
3.	<i>Create</i> the ceilings, interiors, dimensioning, annotating and working with revit edit tools. (L3)
4.	<i>Model</i> , show the detailing of the <i>plan</i> by creating specific views and represent the area plans.
	(L3)
5.	<i>Create</i> the project by using Autodesk Revit tool (L6)

CAD IN CIVIL ENGINEERING							
Course Code:	CV2242-1	Course Type	PEC				
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03				
Total Teaching Hours	40	CIE + SEE Marks	50+50				
Prerequisite	CV2602-1						

# **Course Objectives:**

1.	Understand the analysis by software tool
2.	<b>Identify</b> different types of methods of analysis using software's
3.	Assess the geotechnical problems using industry best software's
4.	<b>Analyse</b> the strength of various types of structural members as per the codal provisions
5.	<b>Design</b> the various civil Engineering structures using software's

# UNIT-I

### **STRUCTURAL ANALYSIS**

16 Hours

Structural Analysis of 2D and 3D Trusses, Structural Analysis of Continuous Beams using for different types of loadings and support conditions.

Structural Analysis of 2D and 3D Rigid and Braced Frames for different types of loadings, support conditions, section orientations and stiffness variation between columns and beams.

### **UNIT-II**

#### **GEOTECHNICAL DESIGN**

14 Hours

Analysis and design of retaining walls using CAD software.

### **UNIT-III**

#### **SPREAD SHEET**

10 Hours

Creating design sheets using Microsoft Excel.

# Course Outcomes: At the end of the course student will be able to

1.	Explain the types analysis, structural analysis methods and procedure (L2)
2.	Create 2D and 3D Models for analysis with various end conditions. (L3)
3.	Plan a column orientation for different types of buildings (L5)
4.	Analyse Retaining wall and 3D frames. (L3)
5.	Design the analysed structures using MS Excel. (L6)

FUNDAMEN	TALS OF MA	CHINE LEARNING	
Course Code:	CV2243-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50
Prerequisite			

# **Course Objectives:**

- Understand the need and basics of machine learning.
   Learn ANN and Decision Tree model.
   Explore the various learning algorithms using Supervised Learning.
- **4.** Understand the important aspects of Analytical Learning and difference between Analytical and Inductive Learning Algorithms.
- **5.** Analyse the techniques related to reinforcement learning.

#### **UNIT-I**

16 Hours

**Introduction**: Well posed learning problems, designing a Learning system, Perspectives and Issues in Machine Learning.

**Concept Learning**: Concept learning task, Concept learning as search, Find-S algorithm, Version Space and Candidate Elimination Algorithm, Inductive Bias.

**Decision tree**: Representation, Appropriate problems for decision tree learning, Basic decision tree learning algorithm. Hypothesis Space Search, Inductive Bias, Issues in Decision Tree Learning.

**Artificial Neural Networks**: Introduction, Neural Network Representations, Appropriate problems, Perceptrons, Back propagation algorithm.

### **UNIT-II**

15 Hours

**Instance Based Learning**: k-nearest neighbor learning, Locally Weighted Regression, Radial Basis Functions, Case-Based Reasoning, Remarks on Lazy and Eager Learning.

**Bayesian Learning**: Bayes theorem, Bayes theorem and concept Learning, Maximum Likelihood, Minimum Description Length, Bayes Optimal Classifier, Gibbs Algorithm, Naive Bayes Classifier, Bayesian Belief Networks, EM Algorithm.

**Analytical Learning**: PROLOG-EBG, Explanation Based Learning.

Combining Inductive and Analytical Learning: Inductive—Analytical Approaches to Learning, Using Prior Knowledge to Initialize the Hypothesis, Alter the Search Objective, Augment Search Operators.

#### **UNIT-III**

09 Hours

# **Reinforcement Learning:**

Learning Task, Q Learning, Non Deterministic Rewards and Actions, Temporal Difference Learning.

Course Outcomes: At the end of the course student will be able to

**1.** Acquire the fundamental concept and importance of machine learning.

2.	Demonstrate the application of Decision Tree and ANN and Genetic algorithm for real world problems.
3.	Design and implement algorithms for supervised learning system.
4.	Design and implement algorithms for Analytical and Inductive Learning.
5.	Develop machine learning algorithm and reinforcement techniques for real world problems.

GIS W	ITH QUANTL	JM GIS	
Course Code:	CV2244-1	Course Type:	PEC
Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	03
Total Teaching Hours:	40	CIE + SEE Marks:	50+50
Prerequisite	CV2604-1		

# Course Objectives: This Course will enable students to

1.	Explain the basic principles of remote sensing	
2.	Summarize the concepts of VIP and DIP	
3.	Explain the components and principles of GIS	
4.	Study the photogrammetry techniques	
5.	Explains the concepts of GPS and applications	

#### **UNIT-I**

# **Introduction; Remote Sensing**

08 Hours

Basics: Fundamentals of Remote Sensing, Electromagnetic Spectrum, Process of remote sensing, Blackbody Radiation, Energy Interactions with earth atmosphere and surface features, spectral reflectance curves-For Vegetation, soil & water.

Sensors: Definition, Types (Typical Sensor used in optical remote sensing, Thermal sensor, Synthetic Aperture Radar) Classification Plat Forms: Definition & Types: Airborne & Space Borne platforms, Plat form characteristics. Indian Remote Sensing Programme: Definition, Objectives, Data Products.

VIP and DIP 08 Hours

Visual Image Interpretation: Definition, Objectives, Keys & Elements of Visual Image interpretation. Digital Image Processing (DIP): Definition, Need, Stages of DIP-Image rectification & restoration, Image Enhancement-Contrast Manipulation-Grey Level Thresholding, Classification-Brief discussion of classification procedure for Supervised & Unsupervised Classification Techniques.

#### **UNIT-II**

GIS 07 Hours

Introduction, basics of GIS- definition of GIS, components of GIS, GIS work flow, representing spatial data, raster and vector data. Coordinate systems and map projections, datums, spatial data input, Non spatial data Brief introduction to measurements in GIS, georeferencing, map overlays, neighborhood functions, spatial interpolation, network analysis, DEMs, surface analysis, GIS data modelling,

# Photogrammetry 08 Hours

Basics of Photogrammetry : Acquisition of Arial photographs, Aerial Camera, Flight Planning, Photograph processing & feature extraction

### UNIT-III

GPS 05 Hours

Global Positioning System, The 3 segments of GPS, How GPS Works, Triangulation, Sources of GPS Error, GPS Terminology, Applications

Land use/cover mapping, Agriculture, Urban and regional planning applications, Applications in water resources and management, Environmental applications,

04 Hours

### **Course Outcomes:** At the end of the course student will be able to

|--|

- **2.** Interpretation of digital images
- **3.** Explain the components of GIS
- **4.** Understand the photogrammetric technique
- **5.** Explain the application of RS and GIS

PYTHON PROGRAMMING					
Course Code:	CV2245-1	Course Type	PEC		
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03		
Total Teaching Hours	40	CIE + SEE Marks	50+50		
Prerequisite	IS1001-1	·			

# **Course Objectives:**

- **1.** Explain the elementary programming constructs and file operations and use it in Python programming.
- **2.** Describe the concepts like strings, conversion of strings to numbers, lists, tuples, and dictionaries and use these in the python programming.
- **3.** Illustrate the functions, recursive functions and object oriented programming concepts in Python.
- **4.** Construct a Graphical User Interface (GUI) and write a multi-threaded and a Client/Server program in Python.
- **5.** Perform the database connection and Common Gateway Interface (CGI) programming in Python.

### **UNIT-I**

15 Hours

Introduction to python, the concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program.

Understanding error messages; Conditions, boolean logic, logical operators; ranges; Control statements: if-else, loops (for, while); short circuit evaluation.

Strings and text files; manipulating files and directories, os and sys modules; text files: reading/writing text and numbers from/to a file; creating and reading a formatted file (csv or tab-separated).

String manipulations: subscript operator, indexing, slicing a string; strings and number system: converting strings to numbers and vice versa. Binary, octal, hexadecimal numbers. Lists, tuples, and dictionaries; basic list operators, replacing, inserting, removing an element; searching and sorting lists. Dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.

#### **UNIT-II**

16 Hours

Design with functions: hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Program structure and design; Recursive functions.

Classes and OOP: classes, objects, attributes and methods; defining classes; design with classes, data modeling; persistent storage of objects inheritance, polymorphism, operator overloading (\_eq\_\_,\_str\_, etc); abstract classes; exception handling, try block.

Graphical user interfaces; event-driven programming paradigm; creating simple GUI; buttons, labels, entry fields, dialogs; widget attributes - sizes, fonts, colors layouts, nested frames.

Multithreading, Networks, and Client/Server Programming.

#### **UNIT-III**

09 Hours

Python database application programmer's interface (DB- API), connection and cursor objects, Type objects and constructors, python database adapters.

Creating simple web clients, introduction to CGI, CGI module, building CGI applications, python web application frameworks.

## Course Outcomes: At the end of the course student will be able to

1.	Explain the basic program constructs and file operations in Python and express it.
2.	Design the Python programs using the concepts like strings, conversion of strings to
	numbers, lists, tuples and dictionaries.
3.	Implement the functions and object oriented programming concepts in python.
4.	Create a Graphical User Interface, multiple threads and Client/Server programs in python.
5.	Implement a database connection and CGI programs in python.

# **APPLICATION OF RS&GIS FOR WATER RESOURCES**

# **MANAGEMENT**

Course Code:	CV2246-1	Course Type	PCC
Teaching Hours/Week (L: T: P: S)	1:0:4	Credits	03
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	Understand the concepts of remote sensing techniques
2.	Understand the concepts of image processing techniques
3.	Analyze components of GIS and map making process
4.	Carry-out the project related to water resources management
5.	Carry-out the preparations of thematic maps and analysis

# **UNIT-I**

# **INTRODUCTION- Remote Sensing**

08Hours

Introduction, what is Remote Sensing? Remote vs. *In Situ* Sensing, Passive and Active Remote Sensing, Sensor Types, Platforms, , Remote Sensing, Electromagnetic Spectrum (EMS), Electromagnetic Wave, EMR Energy, Energy Interactions in the Atmosphere, EM/Atmospheric Interactions: Scattering, Absorption, Atmospheric Windows, Spectral Characteristics, Sensor Selection, Spectral Reflectance Curves, specular versus diffuse reflection, Typical Spectral Reflectance curves for Vegetation, Soil and Water, Healthy Vs Stressed Vegetation, Atmospheric Influences on Spectral Response Patterns , Spatial and Temporal Effects, Advantages of Remote Sensing, Remote Sensing Images, Natural Colour Photography, False Colour composite, Remote Sensing Applications.

# **Aerial photography and Photogrammetry**

07 Hours

Origin, Types of aerial photograph, Photogrammetry, Parallax, Filters, Orthophotography, Characteristics and its uses, Spatial Resolution, Spectral Resolution, Radiometric Resolution, Temporal Resolution, Hyperspectral Remote Sensing, Signal-to-Noise Ratio (SNR), Storage Formats, Digital Images, Elements of digital image processing system, Comparison of Scanner Systems, Scale of an Image, Satellites & Orbits, examples Hyperspectral Imaging and its importance, DIP, Geometric Corrections, Radiometric Correction, Image Enhancement steps, Effects of Filtering, Information Extraction, Land cover analysis - Vegetation Indices, Image Classification, Objective of Image Classification, Supervised and Unsupervised Image Classification.

#### **UNIT-II**

GIS 08 Hours

What is a GIS? Spatial and non-spatial data, GIS Process, Raster, Vector Formats, Cartographic instruments, Basic properties of geographic features, Database Implementation, Role of DBMS,

**MAPS** –Introduction, Features, scale, classification, types, numbering of maps, Map projections, types, coordinate system.

GPS Introduction, How GPS Works? Principle, Segments, Trilateration, Navigation System Worldwide, Types of GPS Survey, Errors in GPS, Differential GPS, IRNSS, Applications of GPS.

Hands on sessions 08Hours

- 1. Introduction to QGIS, Importing vector and raster data, attribute table, metadata, feature selection, data export.
- 2. QGIS Plugins, downloading and installing, importance, open street map
- 3. Georeferencing an Image downloading map, importing, plugin, transformation setting
- 4. Creating Vector Features-point, lines and polygon, feature editing, adding attributes.
- 5. Vector Functions and querying, dissolve, join tables, split and merge vector, extraction, overlay, buffer and spatial query.
- 6. Data Acquisition and raster functions, DEM, terrain analysis –slope, aspect, hill shade and contour, raster calculator, interpolation, clipping
- 7. Map composition styling and labelling in QGIS, map elements, Map composition.
- 8. Bhuvan geoportal and Google earth, utilities, data preparation, importing data to QGIS
- 9. Introduction to Web GIS and Geoserver –Data sharing, geospatial web services, advantages, publishing vector file. creating workspace, editing new data source.
- 10. Geoserver Raster and SLD Integration publishing raster file creating SLD file, applying styles.

Project work		9 hours
Project work		
Project work		
Project work		

Project work presentation and report submission.

CIE will be based on the submission of project report and presentation.

Course Outcomes: At the end of the course student will be able to

1.	Plan to use suitable remote sensing imagery for the water resources applications
2.	<b>Develop</b> and <b>implement</b> the concepts of different image processing techniques
3.	Analyze components of GIS and to utilize it for map making process
4.	<b>Design</b> the methodology for water resources management
5.	Create thematic maps created

JAVA PROGRAMMING											
Course Code:	CV2342-1	Course Type	PEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	CV2007-1	-									

# **Course Objectives:**

1.	To write, test, and debug simple Python programs.
2.	Use functions for structuring Python programs.
3.	Represent compound data using Python lists, tuples, and dictionaries.
4.	Read and write data from/to files in Python.

### **UNIT-I**

16 Hours

Introducing Classes – Class Fundamentals, Declaring Objects, Assigning Object Reference Variables, Introducing Methods, Constructors, this keyword, Method overloading, Using objects as parameters, Argument passing, Returning objects, Access control, static, final, Using command line arguments, variable length arguments.

Inheritance – Inheritance Basics, Using super, creates a Multilevel Hierarchy, When constructors are called? Method Overriding, Using abstract classes, Using final with Inheritance.

Packages and Interfaces – Packages, Access protection, Importing Packages, Interfaces.

Exception Handling – Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, multiple catch Clauses, Nested try statements, throw, throws, finally.

# **UNIT-II**

15 Hours

Multithreaded Programming – The Java Thread Model, The Main Thread, Creating a Thread, Creating Multiple Threads, Using isAlive() and join(), Thread Priorities, Synchronization, Inter-thread Communication.

Event Handling -Two Event Handling Mechanisms, The Delegation Event Model, Event Classes, Sources of Events, Event Listener Interfaces, Using the Delegation Event Model.

Working with Windows, Graphics and Text - Overview, AWT Classes, Window Fundamentals, Working with Frame Windows, Creating a Frame Window in an Applet, Creating a Windowed Program, Displaying Information within a Window, Working with Graphics, Working with color, Setting the Paint Mode, Working with Fonts, Managing Text Output Using Font Metrics.

### **UNIT-III**

09 Hours

Introducing Swings – component and container, Event handling, Painting. Exploring Swings, Swings UI components.

Input/Output – I/O Basics, Reading Console Input, Writing Console Output, The Print Writer Class. File Handling - Serial Access Files, File Methods, Redirection, Command Line Parameters, Random Access Files.

Java Database Connectivity (JDBC) - The Vendor Variation Problem, SQL and Versions of JDBC, Creating an ODBC Data Source, Simple Database Access, Modifying the Database Contents, Transactions, Meta Data

1.	Write, test, and debug simple Python programs. Implement Python programs with							
	conditionals and loops.							
2.	Develop Python programs step-wise by defining functions and calling them.							
3.	Use Python lists and tuples for representing compound data.							
4.	Use Python dictionaries for representing compound data.							
5.	Read and write data from/to files in Python

PROJECT PLANNING USING SOFTWARES												
Course Code:	CV2343-1	Course Type	PEC									
Teaching Hours/Week (L: T: P: S)	1:0:2:0	Credits	03									
Total Teaching Hours	40	CIE + SEE Marks	50+50									
Prerequisite		•										

# **Course Objectives:**

1.	To study the types of projects, organization structure and project life cycles								
2.	To study the creation of project file and input data using M S Project.								
3.	To study the techniques of network analysis, prepare WBS and estimate resources, duration.								
4.	To schedule a project, assign resources and track status of project.								
5.	To prepare the progress report and perform earned value analysis of the project.								

# **UNIT-I**

16 Hours

Project definition, Time bound project, Cost bound project, Performance (quality) bound project, Safety bound project. Project sequence, Organization structure, Bar chart, Mile stone chart, Project life cycles. **Working in MS Project:** Creating a Simple Project, Setting Up a Project File, Identifying the activities.

#### **UNIT-II**

15 Hours

**Network Analysis** - Activity and event, Floats; Precedence diagrams, Activity definition, Work break down structures (WBS), Estimation – Resources, duration. Project management plan, Progress reporting, Cost control, Earned value analysis.

**Working in MS Project:** Building a Schedule, building a Team for Project, Assigning Resources to Tasks, Setting Up a Project Budget, Tracking Status, Managing Change.

Evaluating and Correcting Project Performance, Reporting on Projects, closing a Project, Working on More Than One Project, Exchanging Data Between Programs, Linking and Embedding.

### **UNIT-III**

09 Hours

**Working in Primavera:** Overview of Primavera, Creating Simple Project, Scheduling, Assigning Resources.

## Course Outcomes: At the end of the course student will be able to

1.	<b>Explain</b> the types of projects, organization structure and project life cycles. (L2
2.	Create a project file and input the data using M S Project. (L3)
3.	Plan a project using the techniques of network analysis; Organise WBS and Estimate
	resources, duration. (L5)
4.	<b>Develop</b> the schedule of a project, assign resources and track status of project. (L3)
5.	Compile the progress report and analyse earned value of the project. (L6)

#### Scheme of Evaluation: CIE

A project report should include Schedule, WBS, Resource Estimation, Duration Estimation and budget for the following projects

- a. Residential project
- b. Multi-storeyed project

# **SEMESTER END EXAMINATION - SEE**

Scheduling a Project in software : 10 Marks
 Preparation of WBS : 10 Marks
 Assigning of resources and cost : 10 Marks

Reporting on project : 10 Marks

Viva voce : 10 MarksTotal : 50 Marks

#### **TEXTBOOKS:**

- 1. Project Planning and Control Fourth Edition (2003) Eur Ing Albert Lester, CEng, FICE, FIMechE, FIStructE, FAPM, Elsevier Butterworth-Heinemann Linacre House, Jordan Hill, Oxford OX2 8DP
- **2.** Practice standard for work breakdown structures, Project Management Institute, Newtown square, Pennsylvania USA, 2001.
- **3.** Thomas E Uher, Programming and scheduling techniques, UNSW press book, 2003.

#### **REFERENCE BOOKS:**

- **1.** Paul Eastwood Harris, Planning and Control using Microsoft® PROJECT 2013 and 2016, East wood Harris Pty Ltd, 2016.
- **2.** Bonnie Biafore, Microsoft Project 2013 The missing manual, O'Reilly Media, Inc., first edition 2013.

SOFTWARE ADVANCES IN PAVEMENT DESIGN						
Course Code:	CV2344-1	Course Type	PEC			
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03			
Total Teaching Hours	40	CIE + SEE Marks	50+50			
Prerequisite	CV2108-1					

# **Course Objectives:**

5.

1.	Understand the flexible pavement design technique using IRC: 37-2018 recommendations.
2.	Understand the fundamentals of flexible pavement analysis using KENLAYER application of
	KENPAVE software.
3.	Comprehend the rigid pavement design technique using IRC: 58-2015 recommendations.
4.	Understand the fundamentals of rigid pavement analysis using KENSLAB application of
	KENPAVE software.

# Carry-out the design of bituminous overlay design using IRC: 81 and IRC:115 guidelines. UNIT-I

# Flexible Pavement Design using IRC 37-2018 guidelines

10 Hours

Introduction, Fundamental concepts in flexible pavement design as per IRC 37-2018, Steps in design of pavement, Pavement design examples for (i) Pavement section with bituminous layer(s), granular crack relief layer, CTB, and CTSB; (ii) Pavement Section with bituminous layer(s), SAMI crack relief layer, CTB, and CTSB showing; (iii) Pavement Section with bituminous layer(s), emulsion/foam bitumen stabilised RAP/virgin aggregate layer and CTSB; (iv) Pavement Section with bituminous layer(s), granular crack relief layer, CTB, and GSB; bituminous layer(s), granular base (WMM) and CTSB. Perpetual Pavement designs. Introduction to the use of **IIT Pave software** and design examples.

# **Application of KENPAVE in Flexible Pavement Design**

05 Hours

Introduction to KENLAYER package of KENPAVE software, basic concepts, Analysis of pavement using KENLAYER package, design steps and problems.

#### **UNIT-II**

### Rigid Pavement Design using IRC 58-2015 guidelines

10 Hours

Introduction, Fundamental concepts in rigid pavement design as per IRC 58-2015, Salient Features, Typical cross sections, Damage analysis, Steps in design of pavement, Design of various Components of rigid pavements as per IRC, Illustrative examples for rigid pavement design: (i) Concrete Pavement with tied concrete shoulders, (ii) Concrete Pavement with no concrete shoulders, (iii) Concrete Pavement with widened outer lanes, (iii) Concrete Pavement bonded to DLC layer. Introduction to the use of **IRC-58 2015** excel sheet and design examples.

# **Application of KENPAVE in Rigid Pavement Design**

05 Hours

Introduction to KENSLAB package of KENPAVE software, basic concepts, Analysis of pavement using KENSLAB package, design steps and problems.

### **UNIT-III**

#### **Overlay Design and applications**

10 Hours

**Bituminous overlay design using IRC 81 - 1997**: Introduction to BBD studies, Steps in BBD overlay design, development of excel sheets and solving the problems on overlay design.

**Bituminous overlay design using IRC 115-2014**: Introduction to FWD test, corrections and back calculations. Steps in FWD overlay design, Use of KGP BACK package and IIT-PAVE package for

overlay design using FWD datasets. Example problems. Comparison of BBD and FWD method of overlay design.

## Course Outcomes: At the end of the course student will be able to

- Identify the factors contributing to accidents
   Collect the necessary data pertaining to road crashes and prepare comprehensive accident crash database.
   Perform the statistical analysis of accident crash data.
   Describe the traffic management measures for accident prevention
- **5. Explain** the road safety audit and **prepare** a detailed audit report.

IOT IN	<b>CIVIL ENGINE</b>	ERING	
Course Code:	CV2345-1	Course Type:	PEC
Teaching Hours/Week (L: T: P: S):	3:0:2:0	Credits:	03
Total Teaching Hours:	40	CIE + SEE Marks:	50+50
Prerequisite			

#### Course Objectives: This Course will enable students to

1.	Know basic protocols in sensor networks.
2.	Program and configure Arduino boards for various designs.
3.	Python programming and interfacing for Raspberry Pi.
4.	Data Handling and Analytics.
5.	Design IoT applications in different domains

#### **UNIT-I**

# INTRODUCTION TO INTERNET OF THINGS

16 Hours

Introduction to Internet of Things, Characteristics of IoT, Physical design of IoT, Functional blocks of IoT, Sensing, Actuation, Basics of Networking, Communication Protocols, Sensor Networks.

#### UNIT-II

#### Implementation of IoT

15 Hours

Introduction to Raspberry Pi, Interfacing Raspberry Pi with basic peripherals, Implementation of IoT with Raspberry Pi.

Implementation of IoT with Raspberry Pi, Introduction to Software defined Network (SDN), SDN for IoT, Data Handling and Analytics.

#### UNIT-III

IOT APPLICATIONS 09 Hours

Business models for the internet of things, Smart city, Smart mobility and transport, Industrial IoT, Smart health, Environment monitoring and surveillance – Home Automation – Smart Agriculture

#### **Course Outcomes:** At the end of the course student will be able to

1.	Explain the concepts of remote sensing
2.	Interpretation of digital images
3.	Explain the components of GIS
4.	Understand the photogrammetric technique
5.	Explain the application of RS and GIS

<b>AIRPORTS</b>	& SEAPORTS	ENGINEERING	

Course Code:	CV 2251-1	Course Type	PSC
Teaching Hours/Week (L: T: P: S)	2:0:0:2	Credits	03
Total Teaching Hours	45	CIE + SEE Marks	50+50

# **Course Objectives:**

1.	Understand the concept of master planning of a modern airport
2.	Plan and design of key airside facilities, terminal building and landside works
3.	Provide inputs on the overview of port infrastructures and the design
	considerations and functional requirements of typical structures.

#### **UNIT-I**

06 Hours

Introduction and Typical Master Planning process of a commercial airport: Introduction-key features of a modern airport, Important Codes and aviation regulation organizations, Infrastructure in the Country, Need for Growth Requirements - Passenger Demand Capacity, New Airport envisaged for the Next 10 years.

Phases: Airport Master Plan Process, ICAO: Outline of Master Planning process, Case studies, Configuration of Runways, Topographical Survey of various airside elements/facilities, Layout plans, Functions of Terminal building, Data, Size, position and number of Arrival and Departure gates, MEP and HVAC Systems

06 Hours

**Planning of Landside works and Airside works:** Air Traffic Control Tower, Departure/Arrival Forecourt and approach roads, Drainage Planning, Multi- Level/Surface car parking/Waiting areas, arboriculture, Water harvesting cum storage/distribution, Fuel storage and supply, Renewable Energy, Data for Orientation and Design of Runway, Design of Taxiways, Aprons and drainage system, Airport capacity.

#### **UNIT-II**

06 Hours

**Navigational aids and pre-construction works:** Navigational and Meteorological Aids, Ducts and Runway/Approach Lighting Systems, Runway Marking, Air Cargo Facilities, Environmental impacts, Noise mitigation, Sustainability measures, Earthmoving Plants, Dumpers and Compaction Equipment, Tower Cranes and Hoists, Procurement and phasewise deployment of key resources and setting up of Site Infrastructure.

06 Hours

**Construction, Distress evaluation of airport pavements:** Design of flexible and rigid pavements, Construction: rigid pavement, Execution & Estimation of Other Layers of Flexible and Rigid Pavements, Airport Layout and Grading Plan, Types of Layers and Gradients etc., Typical Failures of Flexible and Rigid Pavements, Maintenance, Strengthening and Rehabilitation of pavements

# **UNIT-III**

06 Hours

**Overview of Ports and Harbours:** Introduction and Evolution of Ports and Harbours, Overview of Marine structures, Operation and components of Ports, Navigation Aids, Site Investigation and Survey, Design considerations and Functional requirements of typical structures, Design of breakwaters, Pre-cast planning, Cofferdams, Marine piling, Diaphragm wall, Modular construction, Load Out Jetty

#### Course Outcomes: At the end of the course student will be able to

1.	Comprehend the development of master plan for a modern commercial airport as
	per laid down codes and regulations
2.	Plan the various infrastructure elements on landside, Terminal building,
	Navigational aids to support the operations of airports
3.	Design the runways, taxiways, aprons, ducts; preconstruction works of airports
4.	Adopt the procedures of construction, maintenance and rehabilitation of airport
	pavements
5.	Interpret the design considerations, operations and components of ports

SECTORI ARI	D EVECUTION	
		OF PILE FOUNDATIONS

Course Code:	CV 2252-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	2:0:0:2	Credits	03
Total Teaching Hours	45	CIE + SEE Marks	50+50

#### **Course Objectives:**

1.	Introduce the concept of Piling works and design requirements for a pile
2.	Elaborate the construction procedures which are involved in different pile
	foundations
3.	Explain the different load test which need to be conducted on the piles.
4.	Understand the Environmental, Health and Safety standards which need to be in
	place for the handling of the pile works
5.	Elaborate on the bill of quantities of various Pile foundations

#### **UNIT-I**

06 Hours

# Introduction to piles, Design and construction of Bored Cast insitu piles and Driven Cast insitu piles:

Overview of Pile foundations, Selection Criteria, Common Design considerations, General Terminologies and Indian standard codes. Materials and Equipment, Construction procedures, workmanship, Vertical and Lateral Capacity calculations, Load tests, Case Studies of Bored cast insitu piles and Driven cast insitu piles

06 Hours

# Introduction, design and construction of precast driven and under reamed piles:

Materials and Equipment, Construction procedures, workmanship, Vertical and Lateral Capacity calculations, Load tests, Case Studies of precast driven piles, precast driven piles in pre-bored holes and Under reamed piles

#### **UNIT-II**

06 Hours

# Grouping and settlement of piles and testing:

Introduction to Grouping and Settlement of piles, Pile Group efficiency and Spacing, Capacity of Pile group, Settlement of Pile group, Case studies Introduction & Types of testing on piles and General requirements for testing, Pile Integrity tests - introduction & Equipment Types of Pile Integrity test, Data Recording & Interpretation of results, Introduction to quality assurance of piles, General requirement

**06 Hours** 

# **Quality control and Special Types of piles:**

Quality Control of BCIS, DCIS piles, Quality records and checklists. Materials, Equipment, manufacturing procedure, Design and installation, suitability and application and failure modes of spun piles and helical piles

**UNIT-III** 

conditions

# Software and Bill of quantities, Construction challenges:

Introduction to Bill of quantities for Bored cast insitu, Driven Cast insitu, Precast driven and Precast driven piles in pre-bored holes and undreamed piles. Challenges in bored and driven piles, Introduction to types of piling software, Software demonstrations (e.g., **PLAXIS**) and step-by-step design techniques for deep foundations. Modelling in Plaxis 2D.

# Course Outcomes: At the end of the course student will be able to

1.	Comprehend Basic design concepts, of pile foundations
2.	Compute capacity of piles and select suitable type of pile foundation based on soil

- **3. Apply** different construction procedures of pile foundation.
- **4. Design** and execute different load testing on piles
- **5. Compute** bill of quantities for pile foundations

# METRO RAIL TRANSPORTATION SYSTEMS AND CONSTRUCTION

Course Code:	CV 2253-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	2:0:0:2	Credits	03
Total Teaching Hours	45	CIE + SEE Marks	50+50

# **Teaching Department: Civil Engineering**

# **Course Objectives:**

- Elaborate on the salient features and types of Transit oriented development and its 1. significance Explain the planning, design and execution of elevated and underground Metro 2. viaducts, tunnels including monitoring systems and stations Explain the design Earth retaining structures used in Metro systems 3.
- Explain the different pre-excavation and tunnel support systems 4.

# **UNIT-I**

06 Hours

Introduction to Mass Rapid Transit System (MRTS, Planning of Metros and Site Investigation Overview of Metro, Transit Oriented Development, Feasibility Study for MRTS Project, Sustainable and Smart Technologies, Recent Advancements & Future Technologies (High Speed Rail Technology, 'Maglev & Ground Effect Trains etc.). Basic Interfacing Principles – Alignment, Urban level planning, constraints and restrictions, Sub surface investigations, Sampling techniques, Laboratory testing of Rocks and soils using CIVIL 3D

06 Hours

# **Elevated Metro stations and Viaducts:**

Introduction to Contracts, Overview of FIDIC standards, Introduction to Quality Systems, Precasting Yard Development, Types of Precast Super Structure, Precast Mould development, Formwork System Overview, introduction to Precast Erection, Superstructure launching Methods, Obligatory Spans, substructure and foundation Construction Methodology, Challenges in Foundation Construction

Alignment / Span configuration of elevated structures, Soil condition and type of foundations, Substructure system, choosing type of Pier based on alignment profile, Rail / Over Head Equipment mast, Station overall layout, Pier arm - spine wing / cantilever and Platform- precast/cast-in-situ system. Errection methods and case studies Overview of Elevated station, Analysis and Design, Spine beam method, Design of station components, Loads and introduction to IRC/IRS Codes, 'Analysis and Design of

superstructure, Substructure and foundation

**UNIT-II** 

06 Hours

Pre-excavation support systems, Tunnel support systems and Earth Retaining systems Need for pre-excavation supports, fore poling, face supports, grouting, Rock bolts, Rock anchors, Shotcrete, Rib reinforced shotcrete, Lattice girder and steel arches, Selection of

tunnel supports, Applicability of temporary and Permanent retaining systems, Sheet piles, soldier piles, secant piles and contiguous piles and Diaphragm walls, Establishing design situation, design life and geotechnical categorisation, Determination of ground water pressure and surcharges, Modelling of Diaphragm wall in Wallap software

06 Hours

# **Underground Metro Stations and Tunnels**

Underground Stations and its configurations, Shoring Systems, supporting systems, Construction Methodology (Bottom Up method/ Top Down method), Tunnelling methods-NATM, NMT, Drill and Blast, cut and cover Earth retaining structures, Secant pile wall design, Guide walls, Introduction to Loads, Load combinations, Fire resistant criteria and Floatation check, SOD restrictions & Element sizing for UG Stations, Design of all the components of UG station, Overview of Modelling of Stations in STAAD software

# **UNIT-III**

**06 Hours** 

# **Tunnel instrumentation and Monitoring systems and MEP in Metros:**

Purpose of instrumentation and monitoring, Geotechnical monitoring systems for underground structures, Load, stress and water pressure monitoring, Deformation monitoring, trigger limits and instrumentation monitoring plans, MEP systems - HVAC, Tunnel ventilation, Fire protection and fire alarm systems.

# Course Outcomes: At the end of the course student will be able to

- **1. Create** the basic layout of elevated and underground metro stations as per laid down codes and regulations
- **2. Interpret** design recommendations and Codes of Practice for Elevated and Underground Metros and select suitable construction practices
- **3. Design** the earth retaining systems for the excavations of underground stations
- **4. Select** suitable pre-excavation and tunnel support systems for different ground conditions
- **5. Comprehend** the tunnel instrumentation and monitoring systems

BRIDGE EN	GINEERING	PRACTICES	
Course Code:	CV 2351-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	2:0:0:2	Credits	03
<b>Total Teaching Hours</b>	45	CIE + SEE Marks	50+50

# **Course Objectives:**

1.	Determine the optimal solution of Bridge structure depending on various
	constraints and input parameters
2.	Analysis and Design of all components of bridges and cross drainage work with
	detailing
3.	Illustrate various Erection methods (Segmental, Balanced cantilever and Cable
	staved bridges etc.) with case studies in detail

#### **UNIT-I**

06 Hours

# **Introduction and Conceptual Design of Bridges:**

Introduction to bridges – Types of bridges based on Material, Structural form, Usage, span and support, alignment and decks – Auxiliary components of bridges.

Conceptual design based on planning, design and execution – Functional – Aesthetics – Inventory – different types of surveys – Investigations – Geometrical aspects as per IRC code

06 Hours

# Analysis and Design of Concrete & Pre-stressed concrete:

Loads due to Permanent loads – Prestressing loads – Live loads for Highway, Railway and Metro – Seismic – Thermal – Water Currents – Wind Forces – Accidental Loads – Creep & Shrinkage

Structural analysis methods – Hand computed methods – Grillage Analysis – Transverse Analysis – FEM Methods

Introduction to IRC Codal provisions – Ultimate and Serviceability Limit State Design – Prestressing systems– Cable profiling – End block design

#### **UNIT-II**

06 Hours

# **Analysis and Design of Composite Super Structure:**

Idealization and Grillage Analysis – Load Applications – ULS and SLS design Composite plate girder bridge – Modelling – Design according to IRC– Introduction to Truss and Bow String Truss Bridges.

**06 Hours** 

# **Design of Substructure and Foundation:**

Types of Substructure – Cantilever Pier – Portal Pier – Pier Cap – Bearings – Pedestals & Seismic restrainers Types of Foundation – Geotechnical capacities – Open foundation - Pile foundation - Well foundation

### **UNIT-III**

# **Erection Methods and Inspection, Monitoring & Maintenance of Bridges:**

Introduction to concept of Execution of Bridges – PSC I girder (Pre-& Post – Tensioned) – Truss Bridge –Balanced Cantilever Bridge – Segmental Bridge – Cable Stayed Bridge Installation of Sensors for Service Stage – Periodic inspection methods – Periodic Maintenance-Replacement of bearings, expansion joints etc.

#### Course Outcomes: At the end of the course student will be able to

	Analysis and Design of BCC composite Circles
	parameters
1.	<b>Obtain</b> solution of Bridge structure depending on various constraints and input

- **2. Analyse** and Design of RCC composite Girder
- **3. Design** of Substructure and Auxiliary components
- **4. Design** of different types of foundations for bridges
- **5. Concept** of different types of execution methods of Bridges and Inspection, Monitoring & Maintenance of Bridges

PROJECT MAN	AGEWIENT	OK ENGINEERS	
Course Code:	CV 2352-1	Course Type	PEC
Teaching Hours/Week (L: T: P: S)	2:0:0:2	Credits	03
Total Teaching Hours	45	CIE + SEE Marks	50+50

# **Course Objectives:**

1.	Understand the concepts of project management from planning to execution and
	how to apply them in projects.
2.	Prepare the resource, schedule, cost planning for an industrial project.

- Identify the risk and its management. 3.
- 4. Usage of **MS Project** as a tool for project management and monitoring.

#### UNIT-I

06 Hours

# **Contract Management and Scope Management:**

Introduction to Project Management, Project and Project Lifecycle - Process, Phases, Organization, Project Financial Feasibility Methods, Non-numerical Feasibility Methods. Basic Concepts of Contract Management, Essential elements, Contract Types, Tendering and Proposal Preparation, Key Commercial Terms and Conditions, Bid Evaluation and Contract Award, Contract Administration, Claim Management. Work Breakdown Structures- Creation & Case Study

06 Hours

# **Schedule and Resource Management:**

Approach to schedule management, Charts, Sequencing and Dependency, Network Diagram, Activity Duration, Critical Path Method, Float, Case study, Relationships, Case Study, Precedence Diagramming Method.

Resource Allocation and Resource Levelling, Case Study on Schedule Compression, PERT to Predict the Probability of Project Completion.

#### **UNIT-II**

06 Hours

# **Project Cost and Quality Management:**

Cost Estimation, Budget and Variance Analysis, Monitoring and Control, Cash Flows, Case Study. Occupational Health, Safety and Environment, Barriers, Quality Management System Chart and tools.

06 Hours

# **Procurement, Subcontracts and Stakeholder Management:**

Supply Chain Management, Logistics and Transportation, Vendor and Inventory Management. Stakeholder Analysis and Engagement, Project Communication, Dealing with Difficult Stakeholders.

#### **UNIT-III**

06 Hours

# **Project Risk Management and Project Monitoring:**

Process, Terminology, Identification, Analysis and Response Strategy

Analysis Techniques, Monitor and Control Schedule, Cost, Resources, Quality and risks Creating schedules, Assigning Resources, Cost, Evaluation, Optimization and Tracking

# Course Outcomes: At the end of the course student will be able to

1.	<b>Develop</b> WBS and estimate the resource requirements
2.	Prepare bar charts for work schedule
3.	Analyse the cost control monitoring and accounting methods
4.	Understand the quality control and safety during construction
5.	Create a project monitoring plan

# **E Books / MOOCs/ NPTEL**

1. L&T EduTech LMS Content

# ABILITY ENHANCEMENT COURSES

APPLICATION	S OF AI IN C	IVIL ENGINEERING	
Course Code:	CV2651-1	Course Type	AEC
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02
Total Teaching Hours	25	CIE + SEE Marks	50+50
Prerequisite	CS1002-1	•	

# **Course Objectives:**

1.	Define what is Neural Network and model a Neuron and Express both Artificial Intelligence and
	Neural Network
2.	Applications of ANN to various Civil Engineering Problems
3.	Develop various fuzzy membership functions, understand defuzzification sets and to apply the
	knowledge to solve some Engineering Problems
4.	Understand working principle of genetic algorithm and able to apply genetic algorithm to
	solve some real engineering problems

#### **UNIT-I**

#### **Introduction to Neural Networks:**

10 Hours

ANN definition, Neural Network, Human Brain, components, input, output and hidden layers, threshold value, weights. Models of Neuron, Biological Neural Network, Different ANN architectures, Training techniques for ANNs, Relationship of ANN with other technologies. Applications of ANN to solve Civil Engineering problems

#### **UNIT-II**

Fuzzy logic: 10 Hours

Introduction to Fuzzy logic, Fuzzy sets and membership functions, Operations on Fuzzy sets, Fuzzy relations, rules, propositions, implications and inferences, Defuzzification techniques, Some applications of Fuzzy logic. Applications of Fuzzy logic for various Civil Engineering problems.

#### **UNIT-III**

#### **Genetic Algorithms:**

05 Hours

Concept of "Genetics" and "Evolution" and its application to probabilistic search techniques, Basic GA framework and different GA architectures, GA operators: Encoding, Crossover, Selection, Mutation, etc. Working Principle of Genetic Algorithm, Applications of Genetic algorithm for various Civil Engineering problems.

#### **Course Outcomes:** At the end of the course student will be able to

Define what is Neural Network and model a Neuron and Express both Artificial Intelligence and Neural Network
 Understand the artificial neural networks and its applications.
 Understand the fuzzy logic and different membership functions and applications
 Develop the fuzzy logic sets and membership function and defuzzification techniques.
 Working principle, operators of Genetic algorithm and applications to solve some civil

FIRE SA	FETY IN BUI	LDINGS												
Course Code:	Course Code: CV2652-1 Course Type AEC													
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02											
<b>Total Teaching Hours</b>	25	CIE + SEE Marks	50+50											

#### **Course Objectives:**

1.	To understand the concept of high-performance green building and sustainability.
2.	To study and understand the function of materials used for designing green buildings and
	generate substantial cost savings.
3.	Learn about the selection of mechanical and electrical lighting systems. And learn about
	green building water supply and waste water supply systems.

#### **UNIT-I**

Introduction 10 Hours

Fire, change of state and latent heat, thermal expansion of solids, liquids and gases. Transmission of heat, combustion, Fire tetrahedron, and combustible solid, liquids and gases. Classification of Fire and different fire extinguishing methods, portable fire extinguishers, types and operating procedure. Fundamental Principles of Hydraulics, Atmospheres pressure and suction lift, use of Nozzle discharges. Advantages and disadvantages of Centrifugal pumps. Types of pumps and primers. Operation of pumps and primers, Types of ladders and trolleys. Pitching and climbing hints.

#### **UNIT-II**

#### **Safety Management**

10 Hours

Key elements of a safety and Health Management System-Policy & commitment, Planning, Implementation and Operation, Measuring Performance, Auditing and Reviewing performance Initial Safety and health Management System Review, Safety and health Management System model, safety and Health policy- Developing a workplace Safety and Health Policy, Planning – safety and Health objectives and Targets, performance standards, Implementation and Operation - structure and responsibilities- management responsibilities, individual responsibilities, Safety Consultation.

#### **UNIT-III**

#### **Risk assessment and Control**

05 Hours

Risk assessment and control- the legal Basis for risk Assessment, key stages of Risk assessment and control- use trained Risk assessors, preparation and Inventory, Identify the hazards, assess the risk, identify Appropriate Action, Risk assessment records and control. A simple Risk estimation example - Hazards, remedial measures, Motivation of employees, Insurance coverage of Industrial plant & personnel.

Course Outcomes: At the end of the course student will be able to

- Realize the methodologies involved in fire formation and Discuss the classification & causes 1. of fire at the workplace 2. Discuss the importance of various fire control mechanisms 3. Outline the factors involved in the prevention of fire Familiarize with workplace Inspection & reporting procedures and Describes various fire
- safety devices & their working mechanisms
- Details the essential requirements of the emergency evacuation plan and Recognize the 5. different types of fire extinguisher & their usage

GREEN BUILDING											
Course Code:	CV2653-1	Course Type	AEC								
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02								
Total Teaching Hours	25	CIE + SEE Marks	50+50								

# **Course Objectives:**

- To understand the concept of high-performance green building and sustainability. To study and understand the function of materials used for designing green buildings and 2. generate substantial cost savings. Learn about the selection of mechanical and electrical lighting systems. And learn about 3.
- green building water supply and waste water supply systems.

#### UNIT-I

Introduction 05 Hours

Introduction. Need for green building- Impact of building industry on energy resources, natural resources and environment. Green building-definition. Principles of green building. Life cycle assessment. Consideration while selecting material and design for longevity

05 Hours **Building Envelope** 

Building envelope- Conventional materials and Use of low energy materials - Base materials for RCC and Steel systems. Alternatives to structural systems, masonry, mortar, plastering, roofing, ceiling, flooring, doors, windows and wood work. Smart materials. Low energy construction- low energy material, locally sourced material and recycled material.

#### **UNIT-II**

#### Sustainable siting of building

05 Hours

Sustainable siting of building. Orientation of the building. Use of natural light, solar heat and ventilation. Fenestration and shading. Effective cooling and heating systems-solar passive techniques of heating and cooling in a building design.

**Thermal Comfort** 05 Hours

Thermal Insulation for roof and walls. Glazing and shading systems. Building finishes. Effective electrical systems- photovoltaic systems. Efficient HVAC systems. Efficient lighting system- efficient bulbs, occupancy sensor systems and light sensors. Efficient motors. Energy auditing and Certification systems-GRIHA, LEED BREEAM and IGBC etc

#### **UNIT-III**

**Water Conservation** 05 Hours

Conserving water in building- Water efficient fixtures- flow restrictors, sensors, no water fixtures. Alternatives for secondary uses. Rain water harvesting, solar water heaters and solar cooking. Low flush toilets, grey water recycling. Onsite treatment. Eco-friendly toilets. Reducing irrigation water requirements. Vertical farming. Xeriscaping.

# **Course Outcomes:** At the end of the course student will be able to

- 1. Apply the concepts of embodied energy and their calculations and design for longevity.
- Application of alternative energy efficient materials for various building components. 2.
- Orient and plan the building environment to suit to effectively utilize the natural light, solar 3. energy and other sources to ensure effective control on the inside environment of a building.
- Understand the implementation of thermal insulation system, energy saving bulbs etc.,

**5.** Understand the criteria involved in energy auditing and certification systems-GRIHA, LEED BREEAM and IGBC etc.

# INSTRUMENTATION AND SENSOR TECHNOLOGIES FOR CIVIL FINGINFERING APPLICATIONS

Course Code:	CV2654-1	Course Type	AEC
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02
Total Teaching Hours	25	CIE + SEE Marks	50+50

#### **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	To understand the concept of high-performance green building and sustainability.										
2.	To study and understand the function of materials used for designing green buildings and										
	generate substantial cost savings.										
3.	Learn about the selection of mechanical and electrical lighting systems. And learn about										
	green building water supply and waste water supply systems.										

#### UNIT-I

# Sensors & Transducer 05 Hours

Definition, Classification & selection of sensors, Measurement of displacement using Potentiometer, LVDT & Optical Encoder, Measurement of force using strain gauge, Measurement of pressure using LVDT based diaphragm & piezoelectric sensor.

05 Hours

Measurement of temperature using Thermistor, Thermocouple & RTD, Concept of thermal imaging, Measurement of position using Hall effect sensors, Proximity sensors: Inductive & Capacitive, Use of proximity sensor as accelerometer and vibration sensor, Flow Sensors: Ultrasonic & Laser, Level Sensors: Ultrasonic & Capacitive.

#### **UNIT-II**

#### **Virtual Instrumentation**

05 Hours

Graphical programming techniques, Data types, Advantage of Virtual Instrumentation techniques, Concept of WHILE & FOR loops, Arrays, Clusters & graphs, Structures: Case, Sequence & Formula nodes, Need of software-based instruments for industrial automation.

# **Data Acquisition Methods**

05 Hours

Basic block diagram, Analog and Digital IO, Counters, Timers, Types of ADC: successive approximation and sigma-delta, Types of DAC: Weighted Resistor and R-2R Ladder type, Use of Data Sockets for Networked Communication.

#### **UNIT-III**

# **Intelligent Sensors**

05 Hours

General Structure of smart sensors & its components, Characteristic of smart sensors: Self calibration, Self-testing & self-communicating, Application of smart sensors: Automatic robot control & automobile engine control.

#### Course Outcomes: At the end of the course student will be able to

**1.** Apply the concepts of embodied energy and their calculations and design for longevity.

2	2.	Application of alternative energy efficient materials for various building components.									
3	3.	Orient and plan the building environment to suit to effectively utilize the natural light, solar									
		energy and other sources to ensure effective control on the inside environment of a									
		building.									
4	ŀ.	Understand the implementation of thermal insulation system, energy saving bulbs etc.,									
5	5.	Understand the criteria involved in energy auditing and certification systems-GRIHA, LEED									
		BRFFAM and IGBC etc

SOFTWARE APPLICATIONS IN CIVIL ENGINEERING												
Course Code:	CV2655-1	Course Type	AEC									
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02									
<b>Total Teaching Hours</b>	25	CIE + SEE Marks	50+50									

#### **Course Objectives:**

1.	<b>Understand</b> the analysis by software tool.
2.	<b>Identify</b> different types of methods of analysis using software.
3.	<b>Analyse</b> the strength of various types of structural members as per the codal provisions.
1	Design the various civil Engineering structures using software

#### UNIT-I

# **Structural Analysis of Trusses and Beams**

05 Hours

Structural Analysis of 2D and 3D Trusses, Structural Analysis of Continuous Beams using for different types of loadings and support conditions.

# **Structural Analysis of Frames**

05 Hours

Structural Analysis of 2D and 3D Rigid and Braced Frames for different types of loadings, support conditions, section orientations and stiffness variation between columns and beams.

#### **UNIT-II**

Analysis of Buildings	05 Hours
Structural Analysis of one BHK Building.	
Analysis of Retaining Wall	02 Hours
Structural Analysis of Cantilever Retaining Wall	
Analysis of Bridges	03 Hours
Structural Analysis of Simple Slab Bridge	
UNIT-III	

Design of	f Structures	using	MS E	xcel		03 Hours
			_			

Creating Design spreadsheet for Beams, Slabs

# **Design of Structures using MS Excel**

02 Hours

Creating Design spreadsheet for Columns, Footings, and Staircases

# Course Outcomes: At the end of the course student will be able to

1.	<b>Explain</b> the types of analysis, structural analysis methods and procedure (L2)
2.	Create 2D and 3D Models for analysis with various end conditions. (L3)
3.	Plan a column orientation for different types of buildings (L5)
4.	Analyse 3D frames, Buildings, Retaining wall, and Bridges. (L5)
5.	<b>Design</b> the analysed structures using MS Excel. (L6)

TECHNICAL WRITING SKILLS												
Course Code:	CV2656-1	Course Type	AEC									
Teaching Hours/Week (L:T:P: S)	2:0:0:0	Credits	02									
Total Teaching Hours	25	CIE + SEE Marks	50+50									

#### **Course Objectives:**

1.	Understand the information design and development in technical writings.														
2.	Acquire the knowledge of grammar and editing in technical writing.														
3.	Comprehend the details of self-development and assessment in technical writing.														
4.	Acquire the fundamental knowledge and importance of communication in technical														
	writings.														
5.	Gain the basic knowledge on ethics and report writing aspect of technical														
	communication.														

#### **UNIT-I**

#### **Information Design and Development**

05 Hours

Different kinds of technical documents, Information development life cycle, Organization structures, factors affecting information and document design, Strategies for organization, Information design and writing for print and for online media.

#### **Technical Writing, Grammar and Editing**

05 Hours

Technical writing process, forms of discourse, Writing drafts and revising, Collaborative writing, creating indexes, technical writing style and language. Basics of grammar, study of advanced grammar, editing strategies to achieve appropriate technical style. Introduction to advanced technical communication, Usability, Hunan factors, Managing technical communication projects, time estimation, Single sourcing, Localization.

#### UNIT-II

#### **Self Development and Assessment**

05 Hours

Self assessment, Awareness, Perception and Attitudes, Values and belief, Personal goal setting, career planning, Self-esteem. Managing Time; Personal memory, Rapid reading, Taking notes; Complex problem solving; Creativity

# **Communication and Technical Writing**

05 Hours

Public speaking, Group discussion, Oral; presentation, Interviews, Graphic presentation, Presentation aids, Personality Development. Writing reports, project proposals, brochures, newsletters, technical articles, manuals, official notes, business letters, memos, progress reports, minutes of meetings, event report.

#### **UNIT-III**

Ethics 03 Hours

Business ethics, Etiquettes in social and office settings, Email etiquettes, Telephone Etiquettes, Engineering ethics, Managing time, Role and responsibility of engineer, Work culture in jobs, Personal memory, Rapid reading, Taking notes, Complex problem solving, Creativity.

# **Interpretation and Report Writing**

02 Hours

Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.

<b>Course Outcomes:</b>	At the end of t	the course stud	ent will be able to
Course Outcomes.	AL HIE EHO OF	ille course stud	ent will be able to

1.	<b>Explain</b> the information design and development in technical writings.
2.	<b>Illustrate</b> the knowledge of grammar and editing in technical writing.

**3. Comprehend** the details of self-development and assessment in technical writing.

**4. Elucidate** the fundamental knowledge and importance of communication in technical writings.

**5. Describe** the ethics and report writing aspect of technical communication.

VISUAL BASIC APPLICATION FOR EXCEL												
Course Code: CV2657-1 Course Type AEC												
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02									
<b>Total Teaching Hours</b>	25	CIE + SEE Marks	50+50									

#### **Course Objectives:**

	1.	To study the basics of excel and macros.							
	2.	To study the operators decisions and loops used in excel vba.							
Ī	3.	To study about the strings, arrays, user defined functions in excel.							
Ī	4.	To study the sub procedures, events and excel objects.							
	5.	To study the text files, programming charts and user forms.							

#### **UNIT-I**

Overview 05 Hours

VBA, Excel Macros, Excel Terms, Macro comments, Message box, Input box, Variables – data types, Constants

### **Operators; Decisions; Loops**

05 Hours

Operators - Arithmetic operators, comparison operators, logical operators, concatenation operators Decision – If Statement; If else statement; If elseif-Else statement; Nested If statement; Switch statements

Loops – For Loop; For each loops; while wend loops; Do while loop; Do until loop; Loop control statements; Exit for; Exit Do.

#### **UNIT-II**

# **Strings**; Arrays; User defined functions

05 Hours

Strings – Instr; Instring Reverse; LCase; UCase; Left; Right; Mid; Ltrim; Rtrim; Trim; Len; Replace; Space; StrComp; String Function; String Reverse Function.

Arrays – Array declaration, Assigning values to an array, Multi dimensional array, ReDim statement, Array methods, LBound function, Ubound function, split function, join function, filter function, IsArray function, Erase function

User defined functions – Function definition, Calling a function

#### **Sub procedure; Events**

03 Hours

Calling procedures; Events - Worksheet events; workbook events

Error Handling – Syntax errors; Runtime errors; Logical errors; Err object

# Excel Objects

02 Hours

Excel Objects – Application objects; workbook objects; worksheets objects; Range objects

#### **UNIT-III**

Text files 05 Hours

Text files – File system object (FSO); write command

**Programing charts** 

User forms

Course Outcomes: At the end of the course student will be able to

- **1. Summarize** the basics of excel and macros. (L2)
- **2. Make use of** the operators, decisions and loops used in excel vba. (L3)
- **3. Utilize** the strings, arrays, user defined functions in excel. (L3)

- **4. Apply** the sub procedures, events and excel objects. (L3)
- **5. Develop** the text files, programming charts and user forms. (L3)

# ENTREPRENEURSHIP DEVELOPMENT AND SMALL BUSINESS MANAGEMENT

	IVIANAGEIVIEN											
Course Code:	CV2658-1	Course Type	AEC									
Teaching Hours/Week (L:T:P: S)	2:0:0:0	Credits	02									
<b>Total Teaching Hours</b>	25	CIE + SEE Marks	50+50									

#### **Teaching Department: Civil Engineering**

# **Course Objectives:**

1.	Understand the information design and development in technical writings.													
2.	Acquire the knowledge of grammar and editing in technical writing.													
3.	Comprehend the details of self-development and assessment in technical writing.													
4.	Acquire the fundamental knowledge and importance of communication in technical													
	writings.													
5.	Gain the basic knowledge on ethics and report writing aspect of technical													
	communication.													

#### **UNIT-I**

#### **ENTREPRENEURSHIP**

05 Hours

Introduction, Meaning and Importance, Evolution of term 'Entrepreneurship', Factors influencing entrepreneurship', Psychological factors, Social factors, Economic factor, Environmental factors, Characteristics of an entrepreneur, Entrepreneur and Entrepreneur.

Types of entrepreneur, According to Type of Business, According to Use of Technology, According to Motivation, According to Growth, According to Stages

New generations of entrepreneurship viz. social entrepreneurship, Entrepreneurship, Health entrepreneurship, Tourism entrepreneurship, Women entrepreneurship etc, Barriers to entrepreneurship

# **Foundation of Entrepreneurship Development**

05 Hours

Concept and need of entrepreneurship; Characteristics and Types of Entrepreneurship; Entrepreneurship as a career; Entrepreneurship as a style of Management; The changing role of the entrepreneur; Entrepreneurial traits, factors affecting entrepreneurs.

#### **UNIT-II**

# **Theories of Entrepreneurship**

05 Hours

Influences on entrepreneurship development; External influences on entrepreneurship development; Socio-cultural, Political, economical, personal entrepreneurial success and failure: reasons and remedies; Women entrepreneurs: Challenges and achievements of women entrepreneurs.

# **Business Planning Process**

05 Hours

The business plan as an entrepreneurial tool; Elements of business planning; Objectives; Market analysis; development of Product/idea; Marketing, Finance, Organization and management; Ownership; Critical risk contingencies of The proposal; Scheduling and milestones.

#### UNIT-III

# **Project Planning for Entrepreneurs**

03 Hours

Technical, Financial, Marketing, Personnel, and management feasibility reports; Financial schemes offered by various financial institutions, Like Commercial Banks, IDBI, ICICI, SIDBI, SFCs, Foreign currency Financing; Estimation of Financial requirements.

# **Entrepreneurship Development and Government**

02 Hours

Role of Central Government and State Government in promoting entrepreneurship with various incentives, subsidies, grants, programs, schemes and challenges. Government initiatives and inclusive entrepreneurial Growth.

#### **Course Outcomes:** At the end of the course student will be able to

- Explain the information design and development in technical writings.
   Illustrate the knowledge of grammar and editing in technical writing.
   Comprehend the details of self-development and assessment in technical writing.
   Elucidate the fundamental knowledge and importance of communication in technical writings.
- **5. Describe** the ethics and report writing aspect of technical communication.

INNOVATION AND DESIGN THINKING							
Course Code	ME1654-1	Course Type	AEC				
Teaching Hours/Week (L: T: P: S)	0:0:2:0	Credits	01				
Total Teaching Hours	15	CIE + SEE Marks	50+50				

#### **Teaching Department: Mechanical Engineering**

#### **Course Objectives:**

1		To explain the concept of design thinking for product and service development
2		To explain the fundamental concept of innovation and design thinking
3	3.	To discuss the methods of implementing design thinking in the real world.

#### **Note: Teaching-Learning Process (General Instructions)**

These are sample Strategies; which teachers can use to accelerate the attainment of the various course

outcomes.

- 1. Lecturer method (L) does not mean only the traditional lecture method, but a ifferent type of teaching method may be adopted to develop the outcomes.
- 2. Show Video/animation films to explain concepts
- 3. Encourage collaborative (Group Learning) Learning in the class
- 4. Ask at least three HOTS (Higher-order Thinking) questions in the class, which promotes critical thinking
- 5. Adopt Problem Based Learning (PBL), which fosters students' Analytical skills, develops thinking skills such as the ability to evaluate, generalize, and analyze information rather than simply recall it.
- 6. Topics will be introduced in multiple representations.
- 7. Show the different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them.
- 8. Discuss how every concept can be applied to the real world and when that's possible, it helps improve the students' understanding.

#### **List of Modules**

#### 1. PROCESS OF DESIGN

Understanding Design thinking

Shared model in team-based design – Theory and practice in Design thinking – Explore the presentation

Tools for Design Thinking

Real-Time design interaction capture and analysis – Empathy for design

**Teaching-Learning Process** 

Introduction about the design thinking: Chalk and Talk method

Theory and practice through presentation

Case studies on design thinking for real-time interaction and analysis

#### 2. Design Thinking in IT

Design Thinking to Business Process modeling – Scenario-based Prototyping DT For strategic innovations

Growth – Storytelling representation – Strategic Foresight - Change – Sense Making – Maintenance - Relevance – Value redefinition - Extreme Competition – experience design - Standardization – Humanization - Creative Culture – Rapid prototyping, Strategy and Organization – Business Model design.

**Teaching-Learning Process** 

	Case studies on design thinking and business acceptance of the design				
	Business model examples of successful designs				
3.	Design thinking workshop				
	Design Thinking Workshop Empathize, Design, Ideate, Prototype and Test				
	Teaching-Learning Process				
	Presentation by the students on the success of Live project on design thinking in a group of				
	4 students				

#### **Course Outcomes:** Upon the successful completion of the course, students will be able to:

1.	Appreciate various design process procedure
2.	Generate and develop design ideas through a different techniques
3.	Identify the significance of Design Thinking to Understand products

RESEARCH METHODOLOGY						
Course Code	ME1659-1	Course Type	AEC			
Teaching Hours/Week (L: T: P: S)	2:0:0:0	Credits	02			
Total Teaching Hours	25	CIE + SEE Marks	50+50			

#### **Teaching Department: Mechanical Engineering**

#### **Course Objectives:**

1.	Explain the importance of research methodology, Explain the steps in defining the research
	problem.
2.	Explain methods of reviewing the literature and research design.
3.	Discuss the methods of designing sampling survey. Discuss methods of scaling and
	measuring of the data.

- **4.** Perform Hypothesis testing using the concept of mean and variance.
- **5.** Discuss interpretation and report writing techniques.

UNIT-I 10 hours

Research Methodology: Introduction, Meaning of Research, Objectives of Research, Types of Research, Research Approaches, Significance of Research, Research and Scientific Method, Research Process

Defining the Research Problem: Research Problem, Selecting the Problem

Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to research problem

Research Design: Meaning of Research Design, Need for Research Design, Features of Good

UNIT-II 10 hours

Design of Sample Surveys: Design of Sampling: Introduction, Sample Design, Sampling and Non-sampling Errors,

Data Collection: Introduction, Experimental and Surveys, Collection of Primary Data, Collection of Secondary, Data, Selection of Appropriate Method for Data Collection, Case Study Method.

Testing of Hypotheses: Hypothesis, Basic Concepts Concerning Testing of Hypotheses

UNIT-III 5 hours

Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.

#### Course Outcomes: At the end of the course student will be able to

- Explain the importance of research methodology, Explain the steps in defining the research problem.
   Explain methods of reviewing the literature and research design.
- **3.** Discuss the methods of designing sampling survey.
- **4.** Perform Hypothesis testing using the concept of mean and variance
- **5.** Discuss interpretation and report writing techniques.

Teaching Hours/Week (L: T: P: S): 3:0:0:0 Credits:					
Course Code:	BT1501-1	Course Type:	OEC		
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	03		
Total Teaching Hours:	40	CIE + SEE Marks:	50+50		

#### **Teaching Department: Biotechnology**

#### **Course Objectives:**

- To learn the fundamental concepts of biofuels, types of biofuels, their production technologies.
- 2. To learn the concepts of feedstock utilization and energy conversion technologies.

#### **UNIT-I**

#### Liquid Biofuels 15 Hours

Description and classification of Biofuels; Primary biomass: Plant Materials-Woody biomass, Lignocellulosic and agroindustrial by-products, starchy and sugary crops. Secondary biomass: Waste residues and co-products- wood residues, animal waste, municipal solid waste. Biomass production for fuel – algal cultures, yeasts (Lipid and carbohydrate).

Production of biodiesel: Sources of Oils – edible and non-edible; Esterification and Transesterification. Free fatty acids; saponification; Single step and two step biodiesel production. Catalysts for biodiesel production – homogeneous (alkali/acidic) and heterogeneous; Lipase mediated process. General procedure of biodiesel production and purification Quality Control Aspects: GC analysis of biodiesel, fuel property measurements, ASTM (D-6751) and Indian standards (IS15607). Algal Biodiesel production.

Production of Bioethanol: Bioethanol production using Sugar; Starch and Lignocellulosic feedstocks; Pretreatment of lignocellulosic feed stock

#### UNIT-II

## **Biohydrogen and Microbial Fuel Cells**

15 Hours

Enzymes involved in H2 Production; Photobiological H2 Production: Biophotolysis and Photo fermentation; H2 Production by Fermentation: Biochemical Pathway, Batch Fermentation, Factors affecting H2 production, Carbon sources, Detection and Quantification of H2. Reactors for biohydrogen production.

Microbial Fuel cells: Biochemical Basis; Fuel Cell Design: Anode & Cathode Compartment, Microbial Cultures, Redox Mediators, Exchange Membrane, Power Density; MFC Performance Methods: Substrate & Biomass Measurements, Basic Power Calculations, MFC Performance: Power Density, Single vs Two-Chamber Designs, Wastewater Treatment Effectiveness;

Advances in MFC.

#### **UNIT-III**

## **Recovery of Biological Conversion Products**

10 Hours

Bio gasification of municipal solid waste: Anaerobic processing; Types of digesters, Biogas plant in India. Thermochemical processing: Planning an incineration facility, Incineration technologies: Mass burning system; Refuse derived fuel (RDF) system; modular incineration; Fluidized bed incineration; energy recovery; Fuel production through biomass incineration, Pyrolysis and gasification, hydrothermal processing.

Course Outcomes: At the end of the course student will be able to

**1.** Mark the significance of biofuels and raw materials and Identify suitable feedstock for production of biofuels.

2.	Illustrate the production of liquid biofuels from various feed stocks.
3.	Demonstrate production of biohydrogen using microbial sources.
4.	Extend the concepts of microbial fuel cells towards development of specific application.
5.	Understand and apply the concepts of biochemical processing to harvest energy from waste products/streams.

SOLID WA	ASTE MANA	GEMENT	
Course Code:	BT1502-1	Course Type:	OEC
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	03
Total Teaching Hours:	40	CIE + SEE Marks:	50+50

#### **Teaching Department: Biotechnology**

#### **Course Objectives:**

- 1. To learn types of solid wastes, collection, treatment and disposal methods.
- To understand various processing techniques and regulations of treatment and disposal.

#### **UNIT-I**

#### Introduction to Solid Wastes and its Segregation & Transportation

15 Hours

Solid waste – Definition, Sources of waste, Classification of Solid waste, Characteristics of Solid Waste (Physical, Chemical, Biological), Solid waste problems – impact on environment and health. Concept of waste reduction, recycling and reuse.

Waste collection and segregation: Solid waste generation, Onsite handling and segregation of wastes at source, Collection and storage of municipal solid wastes, Equipment used and manpower required in collection, Collection systems and routes.

Transportation: Transfer stations: types, location, maintenance, Methods and means of transportation.

#### **UNIT-II**

## **Processing Techniques, Recovery of Resources and Waste Disposal**

15 Hours

Processing Techniques: Unit operations for separations and processing, mechanical and thermal volume reduction, Incineration of solid wastes – process and types of incinerators (liquid injection, rotary kiln and fluid bed), Biological processing – composting, vermicomposting, biomethanation, fermentation, Drying and dewatering of wastes.

Recovery of Resources: Heat recovery in incineration process, energy recovery and conversion of products from biological processes.

Dumping of solid wastes, Landfills – Types, site selection, preliminary design, operation, case study, Advantages and disadvantages of landfills, Leachate and landfill gases: Collection and treatment, Landfill disposal for hazardous wastes, biomedical waste.

#### UNIT-III

## **Solid Waste Management Rules and Planning Issues**

10 Hours

Legislative trends and impacts: Major legislations, Government agencies. Municipal Solid Waste Management Act (1999), Hazardous Wastes (Handling and Management) Rules, Biomedical Waste (Handling and Management) Rule (1998), e-Waste (Management and Handling) Rule 2011.

Planning and developing a site for solid waste management, Site Remediation: Assessment and Inspection, Remedial techniques, Siting guidelines.

- Identify the sources, classification and characteristics of solid wastes
   Develop insight into the collection, transfer, and transport of solid waste.
   Apply waste processing techniques and recovery of resources from the waste.
   Select the alternatives of solid waste disposals and its impacts.
- **5.** Acquire knowledge about solid and hazardous waste management legislative rules.

FUNDAMENTALS OF AI AND ML										
Course Code:	CS2501-1	Course Type:	OEC							
Teaching Hours/Week (L: T: P: S):	3:0:0:0	Credits:	03							
Total Teaching Hours:	40+0+0	CIE + SEE Marks:	50							
Prerequisite	IS1001-1									

## **Teaching Department: Computer Science & Engineering**

## **Course Objectives:**

mining tool.

5.

1.	Analyze the most fundamental knowledge to the students so that they can understand what
	the AI is.
2.	Gain a historical perspective of AI and its foundations
3.	Investigate applications of AI techniques in intelligent agents, expert systems, artificial neural
	networks and other machine learning models.
4.	Experience AI development tools such as an 'AI language', expert system shell, and/or data

## Explore the current scope, potential, limitations, and implications of intelligent systems.

Introduction

What is AI? Foundation of AI, Early History of AI, The Middle Ages and Dark Ages of AI, Renaissance, Future of AI. Intelligence of AI; AI An Impossible Task, Animal Intelligence, Brain Size And Performance, Sensing And Movement, Subjective Intelligence, Ig Tests. Comparative Intelligence,

UNIT-I

Chapter No 1: Introduction and Intelligence (Page No 11-37)

#### UNIT-II

#### **Classical Artificial Intelligence**

15 Hours

Introduction, Expert Systems, Conflict Resolution, Multiple Rules, Forward Chaining, Backward Chaining, Problems With Expert Systems, Fuzzy Logic, Fuzzification, Fuzzy Rules, Defuzzification, Fuzzy Expert System, Problem Solving. Chapter No 2: Classical AI (Page No 38-45)

#### **UNIT-III**

#### **Foundations of Machine Learning**

10 Hours

What is machine learning? Applications of Machine learning, Understand Data, Types of machine learning: Supervised, Unsupervised, Reinforcement Learning, Theory of learning: feasibility of learning, error and noise, training versus testing, theory of generalization, bias and variance, learning curve,.

#### Course Outcomes: At the end of the course student will be able to

- Explain the fundamental understanding of the history of artificial intelligence (AI) and its 1. foundation Interpret the basic principles of AI in solutions that require problem solving, inference, 2.
- perception, knowledge representation, and learning.
- 3. Describe the awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models
- 4. Identify and explain the proficiency developing applications in an 'AI language', expert system shell, or data mining tool.
- Explain the fundamental concept and importance of machine learning. 5.

INTRODUCTION TO DATA STRUCTURES										
Course Code: CS2502-1 Course Type: OEC										
Teaching Hours/Week (L:T:P:S):	3:0:0:0	Credits:	03							
Total Teaching Hours:	40+0+0	CIE + SEE Marks:	50							
Prerequisite	CS1001-1	•								

#### **Teaching Department: Computer Science & Engineering**

## **Course Objectives:**

1.	Outline the concepts of data structures, types, operations, structures, pointers
2.	Implement linear data structures stacks, queues and usage of stacks in various applications.
3.	Implement the operations of singly linked lists
4.	Identify and differentiate different types of binary trees and binary search trees data
	structures
5	Illustrate and classify threaded binary trees

#### UNIT-I

Introduction 15 Hours

Data Structure, Classification (Primitive and non-primitive), data structure operations, Arrays, Pointers and structures, Dynamic Memory Allocation Functions,

#### **Linear Data Structures – Stacks**

Introduction and Definition, Representation of stack: Array and structure representation of stacks, Operations on stacks,

## **Applications of Stack**

Conversion of Expressions, Evaluation of expressions, Recursion: Implementation, Simulating Recursion, examples on Recursion.

#### UNIT-II

#### **Linear Data Structures – Queues**

15 Hours

Introduction and Definition Representation of Queue: Array and Structure, representation of Queue, Various queue structures: ordinary queue, circular Queue

#### **Linear Data Structures - Linked Lists**

Definition and concepts singly linked List: Representation of link list in memory, Operations on singly Linked List, Circular Linked List, Doubly Linked List: Representation and Operations, Circular doubly Link list: Representation and Operations.

#### **UNIT-III**

## **Nonlinear Data Structures- Tree Data Structures**

10 Hours

Basic Terminologies, Binary Trees: Properties, Representation of Binary Tree: Linear representation, Linked representation, Operations on Binary Tree: Insertion, traversals. Introduction to Binary Search Tree

- **1.** Acquire the fundamental knowledge of various types of data structures and pointers.
- **2.** Apply the fundamental programming knowledge of data structures to design stack and use them for solving problems.
- **3.** Apply the fundamental programming knowledge of data structures to design queues and use them for solving problems.

- **4.** Design various functions for implementation of linked list.
- **5.** Implement and apply the concept of binary trees and binary search tree data structure.

DISASTER MANAGEMENT									
Course Code:	CV2501-1	Course Type	OEC						
Teaching Hours/Week (L:T:P:S)	3:0:0:0	Credits	03						
Total Teaching Hours	40	CIE + SEE Marks	50+50						
Prerequisite	CV1002-1								

#### **Teaching Department: Civil Engineering**

### **Course Objectives:**

1.	Understand difference between Disaster, Hazard, Vulnerability, and Risk.
2.	Know the Types, Trends, Causes, Consequences and Control of Disasters
3.	Apprehend Disaster Management Cycle and Framework.
4.	Know the Disaster Management in India
5.	Appreciate Applications of Science and Technology for Disaster Management.

#### **UNIT-I**

## **Understanding Disasters**

04 Hours

Understanding the Concepts and definitions of Disaster, Hazard, Vulnerability, Risk, Capacity – Disaster and Development, and disaster management.

#### Types, Trends, Causes, Consequences and Control of Disasters

10 Hours

Geological Disasters (earthquakes, landslides, tsunami, mining); Hydro-Meteorological Disasters (floods, cyclones, lightning, thunder-storms, hail storms, avalanches, droughts, cold and heat waves) Biological Disasters (epidemics, pest attacks, forest fire); Technological Disasters (chemical, industrial, radiological, nuclear) and Manmade Disasters (building collapse, rural and urban fire, road and rail accidents, nuclear, radiological, chemicals and biological disasters) Global Disaster Trends – Emerging Risks of Disasters – Climate Change and Urban Disasters

#### **UNIT-II**

## **Disaster Management Cycle and Framework**

10 Hours

Disaster Management Cycle and Framework: Disaster Management Cycle – Paradigm Shift in Disaster Management Pre-Disaster – Risk Assessment and Analysis, Risk Mapping, zonation and Micro zonation, Prevention and Mitigation of Disasters, Early Warning System; Preparedness, Capacity Development; Awareness During Disaster – Evacuation – Disaster Communication – Search and Rescue – Emergency Operation Centre – Incident Command System – Relief and Rehabilitation – Post-disaster – Damage and Needs Assessment, Restoration of Critical Infrastructure – Early Recovery – Reconstruction and Redevelopment; IDNDR, Yokohama Strategy, Hyogo Framework of Action.

#### **Disaster Management in India**

06 Hours

Disaster Management in India: Disaster Profile of India – Mega Disasters of India and Lessons Learnt, Disaster Management Act 2005 – Institutional and Financial Mechanism National Policy on Disaster Management, National Guidelines and Plans on Disaster Management; Role of Government (local, state and national), Non-Government and Inter-Governmental Agencies.

#### **UNIT-III**

## **Applications of Science and Technology for Disaster Management**

06 Hours

Geo-informatics in Disaster Management (RS, GIS, GPS and RS) Disaster Communication System (Early Warning and Its Dissemination) Land Use Planning and Development Regulations Disaster Safe Designs and Constructions Structural and Non Structural Mitigation of Disasters S&T Institutions for Disaster Management in India

Case Studies 04 Hours

Study of Recent Disasters (at local, state and national level), Preparation of Disaster Risk Management Plan of an Area or Sector, Role of Engineers in Disaster Management

### **Course Outcomes:** At the end of the course student will be able to

1.	Explain Concepts, Types, Trends, Causes of Disasters
2.	Describe Consequences and Control of Disasters
3.	Explain Disaster Management Cycle and Framework
4.	Explain the lesson learnt from the disasters in India and discuss the financial mechanism, roles and responsibilities of Non-Government and Inter-Governmental Agencies for Disaster management
5.	Describe the Applications of Science and Technology recent disasters, role of engineers for Disaster Management and prepare a report of Disaster Risk Management Plan.

ENVIRONMENTAL HYGIENE, SANITATION AND WASTE MANAGEMENT										
Course Code:	CV2502-1	Course Type	OEC							
Teaching Hours/Week (L:T:P:S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite	CV1002-1									

#### **Teaching Department: Civil Engineering**

## **Course Objectives:**

process.

1.	Creation of awareness among student's health issues and Swachh Bharath mission and the
	consequent responsibilities.
2.	To understand the culture cleanliness, engineering applications in creation of ODF (Open
	defecation free) concept, Importance of legal & cultural issues related to Environmental
	Hygiene.
3.	To know the importance of sanitation, gender sensitive sanitation issues & use of
	engineering technology in construction of toilets.
4.	To know the importance of waste management system, wastewater audit and waste water
	treatment process

#### UNIT-I

To study the role of student in Swachh Bharata Abhiyan, solid and waste water treatment

## Prospective: Environmental Hygiene (EH), Sanitation, Solid Waste and Wastewater 06 Hours

Introduction- Swachh Bharath Mission (SBM)-Mission Objectives-Duration- Components Environmental Hygiene-Benefits-Sanitation-Waste Management. Work opportunities in Environmental Hygiene, Sanitation and Waste Management. Participatory Learning for Environmental Hygiene, Sanitation and Waste Management.

## Sociology of environmental hygiene management, solid waste and waste water and impacts

08 Hours

Open Defecation-Habits & attitude towards waste-Goals of SBA. Community Consciousness and Engagement on Sanitation Aspects, Roles & Responsibilities, Job Charts, Frequency, Schedules and Timelines in Swachhata Management, Culture of Cleanliness (Swachh Bharat Abhiyan), Behaviour Change Communication, Role of Habits and Attitudes in Environmental Hygiene Management, Waste and Wastewater Disposal; Change Management.

#### **UNIT-II**

## **Infrastructure for Sanitation**

08 Hours

Containment-Preparation of toilets –Toilet Types Evaluation of Construction and Maintenance of Community, Public, Institutional and Individual Sanitation Infrastructure Toilets-Proportion and Number of toilets, Gender Sensitive Sanitation Facilities, Ramps for Differently Abled, Types – Indian and Western. Faecal Sludge treatment - Single / Twin pit, Eco San, Septic Tank and Formal Sewerage.

#### **Solid Waste Management**

08 Hours

Swachh Survekshan- Solid Waste management- Steps- Waste Audit-Classification Methods of Solid Waste Disposal and Management-Composting-Different types of composting- Waste Minimization-Waste Management.

#### **UNIT-III**

#### **Waste & Wastewater Audit**

06 Hours

**Waste Audit** -Environmental Impact Assessment, Waste Characterization, Quantity Determination, Primary Collection Methods, Secondary Transportation.

**Wastewater Audit**-Water Budget, Types of Wastewater, Survey of Distribution Network and Feasibility of Various Wastewater Treatment Methods.

#### **Swachh Bharath Mission and Inclusivity**

04 Hours

Swacch Bharath Mission in rural & Urban Context-Gender Issues in sanitation. Role of women in Sanitation.

## Course Outcomes: At the end of the course student will be able to

- Creation of awareness among student's health issues and Swachh Bharath mission and the consequent responsibilities.
   To understand the culture cleanliness, engineering applications in creation of ODF (Open
- **2.** To understand the culture cleanliness, engineering applications in creation of ODF (Open defecation free) concept, Importance of legal & cultural issues related to Environmental Hygiene.
- **3.** To know the importance of sanitation, gender sensitive sanitation issues & use of engineering technology in construction of toilets.
- **4.** To know the importance of waste management system, wastewater audit and waste water treatment process.
- **5.** To study the role of student in Swachh Bharata Abhiyan, solid and waste water treatment process.

ENVIRONMENTAL IMPACT ASSESSMENT										
Course Code: CV2503-1 Course Type OEC										
Teaching Hours/Week (L:T:P:S)	3:0:0:0	Credits	03							
Total Teaching Hours	Total Teaching Hours 40 CIE + SEE Marks 50+50									
Prerequisite	CV1002-1	•	<u>.</u>							

## **Teaching Department: Civil Engineering**

### **Course Objectives:**

- Identify the need to assess and evaluate the impact of projects on environment.
   Explain major principles of environmental impact assessment.
   Understand the different steps within environmental impact assessment.
- **4.** Appreciate the importance of EIA for sustainable development and a healthy environment.

#### UNIT-I

Evolution of EIA 16 Hours

Concepts of EIA, EIA methodologies (Adhoc, Network Analysis, Checklists, Map overlays, Matrix method), Screening and scoping, Rapid EIA and Comprehensive EIA, General Framework for Environmental Impact Assessment, EIA Specialized areas like environmental health impact assessment, Environmental risk analysis.

#### **UNIT-II**

14 Hours

Baseline data study, Prediction, and assessment of impacts on physical, biological, and socio-economic environment, Legislative and environmental clearance procedures in India, Public participation, Resettlement, and rehabilitation.

#### **UNIT-III**

10 Hours

Fault free analysis, Consequence Analysis, Introduction to Environmental Management Systems, Environmental management plan-Post project monitoring Environmental Audit: Cost Benefit Analysis, Life cycle Assessment. Case studies on project, regional and sectoral EIA.

#### **Course Outcomes:** At the end of the course student will be able to

- 1. Understand phenomena of impacts and know the impact quantification of various projects in the environment.
  - **2.** Liaise with and list the importance of stakeholders in the EIA process.
- **3.** Know the role of public in EIA studies.
- **4.** Overview and assess risks posing threats to the environment.
- **5.** Assess different case studies/examples of EIA in practice.

INTRODUCTION TO GEOINFORMATICS							
Course Code:	CV2504-1	Course Type	OEC				
Teaching Hours/Week (L:T: P:S)	3:0:0:0	Credits	03				
Total Teaching Hours	40	CIE + SEE Marks	50+50				
Prerequisite	CV1001-1, CV1002-1						

#### **Teaching Department: Civil Engineering**

### **Course Objectives:**

1.	Explain	the	basic	principles	of	Geoinformatics	comprising	Remote	sensing,
	Photogr	amme	try, GPS	, GNSS & GI	S.				
2	Evolain t	ha cta	aps and	techniques	of nh	notogrammetry	aerial photo int	ernretation	vicual &

- **2.** Explain the stages and techniques of photogrammetry, aerial photo interpretation, visual & digital image processing, enhancement and interpretation.
- **3.** Explain and Appraise GIS its components, data structures, process and operation, Map and its projections, components, preparation and overlays
- **4.** Explain the GIS functionality and Appraise the significance of GEOINFORMATICS (Photogrammetry, RS, GPS, GNSS & GIS) in real world applications.

#### **UNIT-I**

16 Hours

**Remote sensing and its Principles**: Physics of remote sensing, EM spectrum, Blackbody concept, atmospheric windows, spectral response of common earth features.

**Platforms & Sensors**: Ground based, Air borne and Space borne platforms, Active and Passive Sensors, Photographic sensors, scanners, radiometers, RADAR and thermal infrared, hyper spectral remote sensing, Indian satellites and sensors: capabilities, data products

**Photogrammetry**: Basic principles of Aerial photography and Photogrammetry, Flight procedures, Aerial Photo Interpretation and Analysis techniques.

**Satellite Image Interpretation and Analysis techniques**: Visual & Digital Image interpretation, Interpretation elements, False Colour Composites (FCC).

#### **UNIT-II**

15 Hours

**Digital Image Processing and Analysis**: Digital image formats, pre-processing and processing (DIP), image restoration/enhancement procedures, information extraction, pattern recognition concepts, post processing procedures.

**Geographic Information System -concept and spatial models**: Fundamentals of GIS, spatial and non-spatial data, vector and raster GIS, GIS Hardware and software, georeferencing, digitization, thematic maps, Overlay Analysis, Operation of GIS, Co-ordinate systems and map projections, Map scale, data display and cartography.

## **UNIT-III**

09 Hours

**Geoinformatics and Virtual GIS**: Modern Surveying and Geoinformatics, GPS & GNSS, GIS Functionality: Introduction, data acquisition, preliminary data processing, data storage and retrieval, spatial search and analysis, graphics and interaction, Virtual GIS and Real world applications.

- **1.** Define and explain the principles of Remote Sensing and list various types of platforms, sensors & resolutions in RS with a special reference to Indian satellites and data products.
- **2.** Explain Photogrammetry, its basic principles, elements of photo interpretation, Visual & Digital Image interpretation techniques

- **3.** Explain different stages involved in Digital Image Processing, various image enhancement techniques, list and classify the digital image formats and the extracted information for various purposes.
- **4.** Explain and Appraise GIS its components, data structures, process and operation, Map and its projections, components, preparation and Overlays.
- **5.** Explain the GIS functionality and appraise the significance of GEOINFORMATICS (Photogrammetry, RS, GPS, GNSS & GIS) and Virtual GIS in real world applications.

Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03				
Total Teaching Hours	40	CIE + SEE Marks	50+50				
Prerequisite	CY1001-1	-					

#### **Teaching Department: Chemistry**

## **Course Objectives:**

- **1.** To provide fundamental understanding aspects of electrochemistry and material science related to corrosion. To understand the types of corrosion attacking on the metal and its preventions.
- 2. To impart knowledge on corrosion science and its applications to the engineering materials.
- **3.** To identify practice for the prevention and remediation of the corrosion. To provide methodologies for measuring the corrosion performance of materials.

#### **UNIT-I**

#### **Fundamentals of Corrosion**

09 Hours

Definition, cost of corrosion, Corrosion Damage and consequences, Classification of corrosion, Electrochemical Aspects of corrosion, Electrochemical reactions, Different Environmental aspects, polarization and passivity, Corrosion Rate Expression, Determination. Standard electrode potential, EMF and Galvanic series, Potential-pH (Roubaix Diagram).

Forms of Corrosion 08 Hours

Galvanic corrosion, Crevices corrosion, Filiform corrosion, Pitting corrosion, Uniform corrosion and Atmospheric corrosion, Inter granular corrosion, Selective leaching, Erosion corrosion, Cavitation damage, Stress corrosion, Impingement attack, Inlet tube corrosion, Corrosion fatigue, Hydrogen blistering, Hydrogen embrittlement.

#### **UNIT-II**

## **Corrosion at Elevated Temperature**

08 Hours

High temperature materials, Metal oxides, Pilling bed worth rule, oxide defect structure, Hot corrosion, Corrosion of mineral acids-corrosion of steel, stainless steel, Cu and Al.

Corrosion Testing

07 Hours

Weight loss method, Tafel extrapolation test, linear polarization test and AC impedance method.

#### **UNIT-III**

#### **Corrosion Prevention Methods**

08 Hours

Materials Selections, Design, Change of the environments: Atmospheric corrosion, Control of atmospheric corrosion, Changing medium, Inhibitors, Cathodic and Anodic protection, Protective coatings.

- **1.** Explain the fundamentals of difference in electrode potential across an interface in particular a metal/ electrolyte and the relationship between rates of electrochemical reactions and the potential drop across interfaces.
- 2. Analyze the causes and mechanisms of various types of corrosion including uniform, galvanic, crevice, pitting, inter granular and various modes of environmentally cracking. Acquire knowledge of influence of a materials composition, the effect of

an electrolytes composition on the corrosion of metals and microstructure on its corrosion performance.

Identify the materials that will exhibit adequate corrosion resistance in a particular environment and remedial action that will reduce corrosion to a acceptable level. Explain the concepts of different measuring techniques of corrosion.

Total Teaching Hours	40	CIE + SEE Marks	50+50				
Prerequisite	CY1001-1						

## **Teaching Department: Chemistry**

### **Course Objectives:**

- **1.** Identify the structure of terpenoids and their biosynthesis. Elucidate the structure of β-carotene, haemoglobin and chlorophyll.
- 2. Understand the chemistry underlying steroids and sex hormones. Get introduced to the different types of prostaglandins as well as theory and chemistry behind natural dyes.
- **3.** Gain knowledge on general methods of structural determination of some of the important alkaloids.

#### **UNIT-I**

#### **Terpenoids & Carotenoids**

08 Hours

Introduction and classification, isoprene rules, general methods of determination of structure of terpenoids. Structure elucidation of the following terpenoids-geraniol,  $\alpha$ -pinine, camphene and farnesol. Biosynthesis of terpenoids.

Introduction and classification of carotenes. Structural elucidation of β-carotene.

**Porphyrins** 

07 Hours

Introduction to porphyrins, structure and degradation products of haemoglobin and chlorophyll.

#### UNIT-II

Steroids 08 Hours

Introduction, Dile's hydrogenation. Chemistry of cholesterol, Blanc's rule, Barbier-Wielman degradation, Oppenuer oxidation. Constitution of bile acids.

Sex hormones: Chemistry of oestrone, progesterone, androsterone and testosterone.

## **Prostaglandins & Natural Dyes**

08 Hours

Introduction, nomenclature, classification, and biological role of prostagladins. Structure elucidation of PGE<sub>1</sub>, Biosynthesis of PGE<sub>2</sub> and PGF<sub>2 $\alpha$ </sub>.

Introduction, Witt's theory of colour, methods of dyeing, chemical constitution of alizarin.

#### **UNIT-III**

Alkaloids 09 Hours

Definition, Classification and isolation of alkaloids. General methods of structural determination of alkaloids. Detailed study of structure elucidation of the following alkaloids- papaverine, cinchonine and nicotine.

#### **Course Outcomes:** At the end of the course student will be able to

1	Elucidate the structure of terpenoids like geraniol, a-pinine, camphene and farnesol.
	Explain the structural chemistry of carotenoids and porphyrins.
2	State the basic reactions governing steroids and sex hormones. Explain the biological role
	and structure of prostaglandins and state the methods employed for dyeing.
3	Apply the general methods of structural determination to elucidate the structure of
	alkaloids like papaverine, cinchonine and nicotine.

#### **Teaching Department: Electronics & Communication Engineering**

#### **Course Objectives:**

1.	To learn basic building blocks of ANNs and its terminology
2.	To understand the working of McCulloch-Pitts Neuron and different types of learning rules
3.	To understand decision regions, discriminant functions and training concept
4.	To understand the working of perceptron as classifier
5.	To understand the mathematics behind different types of single layer feedback networks

#### **UNIT-I**

#### **Introduction to Artificial Neural networks**

16 Hours

Introduction, Basic building blocks: network architecture, setting the weights, activation functions, ANN terminologies: weights, activation functions, bias, threshold, McCulloch-Pitts Neuron Model, Learning Rules

#### UNIT-II

#### **Single Layer Perceptron Classifiers**

15 Hours

Classification Model, Features, and Decision Regions, Discriminant Functions, Linear Machine and Minimum Distance Classification, Nonparametric Training Concept, Training and Classification Using the Discrete Perceptron: Algorithm and Example, Single-Layer Continuous Perceptron Networks for Linearly Separable Classifications, Multicategory Single-Layer Perceptron Networks

#### **UNIT-III**

#### **Single-Layer Feedback Networks**

09 Hours

Basic Concepts of Dynamical Systems, Mathematical Foundations of Discrete-Time Hopfield Networks, Mathematical Foundations of Gradient-Type Hopfield Networks. Transient Response of Continuous-Time Networks, Relaxation Modeling in Single-Layer Feedback Networks

#### **Course Outcomes:** At the end of the course student will be able to

1.	Describe the building blocks of artificial neural and terminologies
2.	Describe the working of neural network and learning rules
3.	Describe training of Single layer perceptron and classification using it.
4.	Explain use of Single layer perceptron for linearly separable and multicategory problems
5.	Explain the mathematics behind different single-layer feedback networks

INTRODUCTION TO MATLAB PROGRAMMING: A HANDS-ON APPROACH										
Course Code:	EC1502-1	Course Type	OEC							
Teaching Hours/Week (L: T: P: S)	2:0:2:0	Credits	03							
Total Teaching Hours	27+0+26+0	CIE + SEE Marks	50+50							

## Teaching Department: Electronics & Communication Engineering Offered to Civil & BT

<b>Course Objective</b>	es:
-------------------------	-----

1.	To demonstrate basic understanding of MATLAB programming
2.	To use and write functions
3.	To use MATLAB programming for image processing

Unit-I 27 Hours

**Introduction to MATLAB:** Starting MATLAB and familiarization with its user interface, syntax and semantics, ways in which MATLAB provides help, create plots in MATLAB.

Matrices and Operators: defining matrices, manipulation of matrices, extract parts of them and combine them to form new matrices, use of operators to add, subtract, multiply, and divide matrices, and we will learn that there are several different types of multiplication and division.

**Functions:** creating reusable functions, how the environment inside a function is separated from the outside via a well-defined interface through which it communicates with that outside world, define a function to allow input to it when it initiates its execution.

**Programmer's Toolbox:** polymorphism and how MATLAB exploits it to change a function's behavior on the basis of the number and type of its inputs, random number generator, how to get input from the keyboard, how to print to the Command Window, and how to plot graphs in a Figure window, how to find programming errors with the help of the debugger, how to print to the Command Window, and how to plot graphs in a Figure window, how to find programming errors with the help of the debugger.

**Selection Statement and Loops:** how to use the if-statement, how to use relational operators and logical operators, how to write polymorphic functions and how to make functions resistant to error, the for-loop and the while-loop, how the break-statement works, nested loops, logical indexing and implicit loops.

**Data Types:** character arrays and how the characters in them are encoded as numbers, string and datetime datatype, how to produce heterogeneous collections of data via structs and cells.

File Input/Output: reading and writing files, how to create, read from, and write into MAT-files, Excel files, text files, and binary files, how to navigate among folders with MATLAB commands.

Image Processing using MATLAB: pre-processing – conversion of color image to gray scale image, decomposition of color images to single color component image, histogram of image, thresholding

decomposition of color images to single color component image, mistogram of image, timesholding								
	List of Experiments							
1	Starting MATLAB and familiarization with its user interface, syntax and semantics, ways							
	in which MATLAB provides help, create plots in MATLAB.							
2	Defining matrices, manipulation of matrices, extract parts of them and combine them							
	to form new matrices, use of operators to add, subtract, multiply, and divide matrices,							
	and we will learn that there are several different types of multiplication and division.							
3	creating reusable functions, how the environment inside a function is separated from							
	the outside via a well-defined interface through which it communicates with that							
	outside world, define a function to allow input to it when it initiates its execution.							
4	Polymorphism and how MATLAB exploits it to change a function's behavior on the basis							
	of the number and type of its inputs, random number generator, how to get input from							
	the keyboard, how to print to the Command Window							
5	How to plot graphs in a Figure window, how to find programming errors with the help							
	of the debugger, how to print to the Command Window, and how to plot graphs in a							
	Figure window, how to find programming errors with the help of the debugger.							

6	How to use the if-statement, how to use relational operators and logical operators, how								
	to write polymorphic functions and how to make functions resistant to error.								
7	The for-loop and the while-loop, how the break-statement works, nested loops, logical								
	indexing and implicit loops.								
8	Character arrays and how the characters in them are encoded as numbers, string and								
	datetime datatype, how to produce heterogeneous collections of data via structs and								
	cells.								
9	Reading and writing files, how to create, read from, and write into MAT-files, Excel files,								
	text files, and binary files, how to navigate among folders with MATLAB commands.								
10	Reading an image, saving, basic manipulation of images, arithmetic operations								
11	Pre-processing – conversion of color image to gray scale image, decomposition of color								
	images to single color component image.								
12	Histogram processing.								
13	Thresholding operation.								

#### **Course Outcomes:** At the end of the course student will be able to

1.	Use matrices and operators in MATLAB programming
2.	Use and write functions; use MATLAB toolbox
3.	Use toolbox and selection statement in MATLAB programming
4.	Write MATLAB programs using loops and summarize data types
5.	Summarize file input/output methods using MATLAB commands and apply pre-processing
	and thresholding operations on images

	ROBOTICS		
Course Code:	EC1503-1	Course Type	OEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50

#### **Teaching Department: Electronics & Communication Engineering**

## **Course Objectives:**

Understand Anatomy of a robot.
 Analyse the robot motion using translation and rotational matrix.
 Discuss Robot trajectory planning and robot control.
 Categorise the various sensors used in robotics

## **5.** Understand the robot programming.

Introduction 16 Hours

Definition, anatomy of robot, classification configurations, robot links and joints, robot specifications, resolution accuracy and repeatability, simple numerical problems, robot drive systems, hydraulic, pneumatic and electric drive systems, wrist and its motions, end effectors, types of end effectors, mechanical & Non-mechanical grippers, methods of constraining parts in grippers.

**UNIT-I** 

## **Motion analysis**

Direct kinematics and inverse kinematics, 3D homogeneous transformations, rotation, translation and displacement matrix, composite rotation matrix, rotation matrix about an arbitrary axis.

#### UNIT-II

#### **Control and trajectory planning**

15 Hours

Trajectory planning, definition, steps in trajectory planning, joint space techniques, use of a p-degree polynomial as interpolation function, cubic polynomial trajectories, linear function with parabolic blends, joint space verses, simple numerical problems on joint space trajectory planning.

#### Sensors

Classification, Types- Contact & Non-Contact sensors.

#### **Machine Vision**

Machine vision, functions of machine vision system, sensing and digitizing, imaging devices, analog to digital signal conversion, quantization and encoding, simple numerical problems, image storage, image processing and analysis, image data reduction, segmentation, feature extraction, object recognition, robotic machine vision applications, inspection, identification, visual surveying and navigation.

#### UNIT-III

Programming 09 Hours

Introduction to robot programming, robot cell layout, work cell control and interlocks, manual programming, lead through and walkthrough programming, off-line programming, robot programming languages, examples

- **1.** Explain the working principle, various performance parameters of robots and identify the types of robots employed in industry.
- 2. Discuss the concept of direct and inverse kinematics. Determine the position and orientation of End-Effector subjected to transformations. Demonstrate the applications of Denavit-Hartenberg (DH) method for different robot configurations.

- **3.** Determine the technique of trajectory planning, control schemes for robot joints and understand the types of the sensors used in robotics.
  - **4.** Apply engineering knowledge in robot visual surveying and navigation.
  - **5.** Analyze and formulate different types of robot cell layouts and use modern tools to write robot programs for different tasks.

CONSUMER ELECTRONICS						
Course Code:	EC2501-1	Course Type	OEC			
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03			
<b>Total Teaching Hours</b>	40+0+0+0	CIE + SEE Marks	50+50			
Prerequisite	EC1001-1					

#### **Teaching Department: Electronics & Communication Engineering**

#### **Course Objectives:**

1.	To provide basic knowledge on sound and transducers
2.	To provide basic knowledge on different display units and camera
3.	To understand the recording process and storage mechanism
4.	To provide basic knowledge on communication and broadcasting
5.	To understand the working of various electronic gadgets

#### UNIT-I

Sound & Vision 15 Hours

Sound: Definition and properties of sound, Transducers: Micro Phone – characteristics and types, and Loud Speakers – characteristics and types, Enclosures and baffles, mono-stereo, audio amplifiers-characteristics, Synthesizers.

Vision: Displays-LED, LCD, PLASMA, Camera: basic principle, CCTV Camera.

#### UNIT-II

## Recording, Playback, Communication & Broadcasting Systems

15 Hours

Recording and Playback: Audio recording methods-magnetic recording, optical recording, digital recording, erasing methods, optical discs- recording and playback, Film projector, Theatre Sound, HiFi system. Communications And Broadcasting: Modulation: AM, FM PCM, Radio transmitters, Radio receivers - Tuned radio frequency receiver and Superheterodyne receiver. Fiber optics, Radio and TV broadcasting. Cellular communication: digital cellular phone, establishing a call.

## UNIT-III

#### **Other Electronic Systems**

10 Hours

Fax machine, Xerox machine, electronic Calculator, Microwave ovens, Washing Machines, A/C and refrigeration, ATM, Auto Electronics, Industrial Electronics and Robotics, Electronics in health / Medicine.

#### **Course Outcomes:** At the end of the course student will be able to

1.	Recall basics of sound and transducers.
2.	Understand the working principles of display units and CCTV camera.
3.	Explain basic working of Recording, storage devices
4.	Explain basics of communication and broadcasting
5.	Recall basic working of commonly used electronic gadgets

## **Teaching Department: Electronics & Communication Engineering**

#### **Course Objectives:**

- **1.** To enable students to gain knowledge of Schematic Design techniques & PCB design techniques
- 2. To expose students to complete PCB Design & manufacturing process

#### Unit-I

Circuit Schematic 05 Hours

Introduction to Kicad schematic design tool, features, node connections, labeling, creating new component.

#### **Unit-II**

PCB Layout: 05 Hours

Introduction to Kicad layout editor, features, layer selections, manual and auto routing in Kicad, verification of footprint, creating footprint for a given component.

#### **Unit-III**

PCB Fabrication 05 Hours

Generating and verifying the PCB Gerber file, preparing artwork for a single side PCB fabrication, preparing PCB artwork for double side PCB, Etching process, tin plating, legend printing, green masking and through hole plating

	List of Experiments
1	Exploring the Kicad Schematic and layout tool
2	Developing a schematic circuit for microphone preamplifier
3	Designing a single side PCB layout for microphone preamplifier
4	Developing a schematic circuit for a microcontroller development board
5	Designing a double side PCB layout for a microcontroller development board
6	Choosing a new sensor/display module and building a schematic circuit for the user level application
7	Building a layout using single or double side PCB for the sensor/display module
8	Preparing the film for the bottom copper, solder mask and top silk (legend) to fabricate a single side PCB using chemical process
9	Preparing the film for the top copper, bottom copper, top solder mask, bottom solder mask and legend to fabricate double side PCB using chemical process
10	PCB routing, etching, cutting and drilling using CNC machine

1.	Draw schematic circuit and create PCB layout for single or multilayer PCB
2.	Fabricate single and double-layer PCB

SPACE TECHNOLOGY AND APPLICATIONS								
Course Code:	EC2503-1	Course Type	OEC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50					
Prerequisite	EC1001-1							

#### **Teaching Department: Electronics & Communication Engineering**

#### **Course Objectives:**

1.	Understand the general laws governing satellite orbits and its parameters.					
2.	Discuss effect of space environment on satellite signal propagation.					
3.	Illustrate various segments employed in satellite and ground station.					
4.	Calculate the uplink / downlink subsystem characteristics.					
5.	know the effects on the EM waves in propagation through space.					
6.	Explain the satellite launch in the space and their applications in remote sensing.					
7.	Discuss the different communication systems used for satellite access.					
8.	Summarise Advanced space systems for mobile communication, VSAT, GPS.					

## UNIT-I

#### **Satellite Technology**

15 Hours

**Satellite communications:** Introduction, Kepler's laws, definitions, orbital element, apogee and perigee heights, orbit perturbations, inclined orbits.

**Space environment:** Earth's Atmosphere, Ionosphere and Meteorological effects on space systems, propagation of signal, Transmission losses in space environment.

**Satellite Technology:** Space segment, Ground segment, Quality and Reliability, Satellite Communication systems.

#### **UNIT-II**

## **Space Applications**

15 Hours

**Launch Vehicles:** Working, stages, Fuel, payload protection, Navigation, guidance and control, Reliability, launching into outer space and launch bases. Types of launch vehicles.

**Space Applications:** Digital DBS TV, DBS-TV System Design, Master Control Station and Uplink Antennas. Introduction, Radio and Satellite Navigation,

**Remote Sensing:** Introduction to Remote Sensing, Concepts and Applications of satellite Remote sensing.

## UNIT-III

## **Advanced Space Systems**

10 Hours

**Satellite Access:** Introduction, Single Access, Pre-assigned FDMA, Demand-Assigned FDMA, Spade system.

**Advanced space systems:** Satellite mobile services, VSAT, Radarsat, orbital communication. Global Positioning Satellite System (GPS).

1.	Discuss the fundamental principles of Satellite communication systems.					
2.	Understand the Propagation impairments of satellite link.					
3.	Explain various segments employed in satellite and ground station.					
4.	Discuss the satellite launch mechanism and roll of those satellite in remote sensing.					

**5.** Understand the different communication systems used for satellite access and list the recent satellites that have been launched for mobile communication, GPS.

Total Teaching Hours	40	CIE + SEE Marks	50+50
Prerequisite	EE1001-1		·

### **Teaching Department: Electrical & Electronics Engineering**

## **Course Objectives:**

1	To familiarize various concepts of BMS		
2	To understand functional blocks of BMS		
3	To study design steps of BMS		
4	To introduce hardware implementation of BMS		

#### UNIT-I

Battery System 08 Hours

Introduction, Cells, Batteries, and Packs, Resistance, Li-Ion Cells, Formats, Chemistry, Safety, Safe Operating Area, Efficiency, Aging, Modeling, Unequal Voltages in Series Strings, Li-Ion BMSs, BMS Definition, Li-Ion BMS Functions, Custom Versus Off-the-Shelf, Li-Ion Batteries, SOC, DOD, and Capacity, Balance and Balancing, SOH

BMS Options 07 Hours

Functionality, CCCV Chargers, Regulators, Meters, Monitors, Balancers, Protectors, Functionality Comparison, Technology, Simple (Analog), Sophisticated (Digital), Technology Comparison, Topology, Centralized, Modular Master-Slave, Distributed, Topology Comparison

### **UNIT-II**

BMS Functions 07 Hours

Measurement, Voltage, Temperature, Current, Management, Protection, Thermal Management, Balancing, Redistribution, Distributed Charging, Evaluation, State of Charge and Depth of Discharge, Capacity, Resistance, State of Health (SOH), External Communications, Dedicated Analog Wire, Dedicated Digital Wire, Data Link, Logging and Telemetry, Off-the-Shelf BMSs, Cell Manufacturers' BMSs, Comparison

Custom BMS Design 08 Hours

Using BMS ASICs, BMS ASIC Comparison, Analog BMS Design, Analog Regulator, Analog Monitor, Analog Balancer, Analog Protector, Ready-Made, Digital BMS Designs, ATMEL's BMS Processor, Elithion's BMS Chip Set, National Semiconductors' Complete BMS, Peter Perkin's Open Source BMS, Texas Instruments' bq29330/bq20z90, Texas Instruments' bq78PL114/bq76PL102, Custom Digital BMS Design, Voltage and Temperature Measurement, Current Measurement, Evaluation, Communications, Optimization, Switching, Logging, Cell Interface, Non-distributed, Distributed Charging

### **UNIT-III**

## Deploying a BMS 10 Hours

Installing, Battery Pack Design, BMS Connections to Pack, BMS Connections to System, Configuring, Cell Configuration, Pack Configuration, System Configuration, Testing, Troubleshooting, Grounding, Shielding, Filtering, Wire Routing

### Course Outcomes: At the end of the course student will be able to

1	Identify process to implement BMS
2	Describe various communication protocol involved in BMS
3	Illustrate functionality of BMS
4	Apply concepts of BMS using application specific IC
5	Analyse the hardware implementation aspects of BMS

BIOMEDIC	CAL INSTRUM	MENTATION	
Course Code:	EE2502-1	Course Type	OEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50
Prerequisite	EC1001-1	·	

### **Teaching Department: Electrical & Electronics Engineering**

### **Course Objectives:**

1.	The course is designed to give the basic concepts of Instrumentation involved in medical
	field and human physiology.
2.	To introduce an fundamental of transducers as applicable to physiology
3.	To explore the human body parameter measurements setups
4.	To make the students understand the basic concepts of forensic techniques.
5.	To give basic ideas about Electrophysiological measurements, medical imaging

### UNIT-I

### **Physiology and transducers**

08 Hours

Cell and its structure, Resting and Action Potential, Nervous system: Functional organization of the nervous system, Structure of nervous system, neurons, synapse, transmitters and neural communication, Cardiovascular system, respiratory system, Basic components of a biomedical system, Transducers, selection criteria, Piezo-electric, ultrasonic transducers, Temperature measurements, Fiber optic sensors.

## **Electro – Physiological measurements**

09 Hours

Electrodes: Limb electrodes, floating electrodes, pre-gelled disposable electrodes, Micro, needle and surface electrodes, Amplifiers: Preamplifiers, differential amplifiers, chopper amplifiers, Isolation amplifier. ECG, EEG, EMG, ERG, Lead systems and recording methods, Typical waveforms. Electrical safety in medical environment: shock hazards, leakage current-Instruments for checking safety parameters of biomedical equipment.

### **UNIT-II**

### Non-electrical parameter measurements

08 Hours

Measurement of blood pressure, Cardiac output, Heart rate, Heart sound Pulmonary function measurements, spirometer, Photo Plethysmography, Body Plethysmography, Blood Gas analyzers: pH of blood, measurement of blood pCO2, pO2, finger-tip oximeter, ESR, GSR measurements

Medical Imaging 07 Hours

Radiographic and fluoroscopic techniques, X rays, Computer tomography, Mammography, MRI, fMRI, Ultrasonography, Endoscopy, Thermography, Different types of biotelemetry systems and patient monitoring

### **UNIT-III**

## Assisting and therapeutic equipments:

08 Hours

Pacemakers, Defibrillators, Ventilators, Nerve and muscle stimulators, Diathermy, Heart Lung machine, Audio meters, Dialyzers, Lithotripsy

## Course Outcomes: At the end of the course student will be able to

1	Understand the physiology of biomedical system
2	Measure biomedical and physiological information
3	Discuss the application of Electronics in diagnostics and therapeutic area.
4	Analyze the images and do a prediction using image processing.
5	Understand the different equipment's used for various measurements of physiology

ELECTRIC	VEHICLE TE	CHNOLOGY	
Course Code:	EE2503-1	Course Type	OEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40+0+0	CIE + SEE Marks	50+50
Prerequisite	EE1001-1	•	

### **Teaching Department: Electrical & Electronics Engineering**

### **Course Objectives:**

1	To Understand the fundamental laws and vehicle mechanics.
2	To Understand working of Electric Vehicles and recent trends.
3	Ability to analyze different power converter topology used for electric vehicle application
4	Ability to develop the electric propulsion unit and its control for application of electric
	vehicles

#### UNIT-I

Vehicle Mechanics 07 Hours

Roadway Fundamentals, Laws of Motion, Vehicle Kinetics, Dynamics of Vehicle Motion, Propulsion Power, Force-Velocity Characteristics, Maximum Gradability, Velocity and Acceleration, Constant FTR, Level Road, Velocity Profile, Distance Traversed, Tractive Power, Energy Required, Nonconstant FTR, General Acceleration, Propulsion System Design..

## **Electric and Hybrid Electric Vehicles**

07 Hours

Configuration of Electric Vehicles, Performance of Electric Vehicles, Traction motor characteristics, Tractive effort and Transmission requirement, Vehicle performance, Tractive effort in normal driving, Energy consumption Concept of Hybrid Electric Drive Trains, Architecture of Hybrid Electric Drive Trains, Series Hybrid Electric Drive Trains, Parallel hybrid electric drive train).

#### UNIT-II

## **Energy storage for EV and HEV**

08 Hours

Energy storage requirements, Battery parameters, Types of Batteries, Modelling of Battery, Fuel Cell basic principle and operation, Types of Fuel Cells, PEMFC and its operation, Modelling of PEMFC, Supercapacitors.

## **Electric Propulsion**

08 Hours

EV consideration, DC motor drives and speed control, Induction motor drives, Permanent Magnet Motor Drives, Switch Reluctance Motor Drive for Electric Vehicles, Configuration and control of Drives.

#### **UNIT-III**

## **Design of Electric and Hybrid Electric Vehicles**

10 Hours

Series Hybrid Electric Drive Train Design: Operating patterns, control strategies, Sizing of major components, power rating of traction motor, power rating of engine/generator, design of PPS

Parallel Hybrid Electric Drive Train Design: Control strategies of parallel hybrid drive train, design of engine power capacity, design of electric motor drive capacity, transmission design, energy storage design.

**Course Outcomes:** At the end of the course student will be able to

1	Explain the roadway fundamentals, laws of motion, vehicle mechanics and propulsion system design
2	Explain the working of electric vehicles and hybrid electric vehicles in recent trends.
3	Model batteries, Fuel cells, PEMFC and super capacitors.
4	Analyze DC and AC drive topologies used for electric vehicle application.
5	Develop the electric propulsion unit and its control for application of electric vehicles.

FUNDAMENTALS OF PLC AND ITS APPLICATIONS											
Course Code:	EE2504-1	Course Type	OEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	EC1001-1	•	•								

### **Teaching Department: Electrical & Electronics Engineering**

## **Course Objectives:**

1.	To understand main parts and their functions, basic sequence of operation of PLC.									
2.	To study the different programming languages and fundamental wiring diagrams.									
3.	To explain the functions of PLC counter instructions, applying combinations of counters and									
	timers to control systems.									
4.	To explain the basic operation of PLC closed-loop control system, various forms of									
	mechanical sequencers and their operations									
5.	To discuss the operation of various processes, structures of control systems and the method									
	of communication between different industrial processes									

#### **UNIT-I**

## **Programmable Logic Controllers**

02 Hours

Introduction, Parts of a PLC, Principles of Operation, PLC Size and Application.

### **PLC Hardware Components**

05Hours

The I/O Section, Discrete I/O Modules, Analog I/O Modules, Special I/O Modules, I/O Specifications, The Central Processing Unit (CPU), Memory Design, Memory Types, Programming Terminal Devices, Human Machine Interface (HMIs).

### **Basic Programming Language**

05Hours

Ladder diagrams, Ladder conventions, Logic functions with timing diagram, latching, multiple outputs, entering programs, Functional blocks, Program examples, instruction list, branch codes, programming examples, Sequential functions charts, branching and convergence, actions, Structured Text, conditional and iteration statements

# Developing Fundamental PLC Wiring Diagrams and Ladder Logic Programs 03Hours

Electromagnetic Control Relays, Contactors, Motor Starters, Manually Operated Switches, Mechanically Operated Switches, Sensors, Output Control Devices, Seal-In Circuits, Latching Relays, Converting Relay Schematics into PLC Ladder Programs, Writing a Ladder Logic Program Directly from a Narrative Description.

#### **UNIT-II**

## **Programming Timers**

02 Hours

Introduction, Necessity of Energy Storage and Methods of Energy Storage (Classification and brief description using block diagram representation)

#### **Programming Counters**

04 Hours

Counter Instructions, Up-Counter, Down-Counter, Cascading Counters, Incremental Encoder-Counter Applications, Combining Counter and Timer Functions.

### **Program Control Instructions**

05 Hours

Master Control Reset Instruction, Jump Instruction, Subroutine Functions, Immediate Input and Immediate Output Instructions, Forcing External I/O Addresses, Safety Circuitry, Selectable Timed Interrupt, Fault Routine, Temporary End Instruction, Suspend Instruction.

### **Data Manipulation Instructions**

02 Hours

Data Manipulation, Data Transfer Operations, Data Compare Instructions, Data Manipulation Programs, Numerical Data I/O Interfaces, Closed-Loop Control.

Math Instructions 02 Hours

Math Instructions, Addition Instruction, Subtraction Instruction, Multiplication Instruction, Division Instruction, Other Word-Level Math Instructions, File Arithmetic Operations

### **UNIT-III**

### **Sequencer and Shift Register Instructions**

closed loop control system

05 Hours

Mechanical Sequencers, Sequencer Instructions, Sequencer Programs, Bit Shift Registers, Word Shift Operations.

## **Process Control, Network Systems, and SCADA**

05 Hours

Types of Processes, Structure of Control Systems, On/Off Control, PID Control, Motion Control, Data Communications, Supervisory Control and Data Acquisition (SCADA).

Course Outcomes: At the end of the course student will be able to

- Identify main parts, functions of PLC and describe basic circuitry for I/O modules to select PLC for desired application
   Apply suitable logic using various programming languages to achieve specific control mechanism for a given application
   Identify timer/counter resources of a PLC to design control logic for interfaced device.
   Interpret data manipulation and math instructions as they apply to a PLC program
   Develop programs that use shift registers and explain functions of control elements of a

MOTORS AND MOTOR CONTROL CIRCUITS											
Course Code:	EE2505-1	Course Type	OEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	EE1001-1	•									

### **Teaching Department: Electrical & Electronics Engineering**

### **Course Objectives:**

1.	Study architecture of induction motor and synchronous motor
2.	Understanding control of AC motor
3.	Study principle of operation of different dc motors
4.	Understand the different types of control techniques
5.	Study different sensors and their role in control of a motor

#### UNIT-I

### **AC Motor Designs**

08 Hours

Introduction, Three phase AC motor architecture, Torque speed curve, wound rotor, Synchronous motors

Single phase AC motors, split phase motor, capacitor start and shaded pole motors, Universal and gear motors, AC Motor Specifications, Specifying an AC motor for an application.

AC Motor Control: 07 Hours

AC motor Enclosures, AC motor control components, Manual motor starting systems, Direct On Line Starter, semi-automatic star delta starter, fully automatic star delta starter, control circuit for sequence operation of two motors

#### **UNIT-II**

DC Motors 07 Hours

DC motor principle of operation, Brushed DC motors, shunt, series and compound wound motors, Brushless DC motors, driving a brushless DC motor, Commutation, Specifying a DC motor

### **DC Motor Control and Stepper Motors**

08 Hours

Stepper motor principles of operation, Illustrative example of a stepper motor drive, stepper motor specification and operation, commercial stepper motor drive chips and packages, Direction Controller- H Bridge, Speed Controller: Pulse Width Modulation (PWM), Armature Controller: Variable resistance, DC vs.AC motors

### **UNIT-III**

Sensors 10 Hours

Unipolar Hall Effect Switches, Omnipolar Hall Effect Switches, Latched Hall Effect Switches, Current Sensors: Shunt resistor, Current-sensing transformer, Hall effect current sensor, Speed/position sensors: Quadrature encoder, Hall effect tachometer, Back EMF/Sensorless control method, BLDC motor control with Hall sensor, Block diagram approach of BLDC Fan and Motor Control

## Course Outcomes: At the end of the course student will be able to

1.	Demonstrate an understanding of the general principles of AC Motor.
	Understand the basic principles of AC motor controls which includes starters, contactors,
2.	and control relays
3.	Demonstrate an understanding of the general principles of DC Motor.
	Understand the basic principles of DC motor controls which includes starters, contactors,
4.	and control relays

**5.** Set up sensors in order to give feedback to a control circuit

NON-CONVENTIONAL ENERGY SOURCES											
Course Code:	EE2506-1	Course Type	OEC								
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								
Prerequisite	EE1001-1	·	·								

### **Teaching Department: Electrical & Electronics Engineering**

### **Course Objectives:**

1.	To understand the principle of extraction of energy from conventional, nonconventional
Δ.	sources
_	To understand the working principle and applications of solar based thermal, electrical
2.	and PV systems.
2	To justify the usage of energy storage techniques and understand the process of design
3.	and implement wind-based energy conversion systems.
4	To understand the process of design and implement biomass-based energy conversion
4.	systems

#### UNIT-I

# Energy Sources 03 Hours

Introduction, Importance of Energy Consumption as Measure of Prosperity, Per Capita Energy Consumption, Classification of Energy Resources, Conventional Energy Resources- Availability and their Limitations, Non-Conventional Energy Resources- Classification, Advantages, Limitations, Comparison of Conventional and Non-Conventional Energy Resources, World Energy Scenario, Indian Energy Scenario

# Solar Energy Basics 05 Hours

Introduction, Solar Constant, Basic Sun-Earth Angles – definitions and their representation, Solar Radiation Geometry (numerical problems), Estimation of Solar Radiation of Horizontal and Tilted Surfaces (numerical problems), Measurement of Solar Radiation Data – Pyranometer and Pyrheliometer

## **Solar Thermal Systems**

04 Hours

Principle of Conversion of Solar Radiation into Heat, Solar Water Heaters (Flat Plate Collectors), Solar Cookers – Box type, Concentrating dish type, Solar driers, Solar Still, Solar Furnaces, Solar Green House.

### **Solar Electric Systems**

04 Hours

Solar Thermal Electric Power Generation, Solar Pond and Concentrating Solar Collector(Parabolic Trough, Parabolic Dish, Central Tower Collector), Advantages and Disadvantages; Solar Photovoltaic – Solar Cell fundamentals, characteristics, classification, construction of module, panel and array. Solar PV Systems- stand-alone and grid connected, Applications- Street lighting, Domestic lighting and Solar Water pumping systems.

#### **UNIT-II**

# Energy Storage 04 Hours

Introduction, Necessity of Energy Storage and Methods of Energy Storage (Classification and brief description using block diagram representation)

Wind Energy 04 Hours

Introduction, Wind and its Properties, History of Wind Energy Wind Energy Scenario – World and India. Basic principles of WECS, Classification, Parts of a WECS,

Derivation for Power in the wind, Electrical Power Output and Capacity Factor of WECS. Wind site selection consideration, Advantages and Disadvantages of WECS.

Biomass Energy 06 Hours

Introduction, Photosynthesis process, Biomass fuels, Biomass conversion technologies, Urban waste to Energy Conversion, Biomass Gasification, Biomass to Ethanol Production, Biogas production from waste biomass, Factors affecting biogas generation, types of biogas plants- KVIC and Janata model, Biomass program in India

#### **UNIT-III**

### **Energy From Ocean**

05 Hours

Tidal Energy – Principle of Tidal Power, Components of Tidal Power Plant, Classification of Tidal Power Plant, Estimation of Energy – Single basin and Double basin type TPP (no derivations, Simple numerical problems), Advantages and Limitation of TPP. Ocean Thermal Energy Conversion (OTEC): Principle of OTEC system, Methods of OTEC power generation – Open Cycle (Claude cycle), Closed Cycle (Anderson cycle), Hybrid cycle, Site-selection criteria, Biofouling, Advantages & Limitation of OTEC

## **Emerging Technologies**

**05 Hours** 

Fuel Cell, Small Hydro Resources, Hydrogen Energy and Wave Energy (Principle of Energy generation using block diagrams, advantages and limitations)

### Course Outcomes: At the end of the course student will be able to

- **1.** Describe non-conventional energy sources and solar radiation geometry to estimate and measure solar radiation.
- 2. Apply the principle of solar radiation into heat to understand the operation of solar thermal and solar electric systems.
- 3. Describe energy storage methods and wind–energy conversion systems to understand the factors influencing power generation.
- **4.** Review the biomass conversion technologies to design biomass-based energy systems.
- Describe tidal, ocean thermal and fuel cell energy conversion systems to understand emerging non-conventional energy technologies.

ELEMENTS OF YOGA											
Course Code:	HU1501-1	Course Type	OEC								
Teaching Hours/Week (L:T:P:S)	3:0:0:0	Credits	03								
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50								

### **Teaching Department: Mechanical Engineering**

Course (	Objectives	:
----------	------------	---

1.	To give a brief history of the development of Yoga
2.	Identify names of different classical texts on Yoga
3.	To illustrate how Yoga is important for healthy living
4.	To explain the Asanas and other Yogic practices
5.	To explain, how Yoga practices can be applied for overall improvement

### **UNIT-I**

Yoga 09 Hours

Meaning and initiation, definitions and basis of yoga, History and development, Astanga yoga, Streams of yoga. Yogic practices for healthy living.

General guidelines for Yoga practices for the beginners: Asanas, Pranayama.

## **Classification of Yoga and Yogic texts**

07 Hours

Yogasutra of Patanjali, Hatha yogic practices- Asanas, Pranayama, Dharana, Mudras and bandhas.

### UNIT-II

### **Yoga and Health**

06 Hours

Concept of health and Diseases-Yogic concept of body – pancakosa viveka, Concept of disease according to Yoga Vasistha.

04 Hours

Yogic concept of healthy living- rules & regulations, yogic diet, ahara, vihara. Yogic concept of holistic health.

## **Applied Yoga for elementary education**

04 Hours

Personality development- physical level, mental level, emotional level. Specific guidelines and Yoga practices for - Concentration development, Memory development

#### **UNIT-III**

## Yoga and physical development

05 Hours

Mind-body, Meditation, Yogasanas and their types. Different Yoga practices and Benefits.

05 Hours

Specific guidelines and Yoga practices for – Flexibility, Stamina, Endurance (Surya Namaskara)

#### **Course Outcomes:** At the end of the course student will be able to

l	1.	Understand a brief history of the development of Yoga								
	2.	Know important practices and principles of Yoga								
	3.	Explain how Yoga is important for healthy living								
	4.	Practice meditation to improvement of concentration etc.								
ĺ	5.	Have knowledge about specific guidelines of yoga practices

INTELLECTUAL PROPERTY RIGHTS											
Course Code	HU1502-1	Course Type	OEC								
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50								

### **Teaching Department: Humanities**

### **Course Objectives:**

- **1.** Understand the creativity component in intellectual property, different types of legal protection of intellectual properties and other basic concepts of Intellectual property.
- 2. Analyze different types of protection for inventions, different types of agreements and treaties for Intellectual properties with an ability to examine patent types, specifications and patent search and database for 'prior art'.
- **3.** Understand the basic procedure of drafting claims, apply for patents, other legal forms of intellectual property rights and also to examine the protocol involved in protection of inventions like patents.

#### UNIT - I

### **Introduction to Intellectual Property**

08 Hours

Invention and Creativity - Intellectual Property (IP) – Importance, Jurisprudential definition and concept of property, rights, duties and their correlation; History and evaluation of IPR – like Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge, Geographical Indications.

## **Agreements and Treaties**

08 Hours

History - General Agreement on Trade and Tariff (GATT). Indian Position vis-a-vis WTO and Strategies; TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities - Budapest Treaty; PCT; Indian Patent Act 1970 & recent amendments - Patent (Amendment) Rules, 2017

### UNIT - II

## **Basics of Patents and Concept of Prior Art**

08 Hours

Introduction to Patents; Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; Specifications: Provisional and complete; Forms and fees Invention in the context of "prior art"; Patent databases; Searching International Databases; Country-wise patent searches (USPTO, EPO, WIPO, IPO, etc.)

## **Patent filing procedures**

08 Hours

National & PCT filing procedure; Time frame and cost; Status of the patent applications filed; Structure of Patent document, Precautions while patenting – disclosure/non-disclosure; Financial assistance for patenting – introduction to existing schemes; Patent licensing and agreement; Patent infringement– meaning, scope, litigation, case studies.

### **UNIT - III**

Case Studies 08 Hours

Patents: Biological Cases - i) Basmati rice ii) Turmeric iii) Neem; Non-biological cases - (i) TVS V/S Hero, (ii) Samsung V/S Nokia - Copyright and related rights - Trade Marks - Trade secrets - Industrial design and Integrated circuits - Geographic indications - Protection against unfair competition; Technology transfer and license agreements (US anti-HIV drug license to Africa).

Course Outcomes: At the end of the course student will be able to

٠,	beenied to be	om only											
	1.	Have a General understanding of the Intellectual Property Rights.											
	2.	Have awareness of different forms of intellectual property rights, national and international											
		IPR related legislations.											
	3.	Have a general understanding about the provisions, privileges and limitations of intellectual											
		property right holders with an understanding of the legal aspects (civil or criminal) of the											
		use of intellectual property rights.											
	4.	Acquire Knowledge of National and International Trade Agreements and Agencies											
		functioning in relation to intellectual property rights											
	5	Re aware and have a general understanding of natenting procedures and licensing

INTRODUCTION TO GERMAN LANGUAGE											
Course Code	HU1503-1	Course Type	OEC								
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50								

### **Teaching Department: Mechanical**

## **Course Objectives:**

- **1.** Distinguish definite and indefinite articles, declension of singular and plural nouns by adding certain endings to them to differentiate between subjects, objects and indirect objects and construct sentences of simple day to day usage.
- 2. Differentiate between nomnative and akkusative cases with transitive and intransitive verbs, and negation with Kein/e/er
- 3. Differentiate use of dative object besides the subject for some specific verbs and Apply the grammar principles of use of personal pronoun as a substitute for noun as per the case, number and gender of the noun.
- **4.** Differentiate preposition forms when used exclusively in akkusative or Dative forms or on combination of the two cases
- **5.** Differentiate conjugation of verbs in present, present-perfect and past participle tenses, separable and inseparable verbs, application of conjugation of modal verbs and position of modal verb in a sentence.

### UNIT - I

15 Hours

Introduction: Mein Name ist (saying who you are, greeting people and saying goodbye, asking people where they come from and where they live. Language point: I and you), Lesen der politischen Karte der Welt, Nationalitaeten und Spachen, Die Uhrzeit (The time) telling time and talking about daily routine, Tage der Woche, die Monate, die vier Jahreszeiten, die Jahre

Mir geht es gut: Asking people how they are, saying how you are, saying which cities and counries people come from, Language points: verb endings),

Wie schreibt man das (how do you write that?) Counting from 1-100 and above, alphabet, spelling our names and words, talking about us and them. Language points: Yes-no questions

Artikel (Articles): As in English, there are definite (der/die/das) and indefinite (ein/eine) articles:

the · der/die/das; a/an · ein/eine

Die vier Fälle (The four cases): Nominativ, Akkusativ, Dativ, Genitiv(Not in level A-1)

Deklination des bestimmten Artikels der/die/das

Deklination des unbestimmten Artikels ein/eine

(Deklination/Declension: the variation of the form of a noun, pronoun, or adjective, by which its grammatical case, number, and gender are identified)

Deklination von Substantiven (Declension of nouns) (Singular and Plural)

(German nouns are declined by attaching certain endings to them, according to case, number and gender. This helps to differentiate between subjects, objects and indirect objects).

Nominative und Akkusativ(nominative and accusative cases)

The verb determines the case of the noun. Some verbs only go with the nominative, others only with the accusative (or the dative). Thus, German verbs are either transitive or intransitive.

(Nominative and accusative cases) Intransitive Verben (intransitive verbs) Transitive Verben (transitive verbs)

Negation "kein/e/er "(negation with "kein/e/er ")

(Singular und Plural)

The negation of the indefinite article (ein/eine/ein) is kein/keine/kein. For this, you just have to put a "k" at the beginning of the declined form of ein/eine/ein.

Peter sieht ein Haus. · Negation · Peter sieht kein Haus.

(Peter sees a house. · negation · Peter does not see a house.)

(With examples, writing and hearing exercises, and German to English Glossary as applicable)

### **UNIT - II**

14 Hours

### Dativ (the dative)

(You are already familiar with verbs which require a direct accusative object in addition to the subject, which is in the nominative case. But there also some verbs which require a dative object besides the subject. To identify the dative object you ask "(To) whom?")

### Der Plural (the plural)

There are many different forms of the plural in the German language. Principally, the gender and the ending of the noun determine the plural form. Then, you either attach a plural ending to the noun, change a vowel, or keep the noun as it is in the singular.

Das Personalpronomen (the personal pronoun)

The personal pronoun is a substitute for a noun. Its forms are determined by the case, number and gender of the noun which is to be replaced.

Die Formen des Personalpronomen im Nominativ (The nominative forms of the personal pronoun):

### Präpositionen (prepositions)

German prepositions are followed by an object, either in the accusative or the dative case. Some prepositions always take an accusative object, others always a dative object. But there are also prepositions which can be followed by both. In this case, the question "Where(to)?"

( · accusative) or "Where?" ( · dative) determines the case of the object.

Präpositionen mit Akkusativ und Dativ

(Prepositions with accusative and dative)

- 1. Präpositionen mit Akkusativ (prepositions with accusative)
- 2. Präpositionen mit Dativ (prepositions with dative)
- 3. Präpositionen mit Akkusativ oder Dativ (prepositions with accusative or dative)

(With examples, writing and hearing exercises, and German to English Glossary as applicable)

#### UNIT - III

11 Hours

Konjugation von Verben im Präsens

(Conjugation of verbs in present tense)

Verbs are conjugated by attaching certain endings, depending on the person and number ofthe subject.

Trennbare und untrennbare Verben

(separable and inseparable verbs)

Verbs with prefixes are dinstinguished between separable and inseparable verbs.

The prefix of an inseparable verb must never be separated from the stem. Here the stress is on the stem: be-kommen. The prefix of a separable verb gets separated from the stem when the verb is conjugated. In the infinitive, the stress is on the prefix: an-kommen

- 1.Trennbare Verben (separable verbs)
- 2.Untrennbare Verben (inseparable verbs)

### Konjugation von Verben im Perfekt

(Conjugation of verbs in present perfect)

The present perfect (Perfekt) describes something which happened in the past and isespecially used in spoken German. It is formed with the present tense form of "haben" or "sein" and the past participle of the main verb.

1. Die Bildung des Partizips

(the formation of the past participle)

2. Die Bildung des Perfekts mit "haben" und "sein"

(the formation of the present perfect with "haben" and "sein")

### Modalverben (modal verbs)

A modal verb is rarely used as a main verb; instead, it usually modifies the main verb. Whilethe main verb remains in the infinitive, the modal verb is conjugated.

In German, there are 7 modal verbs:

können (can/be able), dürfen (may/be allowed), wollen (want), müssen (must/have to), sollen (shall), mögen (to like), möchten (wish/would like)

1. Konjugation der Modalverben

(Conjugation of the modal verbs)

2. Stellung des Modalverbs im Satz

(Position of the modal verb within a sentence)

(With examples, writing and hearing exercises, and German to English Glossary as applicable)

#### **Course Outcomes:** At the end of the course student will be able to

- **1.** Distinguish definite and indefinite articles, declension of singular and plural nouns by adding certain endings to them to differentiate between subjects, objects and indirect objects and construct sentences of simple day to day usage.
- 2. Differentiate between nomnative and akkusative cases with transitive and intransitive verbs, and negation with Kein/e/er
- **3.** Differentiate use of dative object besides the subject for some specific verbs and Apply the grammar principles of use of personal pronoun as a substitute for noun as per the case, number and gender of the noun.
- **4.** Differentiate preposition forms when used exclusively in akkusative or Dative forms or on combination of the two cases
- **5.** Differentiate conjugation of verbs in present, present-perfect and past participle tenses, separable and inseparable verbs, application of conjugation of modal verbs and position of modal verb in a sentence.

Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50									

### **Teaching Department:**

## **Course Objectives:**

1.	Have basic spoken communication skills
2.	Write Simple Sentences
3.	Listen and comprehend basic Japanese spoken Japanese
4.	Read and understand basic Japanese characters including Kanji

#### UNIT - I

(Lessons 1-6) 15 Hours

**Grammar** – Introduction, Alphabets, Accents, Noun, Pronoun, Present Tense, Past tense **Vocabulary** – Numbers, Days, week days, months, Seasons, Nature, Dialogs and Video Clips

## UNIT - II

(Lessons 7-13) 14 Hours

Communication skills – Time, Addective, Seasons, Conversation, Q&A, Hobby, 5-W/1-H, Entering School/Company, Body Parts, Colours, Features etc.

### UNIT - III

(Lessons 14-20) 11 Hours

Japanese Counting System, Birth/Death, Dialogs (Going to Party, Restaurant), My day, Success/Failure, Kanji Characters, and sentence making, Video Clips

## Course Outcomes: At the end of the course student will be able to

- 1. Understand Simple words, expressions and sentences, spoken slowly and distinctly
- 2. Speak slowly and distinctly to comprehend
- **3.** Read and Understand common words and sentences
- **4.** Ask Basic questions and speak in simple sentences
- **5.** Write Hiragana/Katakana and Kanji (120) characters.

Teaching Hours/Week (L:T:P:S)	3:0:0:0	Credits	03
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50

### **Teaching Department: Chemistry**

## **Course Objectives:**

- **1.** To create evolved youth, who will be equipped to contribute in the development of the nation.
- 2. To train students so as to achieve their physical and mental endurance. To acquire body language of smart soldier and to inculcate the sense of authority by commanding the troop under him/her.
- **3.** To inculcate spirit of adventure, undertake adventure activities, to hone leadership qualities and risk-taking abilities.
- **4.** To understand and develop life skills, soft skills and to improve emotional quotient of the student.
- **5.** To impart basic military training, to develop awareness about the defense forces and expose learners to military ethos / values

### UNIT - I

## NCC: Aims, Objectives and Organization

07 Hours

NCC General, Aims, Objectives and Organization of NCC. Duties of NCC Cadets, NCC Camps: Types and Conduct. National Integration: Importance and Necessity, Unity in Diversity.

### **Personality Development**

07 Hours

Self-Awareness, Empathy, Critical and Creative Thinking, Decision Making and Problem Solving. Communication Skills, Coping with stress and emotions. Leadership: Traits, Indicators, motivation, moral values, Honor Code. Social Service and Community Development.

## **UNIT - II**

#### **Naval Communication and Seamanship**

08 Hours

Naval Communication: Introduction, Semaphore, Navigation: Navigation of Ships- Basic requirements, Chart work.

Seamanship: Introduction to Anchor work, Rigging Capsule, Boat work- Parts of Boat, Boat pulling instructions, Whaler sailing instructions. Ship Modeling.

## Disaster management and environmental awareness

08 Hours

Disaster Management- Organization, Types of Disasters, Essential Services, Assistance, Civil Defence organization. Adventure Activities.

Dos and Don'ts, Fire services and Firefighting, Environmental Awareness and Conservation.

### **UNIT - III**

Naval Orientation 10 Hours

Naval Orientation- Armed Forces and Navy Capsule, EEZ Maritime Security & ICG. Border & Coastal Areas: Security setup and Boarder/Coastal management in the area. Naval Orientation: Modes of Entry- IN, ICG, Merchant Navy.

Border and Coastal areas: Security Challenges & role of cadets in Border management

## Course Outcomes: At the end of the course student will be able to

- **1.** Display sense of patriotism, secular values and shall be transformed into motivated youth who will contribute towards nation building through national unity and social cohesion.
- **2.** Demonstrate the sense of discipline, improve bearing, smartness, turnout and develop the quality of immediate and implicit obedience of orders, with good reflexes.
- **3.** Acquaint, expose & provide knowledge about Army/Navy/ Air force and acquire information about expanse of Armed Forces, service subjects and important battles.

Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50								

### **Teaching Department: Humanities**

## **Course Objectives:**

- **1.** To understand the relevance of Culture in Human Life, dynamism of Indian Culture and Arts through ages.
- **2.** To understand the local culture and its vibrancies.
- **3.** To develop awareness about Indian Society, Culture and Arts under Western rule.
- **4.** To comprehend different dimension and aspects of the Indian culture and arts.
- **5.** To appreciate cultural performances in India.

#### UNIT - I

Knowing Culture 08 Hours

What is Culture, Different aspects of Culture, Cultural expression, Importance of Culture

Influence of Culture 07 Hours

Relationship of Culture with: Language, Religion and History, Gender

#### UNIT - II

Media and Culture 07 Hours

Role of News Papers, Indian Cinema, Music, Advertisements

## Languages, Literature and Culture

07 Hours

Role of Sanskrit, Vedas, Upanishads, Ramayana and Mahabharata, Puranas, other Sanskrit Literature, Buddhist and Jain Literature, Dravidian Languages and Literature, North Indian Languages and Literature, Subaltern Literature

## UNIT - III

Arts and Culture 07 Hours

Indian Theatre and Performing Arts, Ritual performances, and Tuluva cultural and ritual performances.

### (Self-study Component)

### **Contribution of Indian History to Culture**

04 Hours

Ancient India – Persian and Macedonian invasions and its impact on Indian Culture, Development of Culture and Arts during the Mauryan Empire (Ashoka), the Guptas, the South Indian Dynasties – the Cholas, Nalanda as a Centre of Learning.

Medieval India – Life of People under Delhi Sultanate, Rise of Islam and Sufism, Political Scene of India, Bhakti Movement, Folk Arts, Rise of Modern Indian Languages.

Modern India – British Ruling and its impact on Indian Culture, Social and Religious Reforms, Indian National Movement and Achievement of Independence.

#### Course Outcomes: At the end of the course student will be able to

- **1.** Examine how the culture has a very important role in human life and growth of human civilization and have a general awareness on historical perspective of growth of Indian Culture and Arts.
- **2.** Appreciate their own local culture from an academic perspective.
- 3. Know about the impact of Western Rule in India and Indian Struggle for Freedom and also its impact on Indian Culture and Arts and able to appreciate and the role of language in connecting people, growth of culture and arts beyond the barriers of religion and ages.

- **4.** Take interest in learning these forms of arts, and also appreciate and preserve them for the future generations feeling proud of Indian Culture, Arts and Architecture.
- **5.** Appreciate art performances in India which will enable them to get exposed to an artistic sphere, which eventually help them to be creative and imaginative.

## **Teaching Department: Visiting**

### **Course Objectives:**

- 1. To provide a new understanding based on which one can move to overcome the current problems, both at the individual level as well as at the societal level.
- **2.** To introduce an orientation course for humanities courses in general and for philosophy courses in particular.
- **3.** To relate philosophy to literature, culture, society and lived experience.
- **4.** To train students in already available philosophical systems.
- **5.** To bridge the gap between theory and practice.

### UNIT - I

### **Knowledge (Vidya) and Ignorance (Avidya)**

14 Hours

**Upanishads** 

Six systems orthodox and Heterodox schools of Indian philosophy

Greek philosophy

## Origin of the universe

NasidiyaSukta: "Who really knows?"

Brhadaranyaka Upanishad; Chandogya Upanishad: Non-Self, real and unreal

Taithriya Upanishad: SikshaValli

Plato's Symposium: Lack as the source if desire and knowledge.

Socratic method of knowledge as discovery

Language: word as root of knowledge (Bhartrahari's Vakyapadiyam)

Fourteen Knowledge basis as a source of Vidya: Four Vedas, six auxiliary sciences (vedangas); Purana,

Nyaya, Mimamsa and Dharma Sastras.

#### UNIT - II

Kn	owledge	e as Po	wer				16 Hours
					 	 1 01.	

Francis Bacon. Knowledge as both power and self- realization in Bhagavad Gita.

### **Knowledge as Oppression**

M. Foucault. Discrimination between Ram and Satyam in Indian Philosophy.

### **Knowledge as Invention**

Modern definition of creativity; scientific activity in the claim that science invents new things at least through technology.

### **UNIT - III**

10 Hours

Knowledge about the self, transcendental self; knowledge about society, polity and nature Knowledge about moral an ethics codes.

**Course Outcomes:** At the end of the course student will be able to

1.	To provide a new understanding based on which one can move to overcome the current
	problems, both at the individual level as well as at the societal level.
2.	To introduce an orientation course for humanities courses in general and for philosophy

To introduce an orientation course for humanities courses in general and for philosophy courses in particular.

- **3.** To relate philosophy to literature, culture, society and lived experience.
- **4.** To train students in already available philosophical systems.
- **5.** To bridge the gap between theory and practice.

**Course Outcomes Mapping with Program Outcomes & PSO**

PRINCIPLES OF PHYSICAL EDUCATION										
Course Code HU1508-1 Course Type OEC										
Teaching Hours/Week (L:T:P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40+0+0+0	CIE + SEE Marks	50+50							

### **Teaching Department: Physical Education**

### **Course Objectives:**

1.	Express understanding of constitution of sports organizations							
2.	Demonstrate considerate familiarity of various food practices							
3.	Grasp understanding of first aid and physical education							
4.	Awareness on the importance of exercise							
5.	Leadership skills and the rules of different sports							

#### UNIT - I

15 Hours

History of Physical Education - Olympic games, Modern Olympic games, Olympic Ideals & Objectives, Olympic Symbols, Olympic Flag, Olympic Emblem, Olympic Motto, Olympic Flame, Asian games International Olympic Committee (IOC), Indian Olympic Association (IOA)

Sports awards - Eligibility, Objectives & Criteria

Yoga - Meaning and Importance

World Health organization (WHO)

#### **UNIT - II**

14 Hours

Concept of Health - Meaning of Health, Health Definition, Factors Affecting Health, Qualities of Healthy Person. Health Hazards of College Students, Physical Fitness and Exercises.

Food and Nutrition - Food & Nutrition Defined, Nutrients and their Functions - i) Proteins ii) Carbohydrates iii) Fats iv) Vitamins

**Balanced Diet & Malnutrition** 

Health Education - Meaning of Health Education, Health Education Defined, Scope of Health Education, Importance of Health Education.

Posture - Concept of Posture, Correct Postures, Common Postural Defects

First Aid - First Aid Defined, Need and importance of First Aid, The Requisites of First Aid, Scope of First Aid, Qualities of a First Aider, Fundamental Principles to be followed and the Duties to be performed by the First Aider, First Aid in Different Cases.

Physical Education - Concept of Physical Education, Physical Education Defined, Importance of Physical Education, Scope of Physical Education, Aims and Objectives of Physical Education.

Teaching Aid in Physical Education

Competition - Introduction, Types of competition, Knock out, League or Round Robin Tournament.

## UNIT - III

11 Hours

Training in Sports – Meaning, Principles, Warming Up & Limbering Down

Importance of Anatomy and Physiology in Physical Education, Oxygen Debt and Second wind Leadership and Supervision – Leadership, Qualities of a good leader in Physical Education, Types of Leadership in Physical Education - 1. Teacher Leadership 2. Student Leadership.

Measurement & specification of various playing fields – Cricket, Volley Ball, Basket Ball, Badminton, Ball Badminton, Foot Ball, Hand Ball & their basic playing skills.

Course Outcomes: At the end of the course student will be able to

- 1. Demonstrate knowledge of structure of the world sports organizations
- 2. Display understanding of different type of food and nutrition for a healthy diet
- **3.** Comprehend awareness of first aid and physical education
- **4.** Elucidate about training and the importance of Physical Education
- **5.** Aware of leadership skills and the knowledge of various sports

LINGUISTICS & LANGUAGE TECHNOLOGY										
Course Code	HU2502-1	Course Type	OEC							
Teaching Hours/Week (L:T:P:S)	3:0:0:0	Credits	03							
Total Teaching Hours	40+0+0+0 CIE + SEE Marks 50+									
Pre-requisite HU1001-1 (Technical English)										

### **Teaching Department: Humanities**

## **Course Objectives:**

1.	Introspect about the consciousness in one's language
2.	Learn pronunciation and how the process helps to communicate effectively.
3.	Build contextual speech and writing with the pedagogy in sentence structure.
4.	Improve skill of applying language to enunciate words.
5.	Progress on the speech aspects by understanding the acquisition of Second Language.

## UNIT - I

## **Introduction to Linguistics**

08 Hours

Broad understanding of Linguistics, Language and characteristic features, Scientific Language, Levels of Linguistic Analysis (Phonetics, Phonology, Morphology, Syntax and Semantics); Approach to Linguistics (Traditional, Structural and Cognitive).

## **Phonology and Morphology**

08 Hours

Perspectives in Linguistics, Phonemes, Allophones, Phonemic Analysis, Morphology and Morphemes, Word building process, Morphological Analysis.

### UNIT - II

Syntax 16 Hours

Constituent structure (Simple Sentence, Noun Phrase, Verb Phrase, Prepositional Phrase, Adjective Phrase, Adverb Phrase, Structure Rules), Tree Diagrams, Case

### UNIT - III

### Sociolinguistics & Psycholinguistics, Artificial Intelligence

08 Hours

Notion of Language Variety, Languages in Contact, Language and Mind, Error Analysis.

### Course Outcomes: At the end of the course student will be able to

- **1.** Understand the importance of language and its facets.
- 2. Demonstrate knowledge of sounds and competence in process of word building.
- **3.** Evolve to reason the constituent parts of a sentence.
- **4.** Understand the techniques of how 'meaning' is applied.
- **5.** Analyze errors in day-to-day-conversations and how language is related to society.

INTRODUCTION TO CYBER SECURITY										
Course Code:	IS2501-1	Course Type	OEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite	IS1651-1	1								

## **Teaching Department: Information Science & Engineering**

### **Course Objectives:**

1.	Define the area of cybercrime and forensics.
2.	Explain the motive and causes for cybercrime, detection and handling.
3.	Investigate Areas affected by cybercrime.
4.	Illustrate tools used in cyber forensic

#### **UNIT-I**

### **Introduction to Cybercrime**

15 Hours

Cybercrime - Definition and Origins of the Word, Cybercrime and Information Security, Who are Cybercriminals? Classifications of Cyber Crimes. **[T1: 1.1-1.5]** 

## **Cyberoffenses: How Criminals Plan Them**

How Criminals Plan the Attacks, Social Engineering, Cyberstalking, Cybercafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector, Cloud Computing. [T1: 2.1-2.8]

#### **Mobile and Wireless Devices**

Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops. **[T1: 3.1-3.12]** 

#### **UNIT-II**

## **Tools and methods used in Cybercrime**

14 Hours

Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Keyloggers and Spywares, Virus and Worms, Trojan-horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. **[T1: 4.1-4.12]** 

#### **Phishing and Identity Theft**

Introduction to Phishing, Identity Theft (ID Theft). [T1: 5.1-5.3]

#### **UNIT-III**

## **Understanding Computer Forensics**

11 Hours

Introduction, Digital Forensics Science, The Need for Computer Forensics, Cyberforensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Setting up a Computer Forensics Laboratory: Understanding the Requirements, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites:

The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Antiforensics. **[T1: 7.1-7.19]** 

Course Outcomes: At the end of the course student will be able to

1.	Comprehend the Cyber crime and its origin
2.	Analyse the cyber crimes in mobile and wireless devices
3.	Apply tools and methods used in Cyber crimes
4.	Analyse Phishing and and ID Theft
5.	Comprehend Digital Forensics

PYTHON APPLICATION PROGRAMMING				
Course Code:	IS2502-1	Course Type	OEC	
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03	
Total Teaching Hours	40	CIE + SEE Marks	50+50	
Prerequisite	CS1001-1			

### **Teaching Department: Information Science & Engineering**

### **Course Objectives:**

1.	Construct Python programs using data types and looping.		
2.	2. Design object-oriented Python programs using classes and objects.		
3.	Design useful stand-alone and CGI applications in		

#### **UNIT-I**

15 Hours

**Introduction:** Introduction to python, Installing Python; basic syntax, interactive shell, editing, saving, and running a script. The concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program; understanding error messages. Conditions, Boolean logic, logical operators; ranges;

Control Statements: if-else, loops (for, while); short-circuit (lazy) evaluation.

String Manipulations: subscript operator, indexing, slicing a string; strings and number system: converting strings to numbers and vice versa, Binary, octal, hexadecimal numbers

Lists, Tuples, and Dictionaries: Basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.

#### **UNIT-II**

15 Hours

**Functions:** Design with functions: hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Program structure and design. Recursive functions.

Classes and OOP: Classes, objects, attributes and methods; defining classes; design with classes, data modelling; persistent storage of objects, inheritance, polymorphism, operator overloading (\_eq\_, \_str\_, etc); abstract classes; exception handling, try block.

### **UNIT-III**

10 Hours

**File Handling:** Manipulating files and directories, Reading from Text Files, Writing to Text Files, Reading from Binary Files, Writing to Binary Files, Seeking Within Files, Creating and Reading a formatted file (csv or tab-separated).

Graphical User Interfaces: event-driven programming paradigm; creating simple GUI; buttons, labels, entry fields, dialogs; widget attributes - sizes, fonts, colors layouts, nested frames Simple CGI form.

Course Outcomes: At the end of the course student will be able to

Demonstrate the basics of Python programming like data types and looping
Apply the basic data structures in solving the problems
Experiment with usage of functions in a given problem
Develop Objects by creating classes and apply object-oriented features
Develop applications in Python using File Programming &User Interface

SOFTWARE	ENGINEERI	NG PRACTICES	
Course Code:	IS2503-1	Course Type	OEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50
Prerequisite	IS1651-1		

## **Teaching Department: Information Science & Engineering**

#### **Course Objectives:**

- **1.** Outline software engineering principles and activities involved in building large software programs.
- **2.** Explain the importance of architectural decisions in designing the software.
- **3.** Describe the process of Agile project development.
- **4.** Recognize the importance of software testing and describe the intricacies involved in software evolution.
- **5.** Identify several project planning and estimation techniques and explain the importance of software quality.

#### UNIT-I

Introduction 15 Hours

Need for Software Engineering, Professional Software Development, Software Engineering Ethics, Case Studies.

# **Software Processes**

Models: Waterfall Model, Incremental Model and Spiral Model; Process activities

## **Requirements Engineering**

Functional and non-functional requirements, Requirements engineering processes, Requirements Elicitation and Analysis, Requirements specification, Software requirements document, Requirements validation & management.

#### UNIT-II

System Models 15 Hours

Context models, Interaction models, Structural models, Behavioral models.

#### T Architectural Design

Architectural design decisions. Architectural Views and patterns, Application architectures.

# **Design and implementation**

Object oriented Design using UML.

## **Agile Software Development**

Agile methods, Plan-driven and agile development, Extreme Programming, Agile project management.

#### **UNIT-III**

Project Management 10 Hours

Risk management, Teamwork.

## **Project Planning**

Software pricing, Plan-driven development, Project Scheduling.

## **Quality Management**

Software quality, Reviews and inspections, Software measurement and metrics, Software standards.

1.	Recognise the basics of software system, component, process and Software Requirement Specification to meet desired needs within realistic constraints and outline the professional and ethical responsibility
2.	Describe the waterfall, incremental and iterative models and architectural design in implementing the software

- implementing the softwareMake use of the techniques, skills, modern engineering design tools and agile methods
- **4.** Describe the methods for maintaining software system.

necessary for engineering practice.

**5.** Discuss project planning and management and illustrate the quality of software products

## **Teaching Department: Information Science & Engineering**

## **Course Objectives:**

1.	Illustrate the Semantic Structure of HTML and CSS
2.	Compose forms and tables using HTML and CSS
3.	Design Client-Side programs using JavaScript and Server-Side programs using PHP
4.	Illustrate the Database connectivity using PHP
5.	Examine JavaScript frameworks such as jQuery

## UNIT-I

Introduction to HTML 15 Hours

HTML tags and simple HTML forms, web site structure, HTML table, Need for CSS, introduction to CSS, basic syntax and structure, using CSS, background images, colours and properties, manipulating texts, using fonts, borders and boxes, margins, padding lists, positioning using CSS, Selectors, The Cascade: How Styles Interact, The Box Model, CSS Text Styling.

## UNIT-II

#### Client side Scripting

15 Hours

Introduction to JavaScript: JavaScript language – declaring variables, scope of variables functions, event handlers (on click, on submit etc.), Document Object Model, Form validations. Introduction to PHP: Declaring variables, data types, arrays, strings, operations, expressions, control structures, functions, Reading data from web form controls like Text Boxes, radio buttons, lists etc.,

#### UNIT-III

PHP Databases 10 Hours

Basic command with PHP examples, Connection to server, creating database, selecting a database, listing database, listing table names creating a table, inserting data, altering tables, queries, deleting database, deleting data and tables, File Handling in PHP, PHP Arrays and Superglobals, Arrays, \$\_GET and \$\_POST Superglobal Arrays, jQuery Introduction: What is jQuery, Adding jQuery in to your web pages, jQuery Syntax, jQuery Selectors, jQuery Events.

## Course Outcomes: At the end of the course student will be able to

1.	Adapt HTML and CSS syntax and semantics to build web pages
2.	Construct and visually format tables and forms using HTML and CSS.
3.	Experiment with the usage of Event handling and Form validation using JavaScript.
4.	Understand the principles of object-oriented development using PHP and Database
	concepts.
5.	Inspect JavaScript frameworks like jQuery which facilitates developers to focus on core
	features

GRAPH THEORY										
Course Code:	MA1501-1	Course Type	OEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							

**Teaching Department: Mathematics** 

## **Course Objectives:**

- **1.** Explain subgraphs, bipartite graphs, isomorphic graphs etc. Apply the concept of trees and its properties
- 2. Distinguish between Hamilton and Eulerian graph. Distinguish between planar and nonplanar graphs and apply their properties to solve problems.
- **3.** Represent a graph in terms of adjacency matrix, incidence matrix etc. and vice-versa.
- **4.** Find the shortest path between two vertices in a graph. Find minimal spanning tree.

#### UNIT-I

## **Introduction to graphs**

11 Hours

Graphs and Graph Models, digraphs, Konigsberg bridge problem. Special Types of Graphs: Subgraphs-spanning and induced subgraphs, Isomorphism of graphs. Some Special Simple Graphs, complete graph, Bipartite Graphs.

Connectivity: point and line connectivity

Trees and its properties.

# **Euler and Hamilton graphs**

04 Hours

Eulerian and Hamiltonian graphs and their applications.

#### UNIT-II

Planar graphs 09 Hours

Euler's polyhedron formula, outer planar graphs, applications

Colorability 07 Hours

Chromatic number, five color theorem, chromatic polynomial, Applications of graph coloring.

## Representation of graphs

Adjacency matrix, incidence matrix, circuit matrix, cut set matrix. Path matrix

#### **UNIT-III**

Network Flows 04 Hours

Max -flow and Min-cut Theorem(statement), problems.

# Shortest paths in weighted graphs

Dijkstra's algorithm to find shortest paths.

Spanning trees 05 Hours

Algorithms to find a spanning tree, minimal spanning tree-Kruskal's & Prim's algorithm.

## **Course Outcomes:** At the end of the course student will be able to

- **1.** Distinguish between bipartite and complete bipartite graphs, identify whether two graphs are isomorphic, find subgraphs of a graph etc.
- 2. Distinguish between Eulerian and Hamiltonian graphs.
- **3.** Identify whether a graph is planar and to find the chromatic polynomial of a graph.
- **4.** Representing graphs interms of Matrices.
- **5.** Apply algorithmic methods to find the shortest path between two given vertices. Use a suitable algorithm to find a minimal spanning tree.

# **Course Objectives:**

- **1.** Understand the divisibility of integers, study of prime numbers and basic properties of congruences.
- 2. Study Fermat's little theorem and understand Euler's function.
- **3.** Study the existence of primitive roots and quadratic residues.
- **4.** Study the cryptographic applications in number theory.

#### UNIT-I

# Divisibility and the theory of congruences

15 Hours

Division algorithm, Euclid's algorithm for the greatest common divisor. Linear Diophantine equations. Prime numbers, fundamental theorem of arithmetic. Basic properties of congruences, Linear congruences and Chinese reminder theorem.

#### **UNIT-II**

07 Hours

Fermat's theorem, Wilson's theorem, Euler's Phi function, Euler's theorem.

# **Primitive roots and Quadratic congruences**

08 Hours

Order of an integer modulo n, primitive roots for primes, Euler's criterion, Legendre symbol and its properties.

#### UNIT-III

#### Cryptography

10 Hours

Introduction to public key cryptography, RSA cryptosystem, an application of primitive roots to cryptography.

#### **Course Outcomes:** At the end of the course student will be able to

- 1. Use divisibility and Greatest common divisor in Euclidean algorithm. Solve Diophantine equations. Identify prime factorization of an integers.
- **2.** Understand the properties of congruences. Use Chinese reminder theorem to find solution of system of linear congruences
- **3.** Use Fermat's Little Theorem and Wilson's Theorem. Use of Euler's Phi function.
- **4.** Identify primitive roots of an integers. Apply Euler's criterion and Legendre symbols.
- **5.** Code and decode numbers in the RSA cryptosystem.

Prerequisite	MA1001-1 an	nd MA2009-1		

## **Teaching Department: Mathematics**

## **Course Objectives:**

- Understand the concepts of vectors, bases.
   Determine the kernel, range, rank, and nullity of a linear transformation and apply them suitably in their field of study.
- **3.** Find the canonical forms and appraise its importance in various fields.
- **4.** Make use of Gram-Schmidt process to produce an orthonormal basis.
- **5.** Learn the concepts of singular value decomposition and PCA.

#### UNIT-I

# Vector spaces 08 Hours

Vector spaces, subspaces, bases and dimensions, coordinate vecotrs, null spaces and column spaces of the matrices.

# Linear Transformations 07 Hours

Linear transformations, rank-nullity theorem, algebra of linear transformations, change of basis, linear operators, linear functionals, transpose of a linear transformation.

#### **UNIT-II**

#### Canonical Forms 08 Hours

Review of characteristic values, similarity of matrices, Cayley Hamilton theorem, annihilating polynomials, invariant subspaces, Jordan and rational canonical forms.

## Inner Product Spaces

Inner products; inner product spaces; orthogonal sets and projections; Gram-Schmidt process; QR-factorization, Least-squares problems.

#### UNIT-III

## **Symmetric Matrices and Quadratic Forms**

10 Hours

07 Hours

Diagonalization, quadratic forms, constrained optimization, singular value decomposition and principal component analysis. Applications to linear recurrence relations.

## Course Outcomes: At the end of the course student will be able to

- Interpret vectors in two and three-dimensional spaces both algebraically and geometrically.
   Analyze the concept of a linear transformation as a mapping from one vector space to another and be able to calculate its matrix representation with respect to standard and nonstandard bases.
- **3.** Understand the concepts of Jordan and rational canonical forms.
- **4.** Make use of Gram-Schmidt process to produce an orthonormal basis and also able to use least square approximation method to obtain the solution of ill conditioned system.
- **5.** Apply techniques of constrained optimization singular value decomposition and PCA for problems arising in various engineering fields.

AUTOMOTIVE ENGINEERING							
Course Code:	ME1501-1	Course Type	OEC				
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03				
Total Teaching Hours	40	CIE + SEE Marks	50+50				

## **Teaching Department: Mechanical Engineering**

## **Course Objectives:**

1.	Get an idea on the different components of an engine and its types with lubrication system.
2.	Understand the fuel supply system and ignition systems used in automobiles.
3.	Demonstrate the working of transmission system.
4.	Explain the importance of suspension system, steering geometry and drives in automobiles
5.	Know the concept of braking system, tyres and emission control.

#### UNIT-I

# **Engine Components and Cooling & Lubrication Systems**

08 Hours

SI & CI engines, Cylinder arrangements and their relative merits, Liners, Piston, connecting rod, crankshaft, valves, valve actuating mechanisms, valve and port timing diagrams, Choice of materials for different engine co mponents, engine positioning, cooling requirements, methods of cooling, thermostat valves, different lubrication arrangements, crankshaft/flywheel position sensor, accelerator pedal sensors, engine coolant water temperature sensor.

# **Fuel Supply Systems for SI and CI Engines**

08 Hours

Fuel mixture requirements for SI engines, types of carburetors, si mple carburetor, multi point and single point fuel injection systems, CRDI, fuel transfer pumps: AC Mechanical Pump, SU Electrical Pumps, injectors, Fuel gauge sensor, Throttle position sensor, Mass air flow sensors.

Ignition Systems: Battery Ignition systems, magneto Ignition system, Transistor assisted contacts. Electronic Ignition, Automatic Ignition advance systems, Lighting systems, Rain/Light sensors, starting device (Bendix drive)

Pedagogy: Chalk and talk method, Power Point Presentation

#### UNIT-II

Power Trains 07 Hours

Clutches - Single plate, multiplate and centrifugal clutches. Gear box: Necessity for gear ratios in transmission, Constant m esh gear box, Synchromesh gear box, principle of automatic transmission, Vehicle Speed Sensors, calculation of gear ratios, Types of transmission systems. No numerical.

Drive to Wheels 08 Hours

Propeller shaft, universal joints, Hotchkiss. and torque tube drives, differential, rear axle, steering geometry, camber, king pin inclination, included angle, castor, toe in & toe out, condition for exact steering, power steering, over steer, under steer & neutral steer, Steering angle sensors, numerical problems.

Suspension and Springs: Requirements, leaf spring, coil spring, Torsion bar suspension systems, independent suspension for front Wheel, Air suspension system. Collective bargaining; Characteristics, Necessity, Forms Safety & Health; Industrial accidents, Safety Quality circle; Meaning, Structure

Pedagogy: Chalk and talk method, Power Point Presentation

#### **UNIT-III**

Brakes 09 Hours

Types of brakes, mechanical, compressed air, vacuum and hydraulic braking systems, construction and working of master and wheel cylinder, brake shoe arrangements, Disk brakes, Drum brakes.

Tyres: Desirable tyre properties, Types of tyres.

Automotive Emission: Automotive exhaust emissions, sources and emission control method: EGR, SCR. Emission Standards, Exhaust sensors.

Electric Vehicles.

Pedagogy Chalk and talk method, Power Point Presentation

# Course Outcomes: At the end of the course student will be able to

- **1.** Describe and demonstrate the layout of an automobile and components of an automobile engine. Explain cooling and lubrication systems.
  - **2.** Explain and demonstrate the fuel supply and Ignition systems for SI and CI engines.
- **3.** Describe and demonstrate the transmission system
- **4.** Explain and demonstrate the components of drive to wheel and suspension system, calculate the parameters of steering geometry.
- **5.** Describe and demonstrate automotive braking system. Explain types and construction of tyres and wheels. Explain the significance of automotive emissions and its controlling methods

INDUSTRIAL	. POLLUTION	N CONTROL	
Course Code:	ME1502-1	Course Type	OEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50

## **Teaching Department: Mechanical Engineering**

## **Course Objectives:**

- 1. Know the Consequences of pollution, relationship between man and environment over the last few decades, necessity of modern awareness on pollution and how carbon audit can help in developing a carbon strategy.
- 2. Identify the Importance of Meteorology in pollution control and global warming, various types of plume dispersions and its effect; analyze various levels of plume height for different pollutants.
- **3.** Distinguish Particulates and fly ash separation techniques such as cyclone separator, electrostatic precipitator efficiency calculations etc.
- **4.** Illustrate Formation, measurement and control techniques for Smoke and gaseous pollutants.
- 5. Summarize the Effects of water, soil, plastics and odor pollution their control techniques, Different Pollution Control Acts, Legal aspects of pollution control and how these acts can help in bringing down the pollution rate.

#### UNIT-I

#### **Introduction to Pollution**

08 Hours

Man and the environment, types of pollution and its consequences, Changing environmental management concept, sustainable industrial growth, carbon audit, Ill effects of various pollutants, permissible concentration levels & AQI.

#### Meteorology

08 Hours

Meteorology, Wind rose, Lapse rate, plume dispersion studies & Numerical problems. Pedagogy: Chalk and talk method, Power Point Presentation

## **UNIT-II**

## **Separation techniques**

08 Hours

Different types of Particulates, Need for Separation techniques, Sources of Particulates Matter Fly Ash Electrostatic precipitator (Problems) Theory of settling processes (Design Problems), Bag House fabric filter Cyclone separator Spray Tower Scrubbers & Venturi Scrubber

## Smoke and gaseous pollutants:

08 Hours

Smoke- White, blue and black smoke, Sources of smoke, T,T,T-O Principle of smoke Measurement of stack smoke intensity using Ringlemann Chart and Smokescope &Bosch Smoke meter, Domestic and Industrial Incinerators-Design factors, Pollutant gaseous So2, Co, UBHC, Nox their ill effects and & control methods.

Pedagogy: Chalk and talk method, Power Point Presentation

#### **UNIT-III**

08 Hours

Water, soil, noise, and odor pollution, their control methods, problems associated with nuclear reactors, Legal aspects of pollution control in India, brief details of Euro and BS standards Pedagogy: Chalk and talk method, Power Point Presentation

## Course Outcomes: At the end of the course student will be able to

	Particulate matters and AQI.
2.	Outline the instruments for Meteorological measurements, distinguish types of plume
	dispersions and its effect; analyze the concentration of various gaseous pollutants from T-
	7 diagrams

Identify the various types of pollutants and distinguish between them with regards to

- **3.** Explain the Particulates and fly ash separation techniques, compare and Interpret their efficiency
- **4.** Illustrate Formation, measurement and control techniques for Smoke and gaseous pollutants
- **5.** Identify Effects of water, soil, plastics and odor pollution on environmental Pollution and explain the Legal aspects of pollution control.

SUSTAINABLE DEVELOPMENT GOALS						
Course Code:	ME1503-1	Course Type	OEC			
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03			
Total Teaching Hours	40	CIE + SEE Marks	50+50			

## **Teaching Department: Mechanical Engineering**

# **Course Objectives:**

1.	To provide the knowledge, skills, attitudes and values necessary to address sustainable
	development challenges
2.	Address the global challenges including poverty, inequality, climate change, environmental
	degradation, peace and justice.
3.	To learn more and take action.
4.	Addresses critical global challenges put forth by UN.
5	Analyze how sustainable development can be achieved in practice

# **UNIT-I**

08 Hours

The origin, development and idea of the SDGs History and origins of the Sustainable Development Goals. What are the SDGs? What are their aims, methodology and perspectives? How are they related to the Millennium Development Goals?

SDGs and Society 08 Hours

Ensuring resilience and primary needs in society In-depth discussion and analysis of goals related to poverty, hunger, health & well-being and education

Pedagogy: Chalk and talk method, Power Point Presentation

#### UNIT-II

SDGs and Society 14 Hours

Strengthening Institutions for Sustainability In-depth discussion and analysis of goals related to gender equality, affordable and clean energy, sustainable cities & communities, and peace, justice & strong institutions

SDGs and the Economy: Shaping a Sustainable Economy In-depth discussion and analysis of goals related to work & economic growth, industry, innovation & infrastructure, inequalities, responsible production & consumption

Pedagogy: Chalk and talk method, Power Point Presentation

#### **UNIT-III**

# **SDGs and the Biosphere**

10 Hours

Development within Planetary Boundaries In-depth discussion and analysis of goals related to clean water, climate, life below water and life on land

Realizing the SDGs: Implementation through Global Partnerships In-depth discussion and analysis of SDG 17 which aims to implement the SDGs through partnerships, finance, technology and the development of coherence between policies.

Pedagogy: Chalk and talk method, Power Point Presentation

- **1.** Summarize the UN"s Sustainable Development Goals and how their aims, methodology and perspectives.
- **2.** Analyze the major issues affecting sustainable development and how sustainable development can be achieved in practice.

- **3.** Identify and apply methods for assessing the achievement/possibilities of sustainable development in Nitte gram panchayath.
- **4.** Evaluate the implications of overuse of resources, population growth and economic growth. sustainability & Explore the challenges the society faces in making transition to renewable resource use.
- **5.** Create skills that will enable students to understand attitudes on individuals, society and their role regarding causes and solutions in the field of sustainable development.

Innovation Systems: The Concept of Innovation Systems - Innovation Systems: Sectoral, Regional,

National.

Technology Management and Transfer: Technology Transfer - Impacts of MNCs in technology transfer

# **Introduction to Technological Forecasting**

05 Hours

Introduction - Applications & Limitations of Technological Forecasting – Technology Forecasting Techniques – Exploratory Forecasting – Normative Forecasting – Delphi Technique – Problems of Technological Forecasting

## Course Outcomes: At the end of the course student will be able to

- **1.** Define operations management and quality.
- **2.** Describe technological innovation and its key features for business.
- 3. Discuss innovation management and the difference between invention and innovation.
- **4.** Explain innovation as a management process, its management and perspectives. Understand Innovation management techniques.
- **5.** Explain innovation systems, technology management transfer and basics of technological forecasting.

**Course Outcomes Mapping with Program Outcomes & PSO**

HUMAN RESOURCE MANAGEMENT					
Course Code:	MG1501-1	Course Type	OEC		
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03		
Total Teaching Hours	40	CIE + SEE Marks	50+50		

## **Teaching Department: Mechanical Engineering**

## **Course Objectives:**

1.	To develop a meaningful understanding of HRM theory, functions and practices.
2.	To understand concepts and skills recruitment.
3.	To understand the concepts of training and development.
4.	To deal with employees' grievances, safety and health types of organizations.
5.	To understand the concepts of e-HRM.

#### **UNIT-I**

# **Human Resource Management & HRP**

08 Hours

Introduction, meaning, nature, scope of HRM. Major functions of HRM, Personnel Management vs Human Resource Management, job design, job evaluation, job analysis, job specification, job enlargement, job enrichment. Role of HR Manager.HR Planning. Process HRP.

Recruitment 08 Hours

Definition, Sources and Methods of Recruitment Selection: Definition and Process of Selection. Cost benefit analysis of selection.

Placement: Meaning, Induction/Orientation, Internal Mobility, Transfer, Promotion, Demotion and Employee Separation. Performance Appraisal methods.

Pedagogy: Chalk and talk method, Power Point Presentation

#### UNIT-II

#### **Training and development**

07 Hours

Training v/s development, stages in training, Training Methods, Executive Development, Methods and Development of Management Development, Career and Succession Planning.

Compensation 08 Hours

Employee remuneration, rewards, Wage and Salary Administration, Bonus, fringe benefits. Internal Mobility, External Mobility, Trade union Act (Amendment) 2001.

Employee Grievances: Employee Grievance procedure. Discipline procedure

Collective bargaining; Characteristics, Necessity, Forms Safety & Health; Industrial accidents, Safety Quality circle; Meaning, Structure

Pedagogy: Chalk and talk method, Power Point Presentation

## **UNIT-III**

IHRM and e-HRM 09 Hours

Managing IHRM. e-HR Activities, Global recruitment, selection, expatriates. Industrial conflict – Causes, Types, Prevention and Settlement.

Aspects of e-HRM,e-Job design & Analysis, Ethical issues in employment

Pedagogy: Chalk and talk method, Power Point Presentation

1.	Describe the basic concepts of HRM & HRP.
2.	Elucidate the HRM functions of recruitment, selections, and appraisal.
3.	Apply the training, development and compensation methods in HRD.
4.	Identify the employee grievances to spell out the remedial measures.
5	Infer the concents of e-HRM and I-HRM

MANAGEMENT ACCOUNTING AND CONTROL SYSTEM						
Course Code:	MG1502-1	Course Type	OEC			
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03			
Total Teaching Hours	40	CIE + SEE Marks	50+50			

**Teaching Department: Management** 

# **Course Objectives:**

1.	Apply Cost Accounting concepts and techniques in the decision making process.
2.	Make decisions such as pricing, special order pricing, make-or-buy and elimination of a part
	of the company or replacement of equipment.
3.	Understand the relevance of different types of costs in the decision making process such as
	relevant costs, sunk costs or controllable costs.
4.	Understand fundamental concepts in Financial, Cost & Management Accounting.
5.	Develop analytical skills associated with the preparation and interpretation of Financial
	Statement

#### **UNIT-I**

## **Introduction to Cost and Management Accounting and Marginal Costing**

07 Hours

Cost Accounting – Meaning, Objectives and Scope, Management Accounting – Meaning, Objectives and Scope, Tools and Techniques of Management Accounting, Relationship of Cost Accounting, Financial Accounting, Management Accounting and Financial Management, Conflicts in Profit versus Value Maximization Principle, Role of Management Accountant in Decision Making.

Marginal Costing 08 Hours

Meaning, Advantages, Limitations and Applications. Breakeven Analysis, Cost Volume Profit Analysis, P/V Ratio and its Significance, Margin of Safety, Absorption Costing: System of Profit Reporting and Stock Valuation, Difference between Marginal Costing and Absorption Costing, Income Measurement under Marginal Costing and Absorption Costing. (Practical Problems)

#### **UNIT II**

# **Standard Costing and Budgetary Control**

07 Hours

Standard Costing – Definition, Significance and Applications, Various Types of Standards, Installation of Standard Costing System-for Material, Labour, and Overhead. Variance Analysis for Materials, Labour and Overheads, Accounting Treatment of Variances. Benchmarking for Setting of Standards, Variance Reporting to Management. (Practical Problems)

Budgetary Control 08 Hours

Budget Concept, Manual, Fixed and Flexible Budgets, Preparation and Monitoring of Various Types of Budgets, Budgetary Control System- Advantages, Limitations and Installation. Zero Base Budgeting, Programme and Performance Budgeting. (Practical Problems)

#### **UNIT III**

# **Fund Flow and Cash Flow Statement**

05 Hours

Fund Flow Statement Analysis - Definition, Features, Steps for Preparation of Fund Flow Statement.

# **Cash Flow Statement Analysis**

05 Hours

Classification, Preparation of Cash Flow Statement, Uses of Cash Flow statement, Difference between Cash Flow and Fund Flow Statement. (Practical Problems)

- **1.** Describe the Cost Accounting concepts and techniques in the decision making process.
- **2.** Elucidate the Make decisions such as pricing, special order pricing, make-or-buy and elimination of a part of the company or replacement of equipment.

3.	Apply the relevance of different types of costs in the decision making process such as relevant									
	costs, sunk costs or controllable costs.									
4.	Identify fundamental concepts in Financial, Cost & Management Accounting.									
5.	Infer the analytical skills associated with the preparation and interpretation of Financial									
	Statement

OPERATIONS AND QUALITY MANAGEMENT											
Course Code:	MG1503-1	MG1503-1 Course Type									
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03								
Total Teaching Hours	40	CIE + SEE Marks	50+50								

**Teaching Department: Management** 

Course Objectives:	Course	Obj	ectiv	es:
--------------------	--------	-----	-------	-----

1.	Define production/operations management. Differentiate between Production and service system and types of production systems Discuss continuous and intermittent production systems with
	their advantages and disadvantages. Discuss CRM and ERP systems.
2.	Solve problems on fundamentals of statistics and normal distribution. Draw and Analyze variable process control charts and determine process capability.
3.	Discuss Total Quality Management tools and methods. Calculate reliability of series and parallel systems using the information on failure rate and time.
4.	Solve decision-making problems using break even analysis and decision tree methods. Apply the concepts of Design and System capacity. Solve problems on faculty location using break even analysis and transportation method. Solve problems related to product and process layouts.
5.	Use concepts of replacement theory to solve problems of replacing items that fail gradually and suddenly.

#### UNIT-I

## **Production and Operations Management**

06 Hours

Introduction, Functions within business organizations, the operation management function, Classification of production systems, Productivity, factors affecting productivity, Introduction to Customer Relationship Management (CRM) and Enterprise Resource Planning (ERP).

# Philosophy of statistical process control and modeling process quality

11 Hours

Normal distribution tables, Finding the Z score, Central limit theorem, Chance and assignable causes of variation, Statistical Basis of the Control Charts (basic principles, choices of control limits, significance of control limits, warning limits)

Control charts for variables: Control Charts for X-Bar and R- Charts, Type I and Type II errors, Simple Numerical Problems,

Process capability: The foundation of process capability, Natural Tolerance limits,  $c_p$  – process capability index,  $c_{pk}$ ,  $p_p$  – process performance index, summary of process measures. Numerical problems. Concept of Six sigma. Pedagogy: Chalk and talk method, Power Point Presentation

# **UNIT II**

# **Quality Concepts and Reliability**

06 Hours

Introduction to Quality Concepts: The Meaning of Quality and Quality Improvement, Key dimensions of Quality, Concept of cost of quality. Customers' perception of quality.

TOTAL Quality Management: Definition, Principles of TQM, Gurus of TQM, Benefits of TQM.

Managing Quality: Quality circles, Continuous Improvement- Juran's Trilogy, PDSA cycle, Kaizen, 7 QC tools. Introduction to reliability, Mean time to failure, Mean time between failures, Bath tub curve, Reliability of series and parallel systems, Numerical problems on the above topics.

#### **Operations Management activities**

12 Hours

Decision Making: The decision process, characteristics of operations decisions, use of models - decision making environments. Break even Analysis, Decision trees.

Capacity Planning: Importance of capacity decisions, defining and measuring capacity, determinants of effective capacity. Design, System an actual capacity. System efficiency and utilization. Determination of Equipment requirement for a single stage production processes. Numerical problems on the above.

Facilities location planning: Need for location decisions, nature of locations decisions, general procedure for making locations decisions, Use of Breakeven analysis and Transportation algorithms for making location decisions.

Facilities layout planning: Need for layout decisions. Minimizing material handling cost in process ayout using Load distance analysis, Simple line balancing problems in product layout.

#### **UNIT III**

#### **Replacement Theory**

05 Hours

Replacement policy for equipment which deteriorates gradually. Replacement of items that fail suddenly. Pedagogy: Chalk and talk method, Power Point

#### **Course Outcomes:** At the end of the course student will be able to

edition 2008, Prentice Hall.

- 1. Define production/operations management. Differentiate between Production and service system and types of production systems Discuss continuous and intermittent production systems with their advantages and disadvantages. Discuss CRM and ERP systems.
- 2. Solve problems on fundamentals of statistics and normal distribution. Draw and Analyze variable process control charts and determine process capability.
- 3. Discuss Total Quality Management tools and methods. Calculate reliability of series and parallel systems using the information on failure rate and time.
- **4.** Solve decision-making problems using break even analysis and decision tree methods. Apply the concepts of Design and System capacity. Solve problems on faculty location using break even analysis and transportation method. Solve problems related to product and process layouts.
- **5.** Use concepts of replacement theory to solve problems of replacing items that fail gradually and suddenly.

ORGANIZATIONAL BEHAVIOUR										
Course Code:	MG1504-1	Course Type	OEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							

## **Teaching Department: Management**

## **Course Objectives:**

1.	Describe the Nature and Characteristics, Determinants and Approaches of Organizational									
	Behaviour. Describe the concepts of Perception, Attitudes and values and their implications.									
2.	Describe the concepts of learning and motivation along with their managerial implications.									
3.	Describe the concepts of Leadership along with their managerial implications.									
4.	Discuss the concepts of group dynamics and conflict management along with their									
	implications.									
5.	Discuss the concepts of Organization culture and change and conflict management along									
	with their implications.									

## UNIT-I

15 Hours

Introduction: Conceptual Foundation of Organisational Behaviour; Nature and Characteristics; Determinants; Contributing Disciplines; Challenges and Opportunities for Organisational Behaviour, Models and Approaches of Organizational Behaviour, OB and Emotional Intelligence.

Perception, Attitude, and Values: Nature, Process, Importance, Factors Influencing Perception; Attribution Theory of Perception; Issues Involved in Perception: Selective Perception, Halo Effect, Contrast Effect, Projection, Stereotyping; Concept of Pygmalion Effect; an overview of Emotions and feelings, Values, Beliefs and Attitudes with Managerial Implications.

Learning: Concept; Theories of Learning: Conditioning, Social Learning, Managerial Implication of Learning Theories. Reinforcement.

Motivation: Concept, Major Theories and Process of Motivation: Maslow's Need-Hierarchy Theory; Herzberg's Motivation-Hygiene Theory; McGregor's Theory X and Theory Y; Goal- Setting Theory; ERG Theory; Vroom's Expectancy Theory; Equity Theory; Managerial implications of Various Theories.

Pedagogy: Chalk and talk method, Power Point Presentation, Case studies

#### **UNIT II**

15 Hours

Leadership: Concept and Functions; Style and Theories of Leadership: Traits, Behavioural and Situational/ Contingency Groups of Theories; Inspirational approaches to Leadership; Charismatic Leadership, Transformational Leadership, and Transactional Leadership, Contemporary Leadership Roles; Challenges to the Leadership Construct; Substitutes and Neutralizers to Leadership.

Group Behaviour: Groups: Concept and Classification; Stages of Group Development; Group Structure; Roles and Norms; Premise and Issues; Group Decision-Making: Group vs Individual; Groupthink and Groups Shift; Group Decision Making Techniques and Process.

Conflict Management: Concept; Causes; Types; Stages; Effects; Management of Conflicts.

Pedagogy: Chalk and talk method, Power Point Presentation, Case studies

#### **UNIT III**

10 Hours

Organizational Culture: Concept; Dominant Culture; Strong vs Weak Cultures; Creating and Sustaining Culture; Employees Learning of The Culture; Creating a Customer-Responsive Culture.

Organizational Changes: Concept and Forces for Change; Managing Planned Changes; Resistance to Change; Approaches to Manage Organizational Change; Organizational Development; Culture-Boundedness of Managing the Change.

Pedagogy: Chalk and talk method, Power Point Presentation, Case studies

## **Course Outcomes:** At the end of the course student will be able to

- Describe the Nature and Characteristics, Determinants and Approaches of Organizational Behaviour. Describe the concepts of Perception, Attitudes and values and their implications.
   Describe the concepts of learning and motivation along with their managerial implications.
   Describe the concepts of Leadership along with their managerial implications.
   Discuss the concepts of group dynamics and conflict management along with their implications.
  - 5. Discuss the concepts of Organization culture and change and conflict management along with their implications.

TAXATION FOR ENGINEERS										
Course Code: MG1505-1 Course Type OEC										
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							

#### **Teaching Department: Management**

# **Course Objectives:**

1.	To make students understand the overview of Income Tax Law in India.
2.	To make students understand the basic concepts of income tax such as residential status,
	tax incidence.
3.	To make students understand the income tax provisions involved in determination of
	income from salary, House property, business and profession, capital gain and other
	sources.
4.	To help students understand the determination of tax liability Individual assessees.
5.	To make students understand the deductions u/s 80.

#### UNIT-I

## **Basic concepts and Explanation under various Heads of Income**

15 Hours

Basic concepts: Assessment Year, Previous Year, Person, Assessee, Income, Charges on Income, Gross Total Income, Capital and Revenue Receipts, Residential status, Connotation of income, Deemed to accrue or arise in India, Incidence of tax, Tax Planning, Tax Evasion, Tax Management. (Problems on Residential Status of Individual assessee)

Explanation under various Heads of Income: Income from Salary (theory, basic and full-fledged problems on allowances, perquisites and retirement benefits)

#### **UNIT II**

# Income under the head Profit and gains of Business or Professions and Income under Capital Gain

15 Hours

Income under the head Profit and gains of Business or Professions and its computation - basis - Method of accounting - Scheme of business deductions/ allowance - Deemed profits - maintenance of books, (Problems on computation of Income from Business/ Profession of Individual assessee)

Income under Capital Gain: Basis of charge, Transfer of capital asset, inclusion & exclusion from Capital Asset, Capital Gain, Computation of Capital Gains (theory & problems), Exemptions/deductions from capital gains

#### **UNIT III**

# **Income from House Property and Other Sources**

10 Hours

Income from House Property - Basic problems on House Property

Income from Other Sources (theory only)

Deductions under section 80C to 80U (No problems - Provisions only)

- Exhibit an understanding of the Income Tax Law in India.
   Identify the nature of Incomes and their tax incidence.
   Demonstrate how to determine the income from salary, house property, business and profession, capital gain.
- **4.** Demonstrate the determination of tax liability of Individual assessees.

**5.** Exhibit a clear understanding of various provisions of deductions u/s 80.

WORKING CAPITAL MANAGEMENT										
Course Code: MG1506-1 Course Type OEC										
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							

**Need of the Course:** The course will enable the student to manage activities in the area of working capital in an enterprise and help the students to do advance study in the field of financial-management through detailed analysis of financial statements, liquidity crises, cash optimization, credit analysis etc. The student will learn how to apply sound techniques for managing inventory.

**Description of the Course:** Every business needs adequate liquid resources in order to maintain day-to-day cash flow. It needs enough cash to pay wages and salaries as they fall due and to pay creditors if it is to keep its workforce and ensure its supplies. Maintaining adequate working capital is not just important in the short-term. Sufficient liquidity must be maintained in order to ensure the survival of the business in the long-term as well. Even a profitable business may fail if it doesn't have adequate cash flow to meet its liabilities as they fall due.

# **Teaching Department: Management**

1.	Discuss the importance of working capital management.
2.	Evaluate working capital requirement.
3.	Assess the challenges faced in managing working capital in domestic and international
	operations.
4.	Plan for financing working capital requirement.

#### **UNIT-I**

# Working Capital Decisions, Working Capital Management and Sources of Working Capital

15 Hours

Working Capital Decisions: Meaning, Concepts, components Importance & types of working Capital. Working Capital Management: Meaning, objectives, Principles, Importance of adequate working capital & consequences of inadequate working capital, Dangers of excessive working capital, determinants of working capital - operating cycle and Cash cycle. Approaches to determine an appropriate financing mix, Estimation of working capital requirements (problems) important working capital ratios.

Sources of Working Capital: Financing of long term working capital & short term working capital. Factoring - Meaning mechanism, Functions, types, merits & demerits.

## **UNIT II**

# **Liquidity Management and Receivable Management**

15 Hours

Liquidity Management: Cash Management - Meaning - Objectives of Cash Management - Nature of Cash - Motives of holding cash - Cash Management planning aspects - Cash Budgets (Problems), Cash Management control aspects - Concentration banking - Lock box system - Playing the float - Cash Management models - William J Baumol Model - Miller-Orr Model (Problems using these models)

Receivable Management: Definition, Objectives, cost and benefits of receivable. Credit policy & its variables. Types of Credit policy & their merits & demerits, Factors influencing the size of investment in receivables. Control of receivables. Framing optimum credit policy & Average collection period (Problems)

#### **UNIT III**

# **Inventory Management**

10 Hours

Meaning of Inventory - Need/Purpose of holding inventory - Benefits of holding inventory - Risk and cost of holding inventory - Management of Inventory - Objectives of Inventory Management - Techniques of Inventory Management - Economic Order Quantity (EOQ) - Determination of Stock levels - ABC analysis - Just in Time (JIT).

## Course Outcomes: At the end of the course student will be able to

1.	Understand the meaning of working capital							
2.	Realize the importance of management of working capital in an organization							
3.	Learn about some key liquidity ratios used to understand more about a business' working							
	capital position							
4.	Understand various techniques used to manage working capital.							
5.	Be aware of the techniques of cash, inventory and receivables management.

NANOTECHNOLOGY										
Course Code:	PH2501 -1	Course Type	OEC							
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03							
Total Teaching Hours	40	CIE + SEE Marks	50+50							
Prerequisite	PH1001 -1									

## **Teaching Department: PHYSICS**

## **Course Objectives:**

- **1.** To understand the basic scientific concepts of nanoscience, properties of nano materials, synthesis and fabrication of nano materials.
- **2.** To understand the various characterization techniques of nano materials.
- **3.** Study of carbon nano technology and its characterizations.
- **4.** To understand the applications of nano technology in various science, engineering and technology fields.

#### UNIT-I

# **Properties of Materials**

07 Hours

Introduction: History of nano science, definition of nano meter, nanomaterials, nano technology. Classification of nano materials. Crystal symmetries, crystal directions, crystal planes, Band structure. Properties Of Materials: Mechanical properties, electrical properties, dielectric properties, thermal properties, magnetic properties, opto electronic properties. Effect of size reduction on properties, electronic structure of nano materials.

## **Synthesis and Fabrication**

08 Hours

Synthesis of bulk polycrystalline samples, growth of single crystals, Synthesis techniques for preparation of nano particle – Bottom Up Approach – sol gel synthesis, hydro thermal growth, thin film growth, PVD and CVD; Top Down Approach – Ball milling, micro fabrication, lithography, Requirements for realizing semiconductor nano structure, growth techniques for nano structures.

#### **UNIT-II**

## **Characterization Techniques**

15 Hours

X-Ray diffraction and Scherrer method, scanning electron microscopy, transmission electron microscopy (TEM), scanning probe microscopy (SEM), atomic force microscopy (AFM), piezoresponse microscopy, X-ray photoelectron spectroscopy, XANES and XAFS, angle resolved photoemission spectroscopy, diffuse reflectance spectra, photoluminescence spectra, UV-VIS-IR Spectrophotometers, Magnetic and electrical measurements and Infrared/ Raman, EPR and NMR

#### **UNIT-III**

## **Carbon Nano Technology**

05 Hours

Characterization of carbon allotropes, synthesis of diamond – nucleation of diamond, growth and morphology. Applications of nano crystalling diamond films, grapheme, and applications of carbon nano tubes.

#### **Applications of Nano Technology**

05 Hours

Applications in material science, biology and medicine, surface science, energy and environment. Applications of nano structured thin films, applications of quantum dots.

- **1.** Ability to choose the appropriate nano material to meet the requirerment of a particular application.
- **2.** Identify the essential concepts used in nanotechnology.
- **3.** Identify the materials, properties, synthesis and fabrication of nanomaterials.

4.	Understand the various characterization techniques of nano materials.
5.	Applications of nanomaterials in various fields

OPTOELECTRONIC DEVICES								
Course Code:	PH2502-1	Course Type	OEC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
Total Teaching Hours	40	CIE + SEE Marks	50+50					
Prerequisite	PH1001 -1		·					

**Teaching Department: PHYSICS** 

# **Course Objectives:**

- **1.** To understand the basic principles of construction, working and applications of various optoelectronic devices.
- 2. Study of sources of radiation like lasers and LED, their specific properties and hence their use for applications.
- **3.** Study of radiation detectors like semiconductor detector, diode as detector and photo multiplier.
- **4.** Understanding the fabrication and applications of optical fibers, optical modulators and waveguides for optical communication

#### **UNIT-I**

## **Optical processes in Semiconductor, Display devices & Optical fibers**

15 Hours

Elements of optical phenomena in Semiconductors- fundamentals of Fermi-Dirac distribution, band structure, direct and indirect band gap semiconductors, generation-recombination mechanisms, absorption and emission processes.

Display devices- cathode ray tube, liquid crystal display, charge coupled devices, plasma display. Optical fibers- types of fibers, modes of propagation, attenuation and losses, optical fiber communication system, advantages.

#### **UNIT-II**

## **Optical Sources and Detectors**

15 Hours

Lasers- basic principles, optical resonator-types, modes and quality factor, practical lasers- Nd-YAG, CO2, Excimer laser, Semiconductor laser- basic structure, laser action, heterojunction laser, quantum well laser, applications.

Light emitting diode- electroluminescence in p-n junction, LED characteristics, efficiency and responsivity, Heterojunction LED, Surface-Emitting LED and Edge emitting LED.

Photo detectors- photo conductor detector, junction photo diode, p-i-n photo diode, avalanche photo diode. Photo multiplier tube.

#### **UNIT-III**

#### **Integrated Optics and Modulators**

10 Hours

Modulation of light- Analog and digital modulation, Direct modulation - using LED and Semiconductor diode laser (SDL). External modulation - Electro-optic modulators (Pockels effect), Electro-absorption modulators. Acousto-optic modulation. Waveguides- device structure, waveguide devices – waveguide lenses, light bending devices, optical power dividers, directional couplers, waveguide polarizer, wavelength multiplexers and demultiplexers. Waveguide coupling. Optoelectronic integrated circuit

- **1.** Ability to choose the appropriate device to meet the requirement of a particular application.
- **2.** Making modifications to device structures by understanding the factors affecting their performance.
- **3.** Attempting better efficiency and utility through an understanding of the principles of performance.

4.	Use the technical knowledge acquired to troubleshoot and rectify devices and circuits.
5.	Explore the possibility of designing devices with better characteristics.

AUTONOMOUS MOBILE ROBOTS								
Course Code:	RI2501-1	Course Type	OEC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
<b>Total Teaching Hours</b>	40	CIE + SEE Marks	50+50					
Prerequisite	EC 1001-1, N	/IE 1003-1						

#### **Teaching Department: Robotics and Artificial Intelligence**

#### **Course Objectives:**

Explain different types of locomotion in mobile robots to obtain a required task.
 Understand the different types of kinematics and dynamics involved in a mobile robot.
 Study the different types of sensors used in an autonomous mobile robot.
 Understand the different types of algorithms to identify the position of the mobile robot.
 Understand the various algorithms for planning and navigation of the mobile robot.

#### UNIT-I

Robot locomotion 07 Hours

Types of locomotion, hopping robots, legged robots, wheeled robots, stability, maneuverability, and controllability.

# Mobile robot kinematics and dynamics

09 Hours

Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots.

#### UNIT-II

Perception 07 Hours

Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots like global positioning system (GPS), Doppler effect-based sensors, vision-based sensors, uncertainty in sensing, filtering.

Localization 07 Hours

Odometric position estimation, belief representation, probabilistic mapping, Markov localization, Bayesian localization, Kalman localization, and positioning beacon systems.

#### **UNIT-III**

#### Introduction to planning and navigation

10 Hours

Path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP).

#### Course Outcomes: At the end of the course student will be able to

1.	Explain different types of locomotion in mobile robots to obtain a required task.
2.	Identify the different types of kinematics and dynamics involved in a mobile robot.
3.	Apply the different types of sensors used in an autonomous mobile robot.
4.	Apply the different types of algorithms to identify the position of the mobile robot.
5.	Apply the various algorithms for planning and navigation of the mobile robot to reach the
	destination.

#### **Teaching Department: Robotics and Artificial Intelligence**

### **Course Objectives:**

1.	Understand the types of medical robots used in the field of healthcare.
2.	Explain the various localization and tracking sensors
3.	Understand the applications of surgical robots with the help of few case studies
4.	Understand Rehabilitation of limbs and brain machine interface with the help of few case
	studies
5.	Understand the design methodology of medical robots.

#### **UNIT-I**

07 Hours Introduction

Types of medical robots - Navigation - Motion Replication - Imaging - Rehabilitation and Prosthetics - State of art of robotics in the field of healthcare. Localization And Tracking

#### **Position sensors requirements**

09 Hours

Tracking - Mechanical linkages - Optical - Sound-based - Electromagnetic - Impedance-based - Inbore MRI tracking - Video matching - Fiber optic tracking

#### **UNIT-II**

#### **Control Modes Radiosurgery**

07 Hours

Orthopedic Surgery - Urologic Surgery and Robotic Imaging - Cardiac Surgery - Neurosurgery case studies.

Rehabilitation 07 Hours

Rehabilitation for Limbs - Brain-Machine Interfaces - Steerable Needles - case studies.

#### **UNIT-III**

#### **Design of Medical Robots**

10 Hours

Characterization of gestures to the design of robots- Design methodologies- Technological choices - Security

# Course Outcomes: At the end of the course student will be able to

1.	Describe the types of medical robots and the concepts of navigation and motion replication.
2.	Describe about the sensors used for localization and tracking
3.	Explain the applications of surgical robots
4.	Explain the concepts in Rehabilitation of limbs and brain machine interface
5.	Classify the types of assistive robots and analyze the design characteristics, methodology
	and technological choices for medical robots.

# PLC CONTROL OF HYDRAULIC AND PNEUMATIC CIRCUITS

(For All except AI)

Ų.	or / iii cheepi	. 7 11)	
Course Code:	RI2503-1	Course Type	OEC
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03
Total Teaching Hours	40	CIE + SEE Marks	50+50
Prerequisite	EE 1001-1,	EC 1001-1	

#### **Teaching Department: Robotics and Artificial Intelligence**

#### **Course Objectives:**

1.	To understand the fundamentals of fluid power transmission systems
2.	To design various hydraulic system components.
3.	To design various pneumatic system components.
4.	Learn various types of hydraulic and pneumatic power circuits.
5	Learn various types of applications in fluid power circuits using PLC

## UNIT-I

#### Fluid power systems and fundamentals

06 Hours

Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, General types of fluids - Properties of hydraulic fluids - Fluid power symbols. Basics of Hydraulics-Applications of Pascal's Law

#### **Hydraulic system components**

05 Hours

Sources of Hydraulic Power: Pumping theory - Pump classification - construction and working of pumps - Variable displacement pumps, pump performance. Actuators: Linear hydraulic actuators-Single acting and double acting cylinders, Rotary actuators - Fluid motors.

# **Control Components**

04 Hours

Direction control valve - Valve terminology - Various center positions. Shuttle valve - check valve - pressure control valve - pressure reducing valve, sequence valve. Flow control valves - Fixed and adjustable Safety valves.

#### **UNIT-II**

# **Pneumatic system components**

07 Hours

Pneumatic Components: Properties of air. Compressors. FRL Unit -Air control valves, Quick exhaust valves and pneumatic actuators- cylinders, air motors. Basics of low-cost automation

#### Fluidics & Pneumatic circuit design

08 Hours

Fluidics - Introduction to fluidic devices, simple circuits. Introduction to Electrohydraulic Pneumatic logic circuits, PLC applications in fluid power control, Sequential circuit design for simple applications using classic, cascade, logic with Karnaugh- Veitch Mapping and combinational circuit design methods.

#### **UNIT-III**

#### Fluid power circuits

10 Hours

Electrical control of pneumatic and hydraulic circuits-use of relays, timers, counters, Ladder diagram. Programmable logic control of Hydraulics Pneumatics circuits, PLC ladder diagram for various circuits, motion controllers, use of field busses in circuits. Electronic drive circuits for various Motors.

#### **Course Outcomes:** At the end of the course student will be able to

1.	Compare the basics of hydraulics to the performance of fluid power systems
2.	Explain the working principle of hydraulic systems including pumps and control components.
3.	Explain the working principle of pneumatic systems and their components.
4.	Design various types of Electrohydraulic and electro pneumatic circuits
5.	Design various types of applications in fluid power circuits using PLC.

Teaching Hours/Week (L:T:P:S)	1:0:0:0	Credits	0							
Total Teaching Hours	15+0+0+0	CIE + SEE Marks	50+0							

# **Teaching Department: Any Department**

Course Objectives.	Course	Obi	jectives:
--------------------	--------	-----	-----------

- **1.** ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಸಾಂಸ್ಕ್ರತಿಕ ಕನ್ನಡದ ಜೊತೆಗೆ ಕ್ರಿಯಾತ್ಮಕ ಕನ್ನಡವನ್ನು, ಕನ್ನಡ ಸಾಹಿತ್ಯ, ಸಂಸ್ಕ್ರತಿ ಮತ್ತು ನಾಡು ನುಡಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
- 2. ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಕನ್ನಡ ಭಾಷೆಯ ವ್ಯಾಕರಣದ ಬಗ್ಗೆ ಅರಿವು ಮೂಡಿಸುವುದು ಮತ್ತು ಕನ್ನಡ ಭಾಷಾ ರಚನೆಯಲ್ಲಿನ ನಿಯಮಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
- **3.** ಕನ್ನಡ ಭಾಷಾ ಬರೆಹದಲ್ಲಿ ಕಂಡುಬರುವ ದೋಷಗಳು ಹಾಗು ಅವುಗಳನಿವಾರಣೆ.
- **4.** ಸಾಮಾನ್ಯ ಅರ್ಜಿಗಳು, ಸರ್ಕಾರಿ ಮತ್ತು ಅರೆಸರ್ಕಾರಿ ಪತ್ರ ವ್ಯವಹಾರದ ಬಗ್ಗೆ ಅರಿವು ಮೂಡಿಡಿಸುವುದು.
- **5.** ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡ ದಪದಗಳ ಪರಿಚಯ ಮಾಡಿ ಕೊಡುವುಧು.

#### UNIT - I

#### ಲೇಖನಗಳು:

- 1. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ: ಹಂಪನಾಗರಾಜಯ್ಯ
- 2. ಕರ್ನಾಟಕದ ಏಕೀಕರಣ: ಒಂದು ಅಪೂರ್ವಚರಿತ್ರೆ ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ
- 3. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ ವಿತಾವಿಯ ಆಡಳಿತ ಕನ್ನಡ ಪುಸ್ತಕದಿಂದ ಆಯ್ದ ಲೇಖನ

#### ಕಾವ್ಯಭಾಗ (ಆಧುನಿಕಪೂರ್ವ)

1. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿಲಕ್ಕಮ್ಮ

06 Hours

- 2. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನು ಫಲ ಇದರಿಂದೇನು ಫಲ ಪುರಂದರದಾಸ
- 3. ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳುಮನವೆ ಕನಕದಾಸ
- 4. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳಸುಟ್ಟು ಶಿಶುನಾಳಪಂಥಷರೀಫ
- 5. ಶಿವಯೋಗಿ: ಬಾಲಲೀಲಾ ಮಹಾಂತ ಶಿವಯೋಗಿ
- 6. ಜನಪದಗೀತೆ: ಬೀಸುವಪದ, ಬಡವರಿಗೆ ಸಾವ ಕೊಡಬೇಡ

#### UNIT - II

# ಕಾವ್ಯಭಾಗ (ಆಧುನಿಕ)

- 1. ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗ: ಡಿ.ವಿ.ಜಿ.
- 2. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ.ಬೇಂದೈ
- 3. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

4. ಹೆಂಡತಿಯ ಕಾಗದ: ಕೆ .ಎಸ್. ನರಸಿಂಹಸ್ವಾಮಿ

06 Hours

- 5. ಮಬ್ಬಿನಿಂದ ಮಬ್ಬಿಗೆ: ಜಿ. ಎಸ್. ಶಿವರುದ್ರಪ್ಪ
- 6. ಆಮರ ಈ ಮರ: ಚಂದ್ರಶೇಖರ ಕಂಬಾರ
- 7. ಚೋಮನ ಮಕ್ಕಳ ಹಾಡು: ಸಿದ್ದಲಿಂಗಯ್ಯ

# ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಪರಿಚಯ, ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ

- 1. ಡಾ. ಸ ರ್ಎಂ ವಿಶ್ವೇಶ್ವರಯ್ಯ ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ: ಎ ಎನ್ಮೂರ್ತಿ ರಾವ್
- 2. ಯುಗಾದಿ: ವಸುಧೇಂದ್ರ
- 3. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ: ಹಿ. ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

# UNIT - III

## ವಿಜ್ಞಾನ ಮತ್ತು ತಂತ್ರಜ್ಞಾನ:

- 1. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ: ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ
- 2. 'ಕ' ಮತ್ತು 'ಬ' ಬರಹ ತಂತ್ರಾಂಶಗಳು ಮತ್ತು ಕನ್ನಡ ಚೈಪಿಂಗ್
- 3. ಕನ್ನಡ: ಕಂಪ್ಯೂಟರ್ಶಬ್ದಕೋಶ
- 4. ತಾಂತ್ರಿಕ ಪದಕೋಶ: ತಾಂತ್ರಿಕ ಹಾಗೂ ಪಾರಿಭಾಷಿಕ ಕನ್ನಡ ಪದಗಳು

03 Hours

# Course Outcomes: At the end of the course student will be able to

- **1.** ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಸಾಂಸ್ಕ್ರತಿಕ ಕನ್ನಡದ ಜೊತೆಗೆ ಕ್ರಿಯಾತ್ಮಕ ಕನ್ನಡವನ್ನು, ಕನ್ನಡಸಾಹಿತ್ಯ, ಸಂಸ್ಕ್ರತಿ ಮತ್ತು ನಾಡುನುಡಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

# **ESSENCE OF INDIAN CULTURE**

				_
Course Code:	HU1005-1	Course Type:	HEC	
Teaching Hours/Week (L: T: P: S):	1:0:0:0	Credits:	01	
Total Teaching Hours:	15	CIE + SEE Marks:	50+50	

## **Teaching Department: Respective Department**

# **Course Objectives:**

- **1.** To facilitate students with the concepts of Indian Culture and to make them understand the roots of knowledge system.
- 2. To acquaint students with Indian Culture and inculcate an ability to analyze it.
- **3.** To apply various approaches for the enhancement of living ideals based on Indian traditional knowledge.

#### **UNIT-I**

# **Introduction to Traditional Knowledge**

**6 Hours** 

Define traditional knowledge, nature and characteristics, scope and importance, kinds of traditional knowledge, Indigenous Knowledge and its characteristics, Traditional Knowledge vis-a-vis Indigenous Knowledge, Traditional Knowledge vis-a-vis Western Knowledge

#### **UNIT-II**

# **Significance of Traditional Knowledge**

6 Hours

Value of Traditional Knowledge in global economy, Role of Government in harnessing Traditional Knowledge, Traditional medicine system, Traditional Knowledge in agriculture. food and healthcare.

#### **UNIT-III**

#### **Holistic Healthcare for Human Well-being**

3 Hours

Definition of Ayurveda, Ayurveda for Life, Health and Well-being, Introduction to principles of Ayurvedic healing and Astanga Ayurveda.

# Course Outcomes: At the end of the course student will be able to

- 1. Identify the concept of Traditional Knowledge and its importance.
- **2.** Explain the need for and importance of protecting Traditional Knowledge.
- 3. Illustrate the various enactments related to Traditional Knowledge.
- **4.** Familiarize the importance of Holistic Healthcare.

# **Teaching Department: Respective Department**

# **Course Objectives:**

1.	Understand Rural Society

- **2.** Acquire the knowledge about Rural Economy
- **3.** Know the working of rural administration
- **4.** Familiarize the different rural schemes of Governance

# UNIT-I

# **Appreciation of Rural Society**

3 Hours

Rural Society, Caste and Gender relations, Rural values, Nature and Resources, Rural infrastructure.

# **Understanding Rural Economy & Livelihood**

3 Hours

Agriculture, Farming, Landownership, Water Management, Animal Husbandry, Non-Farm Livelihoods and Artisans, Rural Entrepreneurs.

#### UNIT-II

Rural Institutions 3 Hours

Traditional Rural Organizations, Self-help Groups, Panchayat Raj Institutions - Gram Sabha, Gram Panchayat, Standing Committees

# **Rural Development Programmes**

3 Hours

History of Rural Development in India, Current National Programmes - Sarva Shiksha Abhiyaan, Beti Bachao – Beti Padhao, Ayushmaan Bharath, Swachh Bharath, PM Awaas Yojana, Skill India, Decentralised Planning, NRLM, MNREGA

#### **UNIT-III**

#### **Corporate Social Responsibility (CSR)**

3 Hours

Global Guidelines on CSR, Growing Importance of CSR, CSR in India

**Course Outcomes:** At the end of the course student will be able to

- 1. Comprehend Rural Society and its Economy
- 2. Identify the working of Rural Administration and different rural schemes
- **3.** Grasp the working of Corporate Social Responsibility

# **Teaching Department: Respective Department**

# **Course Objectives:**

Understand Time Management, Managing Information Overload, Coping with Peer pressure and Stress Management
 Familiarize the Science behind Personal Health Management and Addictions
 Appreciate the importance of cultivating good hobbies, need for forming good habits and discarding bad habits and holding difficult conversations during crises
 Comprehend the importance of Creative Thinking, Continuous and Lifelong Learning, Collaboration and Team Work

# UNIT-I

Equip them to excel in real work environment proactively

#### **Introduction to Life Skills**

3 Hours

Meaning and Importance of Life Skills, Competitive Job market, Fast paced changes in Technology, Proliferation of Electronic Gadgets and harmful online content.

# **Time Management**

Introduction to Time Management, Impulsive Behaviour vis-a-vis goal Directive Behaviour, Time log, Information Overload and coping with Information & Communication Technology (ICT) Revolution; Proliferation of Electronic Media; Exponential growth in online content; Impact of Information Overload on human brain

# **Science behind Personal Health Management**

3 Hours

Ignorance in Society on health issues, World Health Organization (WHO) - Definition of Health, Human Evolution, Importance of physical work for human body & mind, Dangers of sedentary lifestyle, Germ diseases versus Lifestyle diseases, Integrating physical exercise into daily life

#### **Science behind Addictions**

Addiction - Meaning, Neurology and Hormonal basics of Addictive Behaviour, How addictions are formed; Harmful effects of addictions on Physical and Mental Health, Recognizing addictions in oneself, Coming out of addictions

#### **UNIT-II**

# **Need for cultivating good hobbies**

3 Hours

Need for Hobbies in maintaining Work-Life Balance; how hobbies help in maintaining good physical and mental health, Various Hobbies

#### **Habits**

Difference between hobbies & habits, Cultivating good habits & discarding bad habits: Role of habits for a successful life, How habits form; Analyzing one's own habits; Recognizing useless & harmful habits, Cultivating & Sustaining useful habits

# Peer pressure and How to cope with it

3 Hours

Human being as a Social Animal, Physical Pain & Social Pain; Awareness of Harmful Social Pressure, Role of Prefrontal Cortex in Judgement and Decision Making, why teenagers are vulnerable to peer pressure, strategies to overcome harmful peer pressure

#### **Stress Management**

Stress, Types of Stress, Fight & Flight Response of Humans; Harmful effects of chronic stress; Symptoms of Poor Coping Skills of Stress, Stress & Psychiatric problems, Easy coping strategies for stress

#### **UNIT-III**

#### **Continuous & Lifelong Learning**

3 Hours

Accelerated change in Technology Landscape, Shorter Life Cycles of Technologies, Need for Continuous Learning of other skills

# **Team Working Skills & Collaboration**

Team Work – Meaning, Skills and Relevance, Importance of Collaboration to succeed in one's own career, How to be a good team member

# Course Outcomes: At the end of the course student will be able to

- **1.** Apply the concept of Time Management, cope with Information Overload and withstand harmful peer pressure
- **2.** Comprehend the need to stay away from addictions by realizing the biological basis behind these concepts
- **3.** Develop good hobbies to maintain ideal work-life balance
- **4.** Develop the aptitude for finding creative solutions to problems and realize the importance of continuous and lifelong learning
- **5.** Demonstrate positive and progressive abilities

Course Code:		UM1003-1	Course Type	MNC						

Teaching Hours/Week (L: T: P: S)	1:0:0:0	Credits	00
<b>Total Teaching Hours</b>	15+0+0+0	CIE + SEE Marks	50+00

#### **Teaching Department: Civil Engineering**

# **Course Objectives:**

- **1.** To explain the students the necessity of clearing the aptitude tests irrespective of the written test is for jobs or higher education.
- 2. To assess the readiness of the students to appear for the aptitude test and assisting them to better it if already ready, else train them.
- To evaluate the understanding of the students in answering quantitative multiple-choice questions and guide them to improve it.
- **4.** To evaluate the preparedness of the students to answer the analytical and logical questions.
- **5.** To evaluate the quality of the students with regard to their professional language grammar, vocabulary and communication skills.

#### UNIT-I

Quantitative 06 Hours

Numbers (Odd, even, H.C.F & L.C.M, Square roots & cube roots, Average, Percentage), Ratios & Proportions, Partnership, Time & work, Pipes & Cistern, Speed, Problems on trains, Problems on boats & streams, Allegation & Mixtures.

#### UNIT-II

#### **Analytical/Logical**

06 Hours

Numerical logic (next number in series, odd man out), Coded language, Syllogism, Direction (N-E-W-S), Seating arrangement, Blood relations, Statement & Conclusion

#### UNIT-III

Verbal 03 Hours

Vocabulary (root words, prefix, suffix, synonyms, antonyms), One word substitution, Idiom/phrases, Sentence completion, Active & Passive voice, Direct and indirect speech.

#### **Course Outcomes:** At the end of the course student will be able to

- **1.** Answer the quantitative multiple-choice questions.
- **2.** Analyse the analytical and logical questions.
- **3.** Improve the professional language grammar, vocabulary and communication skills.
- **4.** Clear the aptitude tests of any employer or higher educational institution.
- **5.** Advance in the chosen field of interest by appending aptitude skills with the technical skills

<b>Total Teaching Hours</b>	15+0+0+0	CIE + SEE Marks	50+00					

#### **Teaching Department: Civil Engineering**

#### **Course Objectives:**

- To explain the students the necessity of clearing the aptitude tests irrespective of the written test is for jobs or higher education. To assess the readiness of the students to appear for the aptitude test and assisting them to 2.
- better it if already ready, else train them.
- To evaluate the understanding of the students in answering quantitative multiple-choice 3. questions and guide them to improve it.
- To evaluate the preparedness of the students to answer the analytical and logical questions. 4.
- To evaluate the quality of the students with regard to their professional language grammar, vocabulary and communication skills.

#### UNIT-I

Quantitative 06 Hours

Permutations & Combinations, Area, volume & surface areas, Profit & loss, Simple and compound interest, Logarithms, Stocks & Shares, Discounts (True discounts, bankers' discount), Clocks & Calendars

#### UNIT-II

#### **Analytical/Logical**

04 Hours

Cause & Effect statements, Scenario based guestions, Figure series & mathematical puzzles, Statement & assumption, Reasoning analogies, Tables, bar charts, Line graphs & Pie charts, Data sufficiency.

# **UNIT-III**

**Verbal** 03 Hours

Sentence corrections (Pronoun errors & misplaced modifiers, Parallel construction & Parallel Comparison, Tense usage, Subject-verb agreement), Verbal analogies, Reading comprehension (simple passage, difficult passage), Inferences from passages.

#### **Course Outcomes:** At the end of the course student will be able to

1.	Answer the quantitative multiple-choice questions.
2.	Analyse the analytical and logical questions.
3.	Improve the professional language grammar, vocabulary and communication skills.
4.	Clear the aptitude tests of any employer or higher educational institution.
5.	Advance in the chosen field of interest by appending aptitude skills with the technical skills

ENGINEERING PROJECT MANAGEMENT								
Course Code:	MG1001-1	Course Type	PEC					
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03					
Total Teaching Hours	40	CIE + SEE Marks	50+50					

#### **Teaching Department: Civil Engineering**

#### **Course Objectives:**

- Understand various organizational forms/structures Bar charts, Milestone charts and Work breakdown structure. Have the knowledge of Activity, Event, Different type of floats, Forward pass, Backward pass. Construction of network diagrams, determine activity start and finish times. Know about 2.
- CPM, the project management tool
- Know three-time estimates referring to PERT, Scheduling, Monitoring and Updating. 3. Resource Planning-leveling and allocation.
- Acquire the knowledge of Cost control in construction, Linear programming, Transportation 4. models.
- Know about Material Management, Store management, Purchase management and Inventory control management.

#### **UNIT-I**

## **Project Organization**

07 Hours

Project Organization, Formal and Informal organization, Organization Structures, Bar chart, Milestone chart, Work Breakdown Structure, Cost breakdown structure. Activity and event, Activity start and finish times, Forward and backward pass, Floats - Definition, Different types.

Line and staff organizations, AON & AOA diagrams.

#### **Project Planning**

09 Hours

Network Analysis, Construction of network diagrams using predecessor relationships, Fulkerson's rule of numbering events, CPM Analysis – Significance.

Determination of Earliest and Latest Event Times, Critical Path and various floats.

#### UNIT-II

# **Project Monitoring**

06 Hours

PERT Analysis - Importance, Time Estimates-Optimistic time, Pessimistic time, most likely time, Scheduling, Monitoring and Updating. Line of Balance Scheduling.

Resource Planning-leveling Allocation, Introduction to Risk Management, Risk Register.

#### **Project Control**

08 Hours

Project cost analysis, Time-Cost Trade-off. Cost Control in Construction, Linear programming-Graphical method. Theory of simplex method, Transportation models

#### **UNIT-III**

# **Material Management**

10 Hours

Material Management- Scope, objectives and functions, Store Management-Objectives and functions, Purchase management and inventory control Management.

**Course Outcomes:** At the end of the course student will be able to

To **develop** bar charts, milestone charts and WBS To **analyze** and **solve** problems on activities and events 2. 3. To **determine** the project completion period and to **estimate** the probability of completing the project within the specified period. To **optimize** the project cost and duration by time cost trade off method 4. 5. To **apply** the knowledge to procure and manage material for the project.

MANAGEMENT & ENTREPRENEURSHIP									
Course Code:	MG1003-1	Course Type	HSMC						
Teaching Hours/Week (L: T: P: S)	3:0:0:0	Credits	03						
Total Teaching Hours	40	CIE + SEE Marks	50+50						

# **Teaching Department: Any**

# **Course Objectives:**

- To introduce the field of management, task of the manager, importance of planning and types of planning, staff recruitment and selection process.
   To discuss the ways in which work is allocation, structure of organizations, modes of
- communication and need of coordination between the manager and staff
- **3.** To explain the role and importance of the entrepreneur and their functions in economic development and the concepts of entrepreneurship.
- **4.** To discuss the importance of Small-Scale Industries and methods for generating new business ideas and business opportunities
- **5.** To introduce the concepts of financial concepts in enterprises.

#### **UNIT-I**

Management: 03 Hours

Definition, Importance – Nature and Characteristics of Management, Management Functions, Roles of Manager, Levels of Management, Managerial Skills, Management & Administration, Management as a Science, Art & Profession.

Planning: 03 Hours

Nature, Importance and Purpose of Planning, Types of Plans, Steps in Planning, Limitations of Planning, Decision Making – Meaning, Types of Decisions- Steps in Decision Making.

# **Organizing and Staffing**

04 Hours

Meaning, Nature and Characteristics of Organization – Process of Organization, Principles of Organization, Departmentalization, Committees – meaning, Types of Committees, Centralization Versus Decentralization of Authority and Responsibility, Span of Control (Definition only), Nature and Importance of Staffing, Process of Selection and Recruitment.

# **Directing and Controlling**

04 Hours

Meaning and Nature of Directing-Leadership Styles, Motivation Theories Communication – Meaning and Importance, Coordination- Meaning and Importance, Techniques of Coordination. Controlling – Meaning, Steps in Controlling

#### **UNIT-II**

# **Social Responsibilities of Business:**

03 Hours

Meaning of Social Responsibility, Social Responsibilities of Business towards Different Groups, Social Audit, Business Ethics, and Corporate Governance.

# **Entrepreneurship**

05 Hours

Definition of Entrepreneur, Importance of Entrepreneurship, concepts of Entrepreneurship, Characteristics of successful Entrepreneur, Classification of Entrepreneurs, Intrapreneur – An Emerging Class, Comparison between Entrepreneur and Intrapreneur, Myths of Entrepreneurship, Entrepreneurial Development models, Entrepreneurial development cycle, Problems faced by Entrepreneurs and capacity building for Entrepreneurship.

# **Modern Small Business Enterprises**

05 Hours

Role of Small Scale Industries, Concepts and definitions of SSI Enterprises, Government policy and development of the Small Scale sector in India, Growth and Performance of Small Scale Industries in India, Sickness in SSI sector, Problems for Small Scale Industries, Impact of Globalization on SSI, Impact of WTO/GATT on SSIs, Ancillary Industry and Tiny Industry (Definition only).

# **Institutional Support for Business Enterprises**

02 Hours

Introduction, Policies & Schemes of Central-Level Institutions, State-Level Institutions

#### **UNIT-III**

#### **Finance Management in enterprises**

10 Hours

Introduction, functions, Accounting and Bookkeeping, Financial Statements, Working Capital Management, Break even Analysis, Financial ratio Analysis.

Course Outcomes: At the end of the course student will be able to

- **1.** Describe the field of management, the task of the manager, planning, and steps in decision making.
- **2.** Discuss the structure of the organization, importance of staffing, leadership styles, modes of communication, techniques of coordination, and importance of managerial control in the business.
- **3.** Describe the concepts of entrepreneurship and a businessman's social responsibilities towards different groups.
- **4.** Develop an understanding of the role of SSI's in the development of country and state/central level institutions/agencies supporting business enterprises.
- **5.** Apply the concepts of financial management for effective use in enterprises

ESSENCE	OF INDIAN (	CULTURE	
Course Code:	HU1005-1	Course Type:	HEC
Teaching Hours/Week (L: T: P: S):	1:0:0:0	Credits:	01
<b>Total Teaching Hours:</b>	15	CIE + SEE Marks:	50+50

# **Teaching Department: Respective Department**

# **Course Objectives:**

- **1.** To facilitate students with the concepts of Indian Culture and to make them understand the roots of knowledge system.
- 2. To acquaint students with Indian Culture and inculcate an ability to analyze it.
- **3.** To apply various approaches for the enhancement of living ideals based on Indian traditional knowledge.

#### **UNIT-I**

# **Introduction to Traditional Knowledge**

6 Hours

Define traditional knowledge, nature and characteristics, scope and importance, kinds of traditional knowledge, Indigenous Knowledge and its characteristics, Traditional Knowledge vis-a-vis Indigenous Knowledge, Traditional Knowledge vis-a-vis Western Knowledge

#### **UNIT-II**

# **Significance of Traditional Knowledge**

6 Hours

Value of Traditional Knowledge in global economy, Role of Government in harnessing Traditional Knowledge, Traditional medicine system, Traditional Knowledge in agriculture. food and healthcare.

#### **UNIT-III**

## **Holistic Healthcare for Human Well-being**

3 Hours

Definition of Ayurveda, Ayurveda for Life, Health and Well-being, Introduction to principles of Ayurvedic healing and Astanga Ayurveda.

#### Course Outcomes: At the end of the course student will be able to

- 1. Identify the concept of Traditional Knowledge and its importance.
- 2. Explain the need for and importance of protecting Traditional Knowledge.
- **3.** Illustrate the various enactments related to Traditional Knowledge.
- **4.** Familiarize the importance of Holistic Healthcare.

# **Teaching Department: Respective Department**

# **Course Objectives:**

- **1.** Enhance knowledge about the History of Ancient India and Rich Culture of the country
- **2.** Gain an introduction to ancient Indian Engineering Technology and Architecture
- **3.** Familiarize Indian indigenous wisdom in Modern scientific paradigm
- **4.** Understanding the Scientific Value of the Traditional Knowledge of our country
- **5.** Comprehend and compare the Ancient and Current Knowledge Systems

#### **UNIT-I**

# Indian History 6 Hours

History - Land, Environment, and people in Ancient India; Ancient Education System, Takşaśilā and Nālandā University, Hunting to Agriculture; Introduction to Vedas and Upanishads; Great Indian Epics; Indian Festivals

#### **UNIT-II**

# **Engineering, Technology, and Architecture**

6 Hours

Pre-Harappan and Sindhu Valley Civilization, Laboratory and Apparatus, Juices, Dyes, Paints and Cements, Glass and Pottery, Metallurgy, Engineering Science and Technology in the Vedic Age and Post-Vedic Records, Iron Pillar of Delhi, Rakhigarhi, Mehrgarh, Sindhu Valley Civilization, Marine Technology

## **UNIT-III**

#### Science, Astronomy, and Mathematics

3 Hours

Concept of Matter, Life and Universe, Gravity, Sage Agastya's Model of Battery, Velocity of Light, Vimāna: Aeronautics, Vedic Cosmology and Modern Concepts, History and Culture of Astronomy, Sun, Earth, Moon, Eclipses, Rotation of Earth, Concepts of Zero and Pi, Number System, Pythagoras Theorem and Vedic Mathematics.

#### Course Outcomes: At the end of the course student will be able to

1.	Understand the relevance of studying history
2.	Comprehend the origin of Vedas and epics
3.	Realize the scientific value of the Traditional Knowledge of India
4.	Converting the Bhāratīya wisdom into the applied aspect of the modern scientific
	paradigm
5.	Preserve and disseminate Indian Knowledge Systems in Research and Societal
	applications

# UNIVERSITY CORE COURSES

	INTERNSHIP-I		
Course Code	UC1001-1	CIE Marks	100
Teaching Hours/Week (L: T: P: S)	-	SEE Marks	-
Total Hours of Pedagogy	80-90 Hours (During I/II semesters)	Total Marks	(Evaluation in I/II/III Semester and grades earned shall be included in IV Semester grade card)
Credits	2	Exam Hours	

# **Course objective**

1. This course is meant to provide students an opportunity to be involved in Inter/ Intra Institutional Activities viz; Training with higher Institutions; Soft skill training organized by Training and Placement Cell of the institution; contribution at incubation/ innovation/entrepreneurship cell of the institution; participation in conferences/ workshops/competitions etc.; Learning at Departmental Lab/ Tinkering Lab/ Institutional workshop; Working for consultancy/ research projects within the institution and Participation in all the activities of Institute's Innovation Council.

# Activities: Refer Appendix B - 3.4 for details

#### **Course outcomes**

- **1.** Experience the working in Inter / Institutional activities
- 2. Work in teams and communicate efficiently both written and oral.
- **3.** Develop the ability to do work in different activities, which will provide the necessary understanding and contribute to the same and provide a foundation to undergo higher level training in subsequent internships.

Prerequisite			

# **Course Objectives:**

**1.** This course is meant to provide students an avenue to understand the work environment, ethics and practices in an industry/organization and take up assignments/jobs in the future.

# Course Outcomes: At the end of the course student will be able to

- **1.** Analyse and Develop technical solutions for a specific problem that is assigned to them.
- **2.** Communicate ideas that are developed through brainstorming, presentation and prepare a report.
- **3.** Understand and inculcate industry practices in their professional career.

Teaching Hours/Week (L: T: P: S):	24	Credits:	2+8
Total Teaching Hours:	-	CIE + SEE Marks:	(100+0) + 100+100

# **Course Objectives:**

1	To perform effective literature survey, identification of research problem / project
1.	idea.
2.	To develop skills of planning to execute the project
3.	To assess the needs and necessity of a project.
4.	To learn time management and documentation.
_	To expose the students to research aspects like literature review, executing
5.	experiments and analysis of results.
6	To expose the students to research aspects like literature review, executing
6.	experiments and analysis of results.

A group of students (not more than 4) is assigned to a guide/project supervisor. The students must do a thorough literature review and come out with a project plan. They are expected submit a project proposal (not more than 10 pages) including project idea, protocols, designs (if any), expected outcome, major requirements, and approximate budget. They shall present the same in a proposal seminar in front of the panel of internal examiners (involving guide) and shall get their proposal approved. The presentation must involve projected timeline of the project execution.

# **Assessment Details (both CIE and SEE)**

CIE procedure: Shall involve project proposal, proposal seminar, continuous evaluation of the project progress by Guide and HOD. Monthly progress is evaluated.

Semester End Examination:

#### SEE procedure:

- i)Single discipline: Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted at the department.
- ii) Interdisciplinary: Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted separately at the departments to which the student/s belong to.

#### SCHEME OF EVALUATION:

Project demonstration, Viva voce

Total marks: 100 Marks

The distribution of marks shall be proportioned based on the type of the project and it is based on fulfilling the following requisites.

The evaluation of students is proposed to be done by internal faculty with active involvement of industrial personnel. The evaluation may be based on following criteria:

- Punctuality and Attendance "Interpersonal relations
- Sense of Responsibility
- Clarity of concepts, principles and procedures
- Self-expression/communication skills
- Report Writing Skills
- Creativity/conceiving new and unusual ideas
- Problem-solving skills

At the end of the project work course students are required to submit a working model of the equipment they have designed and developed or if it is a theoretical or experimental work, they are expected to study a detailed analysis and findings from their work.

# Course Outcomes: At the end of the course student will be able to

1.	Use various methods or sources for finding literature and analyze data for relevance and appropriateness to the research project undertaken.
2.	Identify and propose suitable methods of analysis and/or design or develop appropriate experiments to address the specific research objectives.
3.	Apply suitable standardized method/s for experimental design.
4.	Analyze and interpret the research findings and compare with reported results to arrive at suitable conclusions.
5.	Adopt appropriate documentation protocol to organize research findings, learn good laboratory practices and work in a team.
